BlackBerry Enterprise Server Express for Microsoft Exchange
Version: 5.0 | Service Pack: 3
Administration Guide
# Contents

1 Overview: BlackBerry Enterprise Server Express
   Getting started in your BlackBerry Enterprise Server Express environment
   
2 Log in to the BlackBerry Administration Service for the first time
   There is a problem with this website's security certificate
   This connection is untrusted
   
3 Creating administrator accounts
   Administrative roles and permissions
   Preconfigured administrative roles
   Create an administrator account
   Add an administrator account to a group
   Specify an email address for the BlackBerry Administration Service
   Permit an administrator to log in to the BlackBerry Administration Service using a messaging server account
   Assign a BlackBerry device to an administrator account
   
4 Using an IT policy to manage BlackBerry Enterprise Solution security
   Using IT policy rules to manage BlackBerry Enterprise Solution security
   Default IT policy
   Creating IT policies
   Create an IT policy
   Create an IT policy based on an existing IT policy
   Change the value for an IT policy rule
   Assign an IT policy to a group
   Assign an IT policy to a user account
   Sending an IT policy over the wireless network
   Resend an IT policy to a BlackBerry device manually
   Resend an IT policy to a BlackBerry device automatically
   Assigning IT policies and resolving IT policy conflicts
   Option 1: Applying one IT policy to each user account
   Option 2: Applying multiple IT policies to each user account
   View the resolved IT policy rules that are assigned to a user account
   Deactivating BlackBerry devices that do not have IT policies applied
   Deactivate BlackBerry devices that do not have IT policies applied
   Creating new IT policy rules to control third-party applications
   Create an IT policy rule for a third-party application
   Change or delete IT policy rules for third-party applications
5 Configuring security options........................................................................................................ 42
   Encrypting data that the BlackBerry Enterprise Server Express and a BlackBerry device send to each other. 42
      Algorithms that the BlackBerry Enterprise Solution uses to encrypt data........................................ 42
      Change the symmetric key encryption algorithm that the BlackBerry Enterprise Solution uses........... 42
   Managing BlackBerry device access to the BlackBerry Enterprise Server Express................................. 43
      Turn on the Enterprise Service Policy.......................................................................................... 43
      Configure the Enterprise Service Policy.................................................................................. 44
      Permit a user to override the Enterprise Service Policy............................................................... 44
   Extending messaging security to a BlackBerry device........................................................................ 44
      Extending messaging security using PGP encryption..................................................................... 45
      Extending messaging security using S/MIME encryption.............................................................. 45
   Generating organization-specific encryption keys for PIN-message encryption.................................... 48
      Generate a PIN encryption key.................................................................................................... 48
   Turn off BlackBerry services that the BlackBerry MDS Connection Service provides............................ 48

6 Configuring the BlackBerry Enterprise Server Express environment................................................ 50
   Best practice: Running the BlackBerry Enterprise Server Express..................................................... 50
   Configuring the BlackBerry MDS Connection Service to use a proxy server....................................... 50
      Configure the BlackBerry MDS Connection Service to use a .pac file........................................ 51
      Configure the BlackBerry MDS Connection Service to authenticate to a proxy server on behalf of BlackBerry devices.................................................................................................................. 52
   Configuring the BlackBerry Administration Service to use a proxy server......................................... 53
      Configuring proxy selection for the BlackBerry Administration Service........................................ 53
      Configuring the BlackBerry Administration Service to authenticate with a proxy server............... 55
   Configuring multiple BlackBerry Enterprise Server Express instances to use the same BlackBerry MDS Connection Service.............................................................................................................. 57
      Configure multiple BlackBerry Enterprise Server Express instances to use the same BlackBerry MDS Connection Service.............................................................................................................. 57
   Configuring support for Unicode languages..................................................................................... 57
      Configure support for Unicode languages..................................................................................... 57
      Change the character encoding that the BlackBerry Enterprise Server Express uses to send Unicode messages.................................................................................................................................................. 58
      Configure support for Unicode text in calendars on BlackBerry devices in a Microsoft Exchange environment.................................................................................................................................................. 59

7 Configuring user accounts................................................................................................................ 61
Creating user groups.................................................................................................................. 61
Create a group to manage similar user accounts........................................................................ 61
Add user accounts to a group........................................................................................................ 61
Adding a user account to the BlackBerry Enterprise Server Express........................................... 62
Add a user account....................................................................................................................... 62
Create a user account that is not in the contact list in the BlackBerry Configuration Database........ 63
Export a list of user accounts......................................................................................................... 64
Importing a list of user accounts to a BlackBerry Enterprise Server Express............................... 64

8 Assigning BlackBerry devices to users..................................................................................... 67
Preparing to distribute a BlackBerry device.................................................................................. 67
  Change how the BlackBerry Enterprise Server Express downloads a user’s existing email messages
  onto the BlackBerry device........................................................................................................... 67
  Prevent the BlackBerry Enterprise Server Express from synchronizing existing email messages onto a
  BlackBerry device....................................................................................................................... 67
Identify whether a BlackBerry device is associated with the BlackBerry Internet Service............... 68
Assigning BlackBerry devices to user accounts........................................................................... 68
  Option 1: Activate a BlackBerry device using the BlackBerry Administration Service.................. 69
  Option 2: Activating a BlackBerry device over the wireless network....................................... 70
  Option 3: Activating BlackBerry devices over the LAN............................................................ 73
  Option 4: Activating BlackBerry devices using the BlackBerry Web Desktop Manager................. 74
  Option 5: Activating BlackBerry devices over an enterprise Wi-Fi network............................... 74

9 Sending software and BlackBerry Java Applications to BlackBerry devices............................... 77
Managing BlackBerry Java Applications and BlackBerry Device Software................................... 77
Developing BlackBerry Java Applications for BlackBerry devices................................................. 78
Preparing to distribute BlackBerry Java Applications...................................................................... 78
  Specify a shared network folder for BlackBerry Java Applications............................................. 79
  Add a BlackBerry Java Application to the application repository.............................................. 79
  Specify keywords for a BlackBerry Java Application................................................................. 80
Configuring application control policies....................................................................................... 80
  Standard application control policies.......................................................................................... 80
  Change a standard application control policy........................................................................... 81
  Create custom application control policies for a BlackBerry Java Application.......................... 81
  IT policy rules take precedence on the device............................................................................. 82
Application control policies for unlisted applications.................................................................... 83
  Change the standard application control policy for unlisted applications that are optional........... 83
  Create an application control policy for unlisted applications.................................................. 83
  Configure the priority of application control policies for unlisted applications.......................... 84
Creating software configurations.................................................................................................................... 84
Create a software configuration........................................................................................................................ 85
Add a BlackBerry Java Application to a software configuration........................................................................ 86
Assign a software configuration to a group......................................................................................................... 86
Assign a software configuration to multiple user accounts.................................................................................. 87
Assign a software configuration to a user account.............................................................................................. 87
Install BlackBerry Java Applications on a BlackBerry device at a central computer........................................ 88
View the status of a job........................................................................................................................................ 88
View the status of a task....................................................................................................................................... 89
Stopping a job that is running............................................................................................................................. 97
Stop a job that is running.................................................................................................................................... 97
View the users that have a BlackBerry Java Application installed on their BlackBerry devices....................... 98
View how the BlackBerry Administration Service resolved software configuration conflicts for a user account.................................................................................................................................................. 98
Reconciliation rules for conflicting settings in software configurations.............................................................. 99
  Reconciliation rules: BlackBerry Java Applications....................................................................................... 100
  Reconciliation rules: BlackBerry Device Software......................................................................................... 102
  Reconciliation rules: Standard application settings...................................................................................... 103
  Reconciliation rules: Application control policies.......................................................................................... 104
  Reconciliation rules: Application control policies for unlisted applications.............................................. 104

10 Alternative methods for installing BlackBerry Java Applications on BlackBerry devices.......................... 106
  Installing BlackBerry Java Applications on BlackBerry devices without using the BlackBerry Administration Service.......................................................................................................................................................... 106
  Developing BlackBerry Java Applications for BlackBerry devices................................................................ 106
  Methods you can use to install BlackBerry Java Applications on BlackBerry devices..................................... 106
  Installing BlackBerry Java Applications using the BlackBerry Desktop Software............................................ 107
    Prerequisites: Installing BlackBerry Java Applications using the BlackBerry Desktop Software.................. 108
    Make the BlackBerry Java Application available to the BlackBerry Desktop Software.............................. 108
    Install the BlackBerry Java Application using the BlackBerry Desktop Software...................................... 109
  Installing BlackBerry Java Applications using the BlackBerry Application Web Loader................................ 109
    Prerequisites: Installing BlackBerry Java Applications using the BlackBerry Application Web Loader........... 109
    Enable the BlackBerry Application Web Loader on a web server.............................................................. 110
    Install the BlackBerry Java Application using the BlackBerry Application Web Loader........................... 111
  Installing BlackBerry Java Applications using the standalone application loader tool.................................... 111
    Prerequisites: Installing BlackBerry Java Applications using the standalone application loader tool............ 112
    Add BlackBerry Java Application files to a shared network folder............................................................. 112
    Share the Research In Motion folder that contains the BlackBerry Java Application.................................... 113
Configure the standalone application loader tool to install the BlackBerry Java Application in automated mode........................................................................................................................................... 113
Install the BlackBerry Java Application using the standalone application loader tool................................................................. 113
Installing BlackBerry Java Applications using a web browser on BlackBerry devices.......................................................... 114
   Prerequisites: Installing BlackBerry Java Applications using a web browser on BlackBerry devices........... 114
   Install the BlackBerry Java Application on a web server...................................................................................... 115
   Install the BlackBerry Java Application using a web browser on the BlackBerry device............. 115

11 Configuring how users access enterprise applications and web content................................................................................. 116
   Specifying a BlackBerry MDS Connection Service as a central push server................................................................. 116
   Specify a BlackBerry MDS Connection Service as a central push server.............................................................. 116
   Configuring how BlackBerry devices authenticate to content servers.............................................................. 117
   Configure how BlackBerry devices authenticate to content servers.............................................................. 117
   Configure the BlackBerry MDS Connection Service to authenticate BlackBerry devices to content servers that use NTLM................................................................................................................................................................................................. 117
   Configure the BlackBerry MDS Connection Service to authenticate BlackBerry devices to content servers that use Kerberos................................................................................................................................................................................................. 118
   Configure the BlackBerry MDS Connection Service to authenticate BlackBerry devices to content servers that use LTPA................................................................................................................................................................................................. 118
   Configuring the BlackBerry MDS Connection Service to authenticate devices to the RSA Authentication Manager......................................................................................................................................................................................... 119
   Configuring how the BlackBerry MDS Connection Service manages requests for web content................................. 120
   Configure the BlackBerry MDS Connection Service to manage HTTP cookie storage.................................................. 121
   Configure the timeout limit for HTTP connections with BlackBerry devices.......................................................... 121
   Configure the timeout limit for HTTP connections with web servers.................................................................................. 121
   Configure the maximum number of times that the BlackBerry Browser accepts HTTP redirections.............. 122
   Permitting push applications to make trusted connections to a BlackBerry MDS Connection Service........ 122
   Create a key store to store certificates for use with HTTPS connections............................................................... 122
   Add a certificate for the BlackBerry MDS Connection Service.................................................................................. 123
   Export the BlackBerry MDS Connection Service certificate to make it available to push applications.... 123
   Import the BlackBerry MDS Connection Service certificate to the key store of a push application...... 124
   Configuring a BlackBerry MDS Connection Service to trust web servers................................................................. 124
   Specify whether the BlackBerry MDS Connection Service requires trusted HTTPS connections from web servers................................................................................................................................................................. 124
   Specify whether the BlackBerry MDS Connection Service requires trusted TLS connections from web servers................................................................................................................................................................................................. 125
   Configuring certificate server information for the BlackBerry MDS Connection Service...................................... 126
   Add a retrieved certificate for a web server to the key store.................................................................................. 131
   Permitting users to access intranet sites on BlackBerry devices using global login information.................. 132
Configure global login information for intranet site access

Configuring how the BlackBerry MDS Connection Service connects to BlackBerry devices

Specify the maximum amount of data that a BlackBerry MDS Connection Service can send to BlackBerry devices

Specify the pending content timeout limit for a BlackBerry MDS Connection Service

Permit Java applications to use scalable socket connections with a BlackBerry MDS Connection Service

Specify the thread pool size of a BlackBerry MDS Connection Service

Specify the maximum number of scalable socket connections

Prevent the BlackBerry MDS Connection Service from using scalable HTTP

Specify the port number that the web server listens on for push application requests

Specify how often a BlackBerry MDS Connection Service polls for configuration information

12 Setting up the messaging environment

Creating email message filters

Create an email message filter that applies to all user accounts on a BlackBerry Enterprise Server Express

Turn on an email message filter that applies to all user accounts on a BlackBerry Enterprise Server Express

Create an email message filter that applies to a specific user account

Turn on an email message filter that applies to a specific user account

Copying existing email message filters to another BlackBerry Enterprise Server Express

Export email message filters for a BlackBerry Enterprise Server Express

Import email message filters for a BlackBerry Enterprise Server Express

Copying existing email message filters to user accounts

Export email message filters for a user account

Import email message filters for a user account

Extension plug-ins for processing messages

Install an extension plug-in application

Add an extension plug-in to a BlackBerry Messaging Agent

Change how a BlackBerry Messaging Agent uses extension plug-ins

Mapping contact information fields for synchronization and contact lookups

Map a contact information field in an email application to a contact list field on BlackBerry devices

Map a contact list field in an email application to a contact list field on a BlackBerry device

Map a contact information field in an email application to contact list fields on BlackBerry devices

Map a contact list field in an email application to a contact list field on a BlackBerry device

13 Making the BlackBerry Web Desktop Manager available to users

Installing the client components of the BlackBerry Web Desktop Manager on users' computers
14 Configuring the BlackBerry Web Desktop Manager

15 Creating and configuring Wi-Fi profiles and VPN profiles

Publish the client files for the BlackBerry Web Desktop Manager in a Windows GPO for Windows XP

Publish the client files for the BlackBerry Web Desktop Manager in a Windows GPO for Windows Vista

Configure the Microsoft ActiveX Installer on Windows Vista

Configure users' computers to install the client file for the BlackBerry Web Desktop Manager automatically

Make the BlackBerry Web Desktop Manager available to users

Permit users to perform administrative tasks using the BlackBerry Web Desktop Manager

Permit users to create activation passwords using the BlackBerry Web Desktop Manager

Permit users to activate BlackBerry devices using the BlackBerry Web Desktop Manager

Permit users to back up and restore data using the BlackBerry Web Desktop Manager

Configure the domains for backing up data using the BlackBerry Web Desktop Manager

Change the text colors in the BlackBerry Web Desktop Manager

BlackBerry Web Desktop Manager text colors

Display a custom image in the BlackBerry Web Desktop Manager

Display the domain name on the login page of the BlackBerry Web Desktop Manager

Creating and configuring Wi-Fi profiles

Creating and configuring Wi-Fi profiles and VPN profiles

Create a Wi-Fi profile

Create a Wi-Fi profile based on an existing Wi-Fi profile

Configure a Wi-Fi profile on a BlackBerry device

Assign a Wi-Fi profile to a group

Assign a Wi-Fi profile to a user account

Configure a Wi-Fi profile

Creating and configuring VPN profiles

Create a VPN profile

Create a VPN profile based on an existing VPN profile

Configure a VPN profile

Assign a VPN profile to a group

Assign a VPN profile to a user account

Associate a VPN profile with a Wi-Fi profile

Delete a Wi-Fi profile

Delete a VPN profile

Importing profile information from a .csv file

Best practices: Creating a .csv file that contains profile information that you want to import

Create a .csv file that contains profile information that you want to import

</table>
Configuring single sign-on authentication for the BlackBerry Administration Service and BlackBerry Web Desktop Manager ................................................................. 184
Configure constrained delegation for the Microsoft Active Directory account to support single sign-on authentication .............................................................................. 184
Turn on single sign-on authentication for the BlackBerry Administration Service .................................................. 184
BlackBerry Administration Service web addresses and BlackBerry Web Desktop Manager web addresses that support BlackBerry Administration Service single sign-on ................................................................. 185
Changing password settings for BlackBerry Administration Service authentication .................................................. 185
Change password settings for BlackBerry Administration Service authentication ................................................................. 186
Regenerate the system credentials for the BlackBerry Administration Service ................................................................. 186

19 Protecting and redistributing devices ................................................................................................................. 187
Preparing a device for redistribution to a new user ................................................................................................. 187
Use the BlackBerry Administration Service to delete user data and assign the device to a new user .... 187
Use the BlackBerry Administration Service to delete user data and remove the BlackBerry Device Software before assigning the device to a new user ................................................................. 187
Deleting only work data from a device ............................................................................................................. 188
Delete only work data from a device ............................................................................................................. 189
Using IT administration commands to protect a lost or stolen device ................................................................. 190
Protect a stolen device ......................................................................................................................................... 191
Protect a lost device ........................................................................................................................................... 192
Protect a lost device that a user might not recover ................................................................................................. 192

20 Managing administrator accounts .......................................................................................................................... 194
Change the roles for an administrator account ................................................................................................. 194
Delete a role ......................................................................................................................................................... 194
Delete an administrator account .......................................................................................................................... 194

21 Managing groups and user accounts .................................................................................................................. 196
Managing groups ..................................................................................................................................................... 196
Using default groups to manage user accounts and administrator accounts ................................................................. 196
Remove a user account from a group .................................................................................................................. 197
Change the properties of a group .................................................................................................................. 197
Rename a group ..................................................................................................................................................... 197
Delete a group ..................................................................................................................................................... 198
Managing user accounts ......................................................................................................................................... 198
Move a user account to a different group ............................................................................................................. 198
Move a user account from one BlackBerry Enterprise Server Express to another ................................................................. 199
Delete a user account from the BlackBerry Enterprise Server Express ............................................................................................................. 199
22 Managing the delivery of BlackBerry Java Applications, BlackBerry Device Software, and device settings to BlackBerry devices .......................................................... 201
   Managing the default distribution settings for jobs .......................................................... 201
      Change default settings for a job schedule .................................................................... 201
      Change how IT policies are sent to BlackBerry devices .................................................. 202
      Change how to install, update, or remove BlackBerry Java Applications ......................... 203
      Change how to install or update the BlackBerry Device Software .................................. 204
      Change how the BlackBerry Enterprise Server Express sends standard application settings to BlackBerry devices .......................................................... 205
   Managing the distribution settings for a specific job ......................................................... 206
      Specify the start time and priority for a job .................................................................... 207
      Change how a job sends IT policies to BlackBerry devices .............................................. 207
      Change how a job sends BlackBerry Java Applications to BlackBerry devices .................. 208
      Change how a job sends the BlackBerry Device Software to BlackBerry devices ............... 209
      Change how a job sends standard application settings to BlackBerry devices ................. 211
   Managing BlackBerry Java Applications on BlackBerry devices ........................................ 212
      Make a BlackBerry Java Application unavailable for installation ................................... 212
      Remove a BlackBerry Java Application from BlackBerry devices over the wireless network .......................................................... 212
   Managing software configurations .................................................................................... 213
      Remove a software configuration from a group .............................................................. 213
      Remove a software configuration from multiple user accounts ....................................... 213
      Remove a software configuration from a user account ................................................... 214
      Delete a software configuration ..................................................................................... 214

23 Managing how users access enterprise applications and web content ........................................ 215
   Restricting user access to content on web servers ............................................................. 215
      Restrict requests for content on web servers from BlackBerry devices ............................. 215
      Specify web address patterns ....................................................................................... 215
      Create a pull rule .......................................................................................................... 216
      Restrict or permit web addresses and Intranet addresses using a pull rule ....................... 216
      Assign a pull rule to the members of a group .................................................................. 217
      Assign a pull rule to user accounts ............................................................................... 218
   Restricting user access to media content in the BlackBerry Browser .................................... 218
      Prevent users from accessing specific media types ......................................................... 218
Configure download limits for media content types

Default download limits for media content types

Configuring Integrated Windows authentication so that users can access resources on your organization's network

Configuring the Microsoft Active Directory account to delegate access

Configuring the BlackBerry MDS Connection Service when the messaging server is located in a remote Microsoft Active Directory domain

Turn on Integrated Windows authentication so that users can access resources on your organization's network

Restricting the push application content that users can receive

Restrict push applications from sending data to BlackBerry devices

Create push initiators for push applications

Turn on push authorization

Create a push rule

Assign push initiators to a push rule

Assign a push rule to the members of a group

Assign a push rule to user accounts

Encrypt push requests that push applications send to BlackBerry devices

Managing push application requests

Specify device ports for application-reliable push requests

Store push application requests in the BlackBerry Configuration Database

Configure the settings for storing push requests in the BlackBerry Configuration Database

Configure the maximum number of active connections that a BlackBerry MDS Connection Service can process

Configure the maximum number of queued connections that a BlackBerry MDS Connection Service can process

Managing organizer data synchronization

Managing the wireless backup and recovery of organizer data

Turn off the wireless backup of organizer data for a user account

Delete organizer data for members of a user group from the BlackBerry Enterprise Server Express

Delete a user's organizer data from a BlackBerry Enterprise Server Express

Turning off organizer data synchronization

Turn off organizer data synchronization for all user accounts that are associated with a BlackBerry Enterprise Server Express

Turn off organizer data synchronization for a specific user account

Changing how organizer data synchronizes

Change the direction of organizer data synchronization for all user accounts on a BlackBerry Enterprise Server Express
Change the direction of organizer data synchronization for a specific user account........................................... 234
Change how the BlackBerry Administration Service resolves conflicts during organizer data synchronization for all user accounts on a BlackBerry Enterprise Server Express........................................... 235
Change how the BlackBerry Administration Service resolves conflicts during organizer data synchronization for a specific user account................................................................................................. 235
Synchronizing contact pictures.......................................................................................................................... 236
Turn off synchronization of contact pictures for a user account......................................................................... 236

25 Managing your organization’s messaging environment and attachment support........................................... 237
Managing message forwarding......................................................................................................................... 237
Forward email messages to a BlackBerry device when no filter rules apply...................................................... 237
Do not deliver email messages to a BlackBerry device when no filter rules apply........................................... 237
Forward email messages from inbox subfolders to a BlackBerry device........................................................... 238
Turn off email message forwarding to user accounts in a group...................................................................... 238
Turn off email message forwarding to a user account.................................................................................... 239
Turn off synchronization for email messages sent from a BlackBerry device.................................................. 239
Turn off email message forwarding when a user connects a BlackBerry device to a computer....................... 240
Managing the incoming message queue.............................................................................................................. 240
Delete email messages for user accounts from the incoming message queue.................................................... 240
Managing wireless message reconciliation........................................................................................................ 241
Turn off wireless message reconciliation for a BlackBerry Enterprise Server Express...................................... 241
Turn on reconciliation for email messages that are hard deleted...................................................................... 241
Managing access to remote message data........................................................................................................ 242
Prevent a user from checking the availability of meeting participants on the BlackBerry device......................... 242
Prevent a user from searching for remote email messages using a device......................................................... 242
Managing email messages that contain HTML and rich content.......................................................................... 243
View whether a user turned on support for email messages that contain HTML and rich content for a BlackBerry device........................................................................................................................................... 243
Turn off support for rich text formatting and inline images in email messages for users on a BlackBerry Enterprise Server Express........................................................................................................................................ 244
Turn off support for rich text formatting in email messages using an IT policy rule.......................................... 245
Synchronizing folders on the BlackBerry device................................................................................................ 245
Control which published public contact folders a user can synchronize to a BlackBerry device....................... 245
Control which personal contact subfolders a user can synchronize to a BlackBerry device.............................. 246
Control which personal mail folders a user can synchronize with a BlackBerry device....................................... 246
Configuring access to documents on remote file systems..................................................................................... 247
Configure the BlackBerry MDS Connection Service to communicate with a remote file system....................... 247
Add communication information to a BlackBerry MDS Connection Service configuration set....................... 248
Assign a BlackBerry MDS Connection Service configuration set to a BlackBerry MDS Connection Service instance................................................................. 249
Managing signatures and disclaimers in email messages................................................................. 250
  Add a signature to email messages that a user sends from a BlackBerry device.......................... 250
  Add a disclaimer to email messages that users send from BlackBerry devices.......................... 250
  Add a disclaimer to email messages that a user sends from a BlackBerry device...................... 251
  Specify conflict rules for disclaimers.......................................................................................... 251
  Turn off disclaimers for email messages.................................................................................. 251
Monitor email messages that users send from BlackBerry devices.................................................. 252
Sending notification messages to users......................................................................................... 253
  Send a notification message to all users in a BlackBerry Domain.............................................. 253
  Send a notification message to all users on a BlackBerry Enterprise Server Express................ 253
  Send a notification message to group members....................................................................... 253
  Send a notification message to a user...................................................................................... 254

Overview: BlackBerry Enterprise Server Express

The BlackBerry® Enterprise Server Express is designed to be a secure, centralized link between an organization’s wireless network, communications software, applications, and BlackBerry devices. The BlackBerry Enterprise Server Express integrates with your organization’s existing infrastructure, which can include messaging software, calendar and contact information, wireless Internet and intranet access, and custom applications, to provide BlackBerry device users with mobile access to your organization’s resources. You can install the BlackBerry Enterprise Server Express on the same server as your organization’s messaging server, or you can install the BlackBerry Enterprise Server Express on a separate server.

The BlackBerry Enterprise Server Express supports devices that are provisioned for a BlackBerry Enterprise Server or for the BlackBerry® Internet Service.

The BlackBerry Enterprise Server Express supports AES and Triple DES encryption to protect and ensure the integrity of wireless data that is transmitted between the BlackBerry Enterprise Server Express components and devices. You can configure IT policy rules to control the features of the devices that are used in your organization’s environment.

You can manage the BlackBerry Enterprise Server Express, devices, and user accounts using the BlackBerry Administration Service, a web application that is accessible from any computer that can access the computer that hosts the BlackBerry Administration Service. You can use the BlackBerry Administration Service to manage a BlackBerry Domain, which consists of one or more BlackBerry Enterprise Server Express instances and remote components that use a single BlackBerry Configuration Database.

Getting started in your BlackBerry Enterprise Server Express environment

The following table lists the tasks that administrators typically perform after installing a BlackBerry® Enterprise Server Express, and the chapter or section in the BlackBerry Enterprise Server Express Administration Guide that contains the information required to complete the task. Some of the tasks might not be required in your organization’s environment.

Log in to the BlackBerry Administration Service for the first time

To open the BlackBerry® Administration Service, you can use a browser on any computer that has access to the computer that hosts the BlackBerry Administration Service.

**Before you begin:** To manage a BlackBerry device using the BlackBerry Administration Service while the BlackBerry device is connected to the computer, the browser must permit Microsoft® ActiveX® controls.

1. In the browser, type **https://<server_name>:<https_port>/webconsole/app**, where `<server_name>` is the name of the computer that hosts the BlackBerry Administration Service.
2. In the **User name** field, type `admin`.
3. In the **Password** field, type the password that you created during the installation process.
4. In the **Log in using** drop-down list, click **BlackBerry Administration Service**.
5. Click **Log in**.

**Related topics**

*Best practice: Running the BlackBerry Enterprise Server Express, 50*
*The web browser displays an HTTP 404 or HTTP 504 error message when it tries to connect to a BlackBerry Administration Service instance, 335*

There is a problem with this website's security certificate

**Description**

The browser displays this error message when you try to navigate to the BlackBerry® Administration Service using Windows® Internet Explorer® version 7 or later.

**Possible solution**

Add the web address for the BlackBerry Administration Service to the list of trusted web sites in Windows Internet Explorer, and install the certificate for the BlackBerry Administration Service in the certificate store of your computer.

1. In Windows Internet Explorer, navigate to the BlackBerry Administration Service console.
2. Click **Continue to this website (not recommended)**.
3. On the **Tools** menu, click **Internet Options**.
4. On the **Security** tab, click **Local Intranet**.
5. Click **Sites**.
6. Click **Add** to add the console to the list of trusted web sites.
7. Click **Close**.
8. Click **OK**.
9. In the browser window, on the toolbar, click **Certificate Error**.
10. Click **View certificates**.
11. Click **Install certificate**. The Certificate Import Wizard opens.

12. Complete the instructions in the Certificate Import Wizard. If you are trying to log in to the BlackBerry Administration Service using a computer that runs Windows Vista®, perform the following actions in the Certificate Import Wizard.
   a. In the Certificate Store dialog box, click **Place all certificates in the following store**.
   b. Click **Browse**.
   c. Click **Trusted Root Certification Authorities**.
   d. Click **OK**.

13. Close and reopen the browser.

**This connection is untrusted**

**Description**

The browser displays this error message when you try to navigate to the BlackBerry® Administration Service using Mozilla® Firefox® 3.6.

**Possible solution**

Install the certificate for the BlackBerry Administration Service in the certificate store of your computer.

1. In Firefox, navigate to the BlackBerry Administration Service console.
2. Click **I Understand the Risks**.
3. Click **Add Exception**.
4. Click **Confirm Security Exception**.
5. Close and reopen the browser.
Creating administrator accounts

Administrative roles and permissions

You assign roles to administrator accounts so that you can control who can perform tasks on the BlackBerry® Enterprise Server Express.

You can assign multiple roles to administrator accounts. If you assign multiple roles to an administrator account, the administrator is assigned all the permissions that are turned on for each of the roles.

You can also assign roles to groups and add administrator accounts to groups. This allows you to specify administrative role permissions at a group level instead of at an individual level. If the group contains BlackBerry device users, the roles are also assigned to the users and the users become administrators.

Preconfigured administrative roles

The BlackBerry® Enterprise Server Express installation process includes preconfigured administrative roles. You can use the preconfigured administrative roles in your organization’s environment instead of creating customize administrative roles. Each preconfigured administrative role contains multiple permissions that are turned on. The preconfigured administrative roles make sure that users that do not have specific administrative permissions cannot escalate their permissions. For example, junior helpdesk administrators cannot escalate their roles to senior helpdesk administrator roles. You can configure additional permissions in the preconfigured administrative roles or turn off any of the permissions.

Create an administrator account

You create an account for administrators to enable them to log in to the BlackBerry® Administration Service and manage the BlackBerry® Enterprise Server Express. You create an administrator account and assign the account to one or more administrator roles. The roles control the actions that an administrator can perform in the BlackBerry Administration Service.

If your environment includes a Microsoft® Exchange resource forest, you must create the administrator account in the resource forest.

**Before you begin:** Verify that you can configure the authentication type and roles for an administrator account.

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **Administrator user**.
2. Click **Create an administrator user**.
3. Type the required information.
4. In the **Role** drop-down list, click the role that you want to assign to the administrator account.
5. Click **Create an administrator user**.

**After you finish:** To configure the administrator account, provide the login information to the administrator and add the administrator account to a group or assign additional roles to the administrator account.

Managing administrator accounts, 194
Assigning BlackBerry devices to user accounts, 68

Add an administrator account to a group

When you add an administrator account to one or more groups, you can manage role permissions at a group level instead of at an individual level. If you use groups to manage administrator roles and administrator accounts in your organization's environment, you can add multiple administrator accounts to specific groups and assign the appropriate roles to each group.

**Note:** If you add a role to a group, all accounts in the group become administrator accounts and have all of the permissions that are assigned to that role, even if the accounts are user accounts for BlackBerry® device users.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for an administrator account.
4. In the search results, click the display name for the administrator account.
5. Click **Edit user**.
6. On the **Groups** tab, in the **Available groups** list, click the group that you want to add the administrator account to.
7. Click **Add**.
8. Click **Save all**.

**Related topics**
Create a group to manage similar user accounts, 61

### Specify an email address for the BlackBerry Administration Service

You can specify the email address that the BlackBerry® Administration Service sends BlackBerry® Enterprise Server Express system messages or activation passwords from.

**Before you begin:** Create an email account on your organization's messaging server.

1. In the BlackBerry Administration Service, on the **Devices** menu, expand **Wireless activations**.
2. Click **Device activation settings**.
3. Click **Edit activation settings**.
4. In the **Sender address** field, type the email address that you want the BlackBerry Administration Service to send system messages or activation passwords from.
5. Click **Save all**.

### Permit an administrator to log in to the BlackBerry Administration Service using a messaging server account

You can permit an administrator to log in to the BlackBerry® Administration Service using a user name and password for the messaging server.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. In the search results, click the display name for the user account.
5. Click **Edit user**.
6. In the **Authentication type** section, click the **Edit icon**.
7. In the **User information** section, in the **Display name** field, type the user name.
8. In the **Authentication type** section, type and verify a password.
9. Click the **Update** icon.
10. Click **Save all**.

### Assign a BlackBerry device to an administrator account

You can assign a BlackBerry® device to an administrator without creating a separate user account.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for an administrator account.
4. Click the display name for the administrator account.
5. In the **BlackBerry Enterprise Server status** list, click **Enable as BlackBerry user**.
6. Search for the messaging server display name or email address of the administrator.
7. Select the check box beside the administrator account.
8. Click **Next**.
9. Click the BlackBerry® Enterprise Server Express that you want to assign the administrator account to.
10. Click **Save all**.
Using an IT policy to manage BlackBerry Enterprise Solution security

You can use an IT policy to control and manage BlackBerry® devices, the BlackBerry® Desktop Software, and the BlackBerry® Web Desktop Manager in your organization's environment. An IT policy consists of multiple IT policy rules that manage the security and behavior of the BlackBerry® Enterprise Solution. For example, you can use IT policy rules to manage the following security features and behaviors of the device:

- encryption (for example, encryption of user data and messages that the BlackBerry® Enterprise Server Express forwards to message recipients) and encryption strength
- use of a password or pass phrase
- protection of user data and device transport keys on the device
- control of device resources, such as the camera or GPS, that are available to third-party applications

The Default IT policy includes IT policy rules that are configured to indicate the default behavior of the device or BlackBerry Desktop Software.

After a device user activates a device, the BlackBerry Enterprise Server Express automatically sends to the device the IT policy that you assigned to the user account or group. By default, if you do not assign an IT policy to the user account or group, the BlackBerry Enterprise Server Express sends the Default IT policy. If you delete an IT policy that you assigned to the user account or group, the BlackBerry Enterprise Server Express automatically re-assigns the Default IT policy to the user account and resends the Default IT policy to the device.

For more information, see the BlackBerry Enterprise Server Express Policy Reference Guide.

Using IT policy rules to manage BlackBerry Enterprise Solution security

You can use IT policy rules to customize and control the actions that the BlackBerry® Enterprise Solution can perform.

To use an IT policy rule on a BlackBerry device, you must verify that the BlackBerry® Device Software version supports the IT policy rule. For example, you cannot use the Disable Camera IT policy rule to control whether a BlackBerry device user can access the camera on the device if the BlackBerry Device Software version does not support the IT policy rule. For information about the BlackBerry Device Software version that is required for a specific IT policy rule, see the BlackBerry Enterprise Server Policy Reference Guide.

If you create a custom IT policy that does not permit users to change their user information on their devices, you can only apply this custom IT policy to devices running BlackBerry Device Software 5.0 or later.

The BlackBerry Administration Service groups the IT policy rules by common properties or by application. Most IT policy rules are designed so that you can assign them to multiple user accounts and groups.
Default IT policy

The BlackBerry® Enterprise Server Express includes a default IT policy. When you install the BlackBerry Enterprise Server Express, the IT policy rules in the default IT policy do not contain any values. If you do not specify a value for an IT policy rule, the default value is used. You can configure and apply the default IT policy to user accounts, or you can create new IT policies and assign the new IT policies to user accounts to control the BlackBerry devices in your organization's environment.

Creating IT policies

Create an IT policy

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Policy.
2. Click Create an IT policy.
3. Type a name and description for the IT policy.
4. Click Save.
5. To configure the IT policy, perform the following actions:
   a. In the IT policy information section, click the IT policy.
   b. Click Edit IT policy.
   c. On a tab for an IT policy group, configure values for the IT policy rules.
   d. Click Save All.

After you finish: For more information, see the BlackBerry Enterprise Server Policy Reference Guide.

Create an IT policy based on an existing IT policy

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Policy.
2. Click Manage IT policies.
3. In the list of IT policies, click the IT policy that you want to copy.
4. Click Copy IT policy.
5. Type a name and description for the new IT policy.
6. Click Save.
7. To change the IT policy settings, perform the following actions:
   a. In the IT policy information section, click the IT policy.
   b. Click Edit IT policy.
   c. On a tab for an IT policy group, change the appropriate values for the IT policy rules.
   d. Click Save all.

After you finish: For more information, see the BlackBerry Enterprise Server Policy Reference Guide.
Change the value for an IT policy rule

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Policy.
2. Click Manage IT policies.
3. In the IT policy information section, click the IT policy.
4. Click Edit IT policy.
5. On a tab for an IT policy group, change the appropriate values for the IT policy rules.
6. Click Save all.

Assign an IT policy to a group

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Group.
2. Click Manage groups.
3. In the Manage groups section, click the group that you want to assign an IT policy to.
4. On the Policies tab, click Edit group.
5. In the drop-down list, click an IT policy.
6. Click Save all.

Sending an IT policy over the wireless network

If your organization's environment includes C++ based BlackBerry® devices that are running BlackBerry® Device Software version 2.5 or later or Java® based BlackBerry devices that are running BlackBerry Device Software version 3.6 or later, the BlackBerry® Enterprise Server Express can send changes to IT policies to a BlackBerry device over the wireless network automatically. When the BlackBerry device receives an updated IT policy or a new IT policy, the BlackBerry device, BlackBerry® Desktop Software, and BlackBerry® Web Desktop Manager apply the configuration changes immediately.

By default, the BlackBerry Enterprise Server Express is designed to resend an IT policy to the BlackBerry device within a short period of time after you update the IT policy using the BlackBerry Administration Service. You can also resend an IT policy to a specific BlackBerry device manually. You can configure the BlackBerry Enterprise Server Express to resend the IT policy to the BlackBerry device at scheduled intervals regardless of whether you changed the IT policy.

Related topics
Using IT policy rules to manage BlackBerry Enterprise Solution security, 30
Assigning IT policies and resolving IT policy conflicts, 34

Resend an IT policy to a BlackBerry device manually

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for a user account.
4. In the search results, click the display name for the user account.
5. On the Policies tab, click View resolved IT policy data.
6. Click Resend IT policy to a device.

Resend an IT policy to a BlackBerry device automatically

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution topology.
2. Expand BlackBerry Domain > Component view.
3. In the Policy section, click an instance.
4. Click Edit instance.
5. In the General section, in the Policy resend interval (hours) field, type an interval that you want the BlackBerry device to resend the IT policy at.
6. Click Save All.
Assigning IT policies and resolving IT policy conflicts

You can assign IT policies directly to a user account or to a group. By default, if you do not assign an IT policy to a user account or a group that the user is a member of, the BlackBerry® Enterprise Server Express applies the Default IT policy to the user account. If you assign an IT policy to a group that a user account is a member of, the BlackBerry Enterprise Server Express applies the group IT policy to the user account. If you assign an IT policy to the user account directly, the BlackBerry Enterprise Server Express applies this IT policy to the user account instead of the group IT policy or Default IT policy.

If a user account is a member of multiple groups that have different IT policies, the BlackBerry Enterprise Server Express must determine which IT policy to apply to the user account. You must use one of the following reconciliation options:

<table>
<thead>
<tr>
<th>Method</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Apply one IT policy to the user account</td>
<td>The BlackBerry Enterprise Server Express applies one of the group IT policies to the user account. You specify rankings for the available IT policies using the BlackBerry Administration Service and the BlackBerry Enterprise Server Express applies the IT policy with the highest ranking. If you upgrade to BlackBerry Enterprise Server Express 5.0 SP2 or later from a previous version of the BlackBerry Enterprise Server Express, this is the default method for resolving IT policy conflicts.</td>
</tr>
<tr>
<td>Apply multiple IT policies to the user account</td>
<td>The BlackBerry Enterprise Server Express applies all of the group IT policies to the user account, resulting in a combined IT policy that has a unique ID. The BlackBerry Enterprise Server Express resolves conflicting IT policy rules using the ranking of the available IT policies that you specified using the BlackBerry Administration Service. If an IT policy rule is different in the multiple IT policies, the BlackBerry Enterprise Server Express applies the rule setting from the IT policy that you ranked the highest. If you install BlackBerry Enterprise Server Express 5.0 SP2 or later, this is the default method for resolving IT policy conflicts.</td>
</tr>
</tbody>
</table>

Option 1: Applying one IT policy to each user account, 34
Option 2: Applying multiple IT policies to each user account, 36

Option 1: Applying one IT policy to each user account

You can configure the BlackBerry® Enterprise Server Express to apply only one IT policy to a user account when a user account is a member of multiple groups that have different IT policies. In this scenario, the BlackBerry Enterprise Server Express applies the IT policy that you ranked the highest in the BlackBerry Administration Service.
If you upgrade to BlackBerry Enterprise Server Express 5.0 SP2 or later from a previous version of the BlackBerry Enterprise Server Express, this is the default method for resolving IT policy conflicts. If you install BlackBerry Enterprise Server Express 5.0 SP2 or later, the default method for resolving IT policy conflicts is to apply multiple IT policies to each user account and create a combined IT policy that has a unique ID for the user account.

Reconciliation rules for conflicting IT policies when you apply one IT policy to the user account

The BlackBerry® Enterprise Server Express can apply only one IT policy to a user account. Since you can assign IT policies to user accounts, groups, or the BlackBerry Domain, the BlackBerry Administration Service uses predefined rules to determine which IT policy it can apply to a user account.

The BlackBerry Administration Service might have to reconcile conflicting IT policies if you perform any of the following actions:

- add an IT policy to or remove an IT policy from a user account or group
- change an IT policy
- change the ranking of IT policies
- delete an IT policy

<table>
<thead>
<tr>
<th>Scenario</th>
<th>Rule</th>
</tr>
</thead>
<tbody>
<tr>
<td>You add a new user account to a BlackBerry Enterprise Server Express. You do not assign an IT policy directly to the user account and you do not add the user to a group.</td>
<td>The IT policy that you assigned to the BlackBerry Domain, or the Default IT policy that is assigned to the BlackBerry Domain, is assigned to the user account.</td>
</tr>
<tr>
<td>You assign an IT policy to a user account and a different IT policy to a group that the user account belongs to.</td>
<td>The IT policy that you assign to a user account takes precedence over an IT policy that you assign to a group. An IT policy that you assign to a group takes precedence over the IT policy that you assign to the BlackBerry Domain (or the Default IT policy).</td>
</tr>
<tr>
<td>A user account belongs to multiple groups. You assign multiple IT policies to the groups but do not assign an IT policy to the user account.</td>
<td>The BlackBerry Enterprise Server Express applies the IT policy that you ranked the highest in the BlackBerry Administration Service to the user account.</td>
</tr>
</tbody>
</table>

Change the method that the BlackBerry Enterprise Server Express uses to resolve conflicting IT policies

You can change the method that the BlackBerry® Enterprise Server Express uses to determine what IT policy to apply to a user account when a user account belongs to multiple groups that have different IT policies. If you change the method used to resolve conflicting IT policies, the next IT policy reconciliation process that occurs might have a significant impact on the performance of your organization’s BlackBerry Enterprise Server Express environment. It is a best practice to configure this feature during low usage periods.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry solution topology > BlackBerry Domain > Component view.
2. Click BlackBerry Administration Service.
3. At the bottom of the page, click **Switch method to resolve multiple IT policies**.
4. Click **Yes - Switch the method**.

**Related topics**
- Option 1: Applying one IT policy to each user account, 34
- Option 2: Applying multiple IT policies to each user account, 36

**Rank IT policies**

You must rank the IT policies that you create so that the BlackBerry® Enterprise Server Express can resolve IT policy conflicts when a user account is a member of multiple groups that have different IT policies.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **Policy**.
2. Click **Manage IT policies**.
3. Click **Set priority of IT policies**.
4. To move the IT policies higher or lower in the list, click the **up arrow** icon or **down arrow** icon.
5. Click **Save**.

**Option 2: Applying multiple IT policies to each user account**

You can configure the BlackBerry® Enterprise Server Express to apply multiple IT policies to a user account when a user account is a member of multiple groups that have different IT policies. The BlackBerry Enterprise Server Express creates a combined IT policy for the user account that has a unique ID by applying the policy rules from the multiple IT policies and resolving any conflicting rule settings. The BlackBerry Enterprise Server Express resolves conflicting rule settings by applying the rule setting from the IT policy that you ranked the highest in the BlackBerry Administration Service.

If you install BlackBerry Enterprise Server Express 5.0 SP2 or later, this is the default method for resolving IT policy conflicts. If you upgrade to BlackBerry Enterprise Server Express 5.0 SP2 or later from a previous version of the BlackBerry Enterprise Server Express, the default method for resolving IT policy conflicts is to assign one IT policy to each user account according to the rankings of the IT policies that you specify in the BlackBerry Administration Service.

**Reconciliation rules for conflicting IT policies when you apply multiple IT policies to a user account**

The BlackBerry® Enterprise Server Express can apply multiple IT policies to a user account if the user account is a member of multiple groups that have different IT policies. Since you can assign IT policies to user accounts, groups, or the BlackBerry Domain, the BlackBerry Administration Service uses predefined rules to apply an IT policy to a user account.

The BlackBerry Administration Service might have to reconcile conflicting IT policies if you perform any of the following actions:

- add an IT policy to or remove an IT policy from a user account or group
- change an IT policy
- change the ranking of IT policies
- delete an IT policy
## Scenario

<table>
<thead>
<tr>
<th>Scenario</th>
<th>Rule</th>
</tr>
</thead>
<tbody>
<tr>
<td>You add a new user account to a BlackBerry Enterprise Server Express. You do not assign an IT policy directly to the user account and you do not add the user account to a group.</td>
<td>The IT policy that you assigned to the BlackBerry Domain, or the default IT policy for the BlackBerry Domain, is assigned to the user account.</td>
</tr>
<tr>
<td>You assign an IT policy to a user account and different IT policies to the groups that the user account belongs to.</td>
<td>The IT policy that you assign to a user account takes precedence over the IT policies that you assign to the groups that the user belongs to. An IT policy that you assign to a group takes precedence over the IT policy that you assigned to the BlackBerry Domain (or the Default IT policy).</td>
</tr>
<tr>
<td>A user account belongs to multiple groups. You assign multiple IT policies to the groups but you do not assign an IT policy to the user account.</td>
<td>If you assign multiple IT policies to the groups that the user account belongs to, the BlackBerry Enterprise Server Express resolves the IT policy rule settings in the multiple IT policies and assigns a combined IT policy that has a unique ID to the user account. The BlackBerry Enterprise Server Express resolves conflicting settings for IT policy rules by applying the rule setting from the IT policy that you ranked the highest in the BlackBerry Administration Service. For example, you configure the Disable Photo Camera IT policy rule to Yes in IT policy A and to No in IT policy B. If you rank IT policy A higher than IT policy B, the Yes setting is applied for this rule.</td>
</tr>
<tr>
<td>A user account belongs to two groups. You assign the first group IT policy A, which has the Allow Browser IT policy rule as blank (which means that it uses the default value of Yes). You assign the second group IT policy B, which has the Allow Browser IT policy rule set to No. You ranked IT policy A higher than IT policy B in the BlackBerry Administration Service.</td>
<td>When the BlackBerry Enterprise Server Express resolves conflicting rule settings, any rule settings that have been explicitly configured to a value take precedence over IT policy rule settings that are blank (these rules revert to the default value). For example, in this scenario, the Allow Browser IT policy rule setting from IT policy B, No, is applied to the user account even though IT policy A is ranked higher than IT policy B, because the Allow Browser IT policy rule is blank in IT policy A. If the Allow Browser IT policy rule was configured to Yes in IT policy A, the Yes value would be applied to the user account.</td>
</tr>
</tbody>
</table>
Change the method that the BlackBerry Enterprise Server Express uses to resolve conflicting IT policies

You can change the method that the BlackBerry® Enterprise Server Express uses to determine what IT policy to apply to a user account when a user account belongs to multiple groups that have different IT policies. If you change the method used to resolve conflicting IT policies, the next IT policy reconciliation process that occurs might have a significant impact on the performance of your organization’s BlackBerry Enterprise Server Express environment. Option 1: Applying one IT policy to each user account, 34
Option 2: Applying multiple IT policies to each user account, 36

Rank IT policies

You must rank the IT policies that you create so that the BlackBerry® Enterprise Server Express can resolve IT policy conflicts when a user account is a member of multiple groups that have different IT policies.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand Policy.
2. Click Manage IT policies.
3. Click Set priority of IT policies.
4. To move the IT policies higher or lower in the list, click the up arrow icon or down arrow icon.
5. Click Save.

Preview how the BlackBerry Enterprise Server Express resolves IT policy conflicts

You can preview how the BlackBerry® Enterprise Server Express resolves conflicting settings for IT policy rules for multiple IT policies that you select. You can use this feature to determine which IT policies have conflicting IT policy rules and how the BlackBerry Enterprise Server Express resolves the conflicting rules. The preview displays the conflicting IT policy rules and the resolved settings for each rule. If an IT policy rule is not conflicting in the multiple IT policies that you selected, the preview does not display the policy rule in the results.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand Policy.
2. Click Manage IT policies.
3. Click Preview resolved IT policies.
4. Select two or more IT policies.
5. Click Preview.
View the resolved IT policy rules that are assigned to a user account

If a user account belongs to multiple groups, and you assign a different IT policy to each group, the BlackBerry® Enterprise Server Express resolves conflicting IT policies or IT policy rule settings using the reconciliation method that you select in the BlackBerry Administration Service. You can view the results of the IT policy reconciliation and the settings that the BlackBerry Enterprise Server Express resolves for each rule in the BlackBerry Administration Service. If an IT policy rule is not conflicting in the multiple IT policies that were applied to the user account, the preview does not display the IT policy rule.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for a user account.
4. In the search results, click the display name for a user account.
5. On the Policies tab, in the Resolved IT Policy name section, click the name of the IT policy.

Deactivating BlackBerry devices that do not have IT policies applied

To prevent BlackBerry® devices that do not have IT policies applied to them from remaining active on a BlackBerry® Enterprise Server Express, you can change the Disable users with unapplied IT policy option to True. The Disable user time limit (hours) option specifies the amount of time that BlackBerry devices can be active on a BlackBerry Enterprise Server Express without having an IT policy applied to the BlackBerry devices.

If you change the Disable users with unapplied IT policy option to True, by default, the BlackBerry Enterprise Server Express sends the IT policy to the BlackBerry devices every 30 minutes until the BlackBerry devices apply the IT policy or the time limit expires. If the time limit expires, the BlackBerry Enterprise Server Express deactivates the BlackBerry device PINs. The permitted range for this option is 0 hours to 8760 hours. If you specify 0 hours, BlackBerry devices deactivate when the IT policy cannot apply automatically.

Deactivate BlackBerry devices that do not have IT policies applied

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry solution topology > BlackBerry Domain > Component view > Policy.
2. Click the instance that you want to change.
3. In the Disable Users with Unapplied IT Policy drop-down list, click True.
4. In the Disable user time limit (hours) field, type the time (in hours) that can occur before the PINs for BlackBerry devices that you did not apply an IT policy to are deactivated on the BlackBerry® Enterprise Server Express.
5. Click Save All.

After you finish: Before you re-activate the BlackBerry devices on the BlackBerry Enterprise Server Express, on the BlackBerry devices, in the Security Options list, instruct users to click Wipe Handheld or Security Wipe to delete all of the data on the BlackBerry devices.
Creating new IT policy rules to control third-party applications

You can create IT policy rules to control the applications that your organization creates for BlackBerry® devices that are running in your organization’s environment. After you create an IT policy rule, you can add it to a new or existing IT policy and assign a value to it. Only applications that your organization creates can use the IT policy rule that you create. You cannot create new IT policy rules to control device applications and features.

Create an IT policy rule for a third-party application

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Policy.
2. Click Create an IT policy rule.
3. Type a name and description for the IT policy rule.
4. In the Type drop-down list, click the type of value that the IT policy rule uses.
5. In the Destination drop-down list, choose whether you want the BlackBerry device, the BlackBerry® Desktop Software, or both to be able to use the IT policy rule.
6. Click Save.

After you finish: Add the IT policy rule to an IT policy.

Change or delete IT policy rules for third-party applications

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Policy.
2. Click Manage IT policy rules.
3. Click an IT policy rule.
4. Perform one of the following actions:
   • To change the IT policy rule, click Edit IT policy rule. Change the appropriate values.
   • To delete the IT policy rule, click Delete IT policy rule. Verify that you want to delete the IT policy rule.
5. Click Save.

Delete an IT policy

If you delete an IT policy, the BlackBerry Administration Service identifies the users or groups that use the IT policy and determines what IT policy to apply to the users or groups instead. For example, if an IT policy is assigned to a user account and then you delete the IT policy, and the user account is not a member of a group, the BlackBerry Administration Service starts a job to apply the default IT policy to the user account.

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Policy.
2. Click Manage IT policies.
3. In the list of IT policies, click an IT policy.
4. Click **Delete IT policy**.
5. Click **Yes – Delete the IT policy**.

Configuring security options

Encrypting data that the BlackBerry Enterprise Server Express and a BlackBerry device send to each other

To encrypt data that is in transit between the BlackBerry® Enterprise Server Express and a BlackBerry device in your organization, the BlackBerry® Enterprise Solution uses BlackBerry transport layer encryption. BlackBerry transport layer encryption is designed to encrypt data from the time that a BlackBerry device user sends a message from the BlackBerry device to when the BlackBerry Enterprise Server Express receives the message, and from the time that the BlackBerry Enterprise Server Express sends a message to when the BlackBerry device receives the message.

Before the BlackBerry device sends a message, it compresses and encrypts the message using the device transport key. When the BlackBerry Enterprise Server Express receives a message from the BlackBerry device, the BlackBerry Dispatcher decrypts the message using the device transport key, and then decompresses the message.

Algorithms that the BlackBerry Enterprise Solution uses to encrypt data

The BlackBerry® Enterprise Solution uses AES or Triple DES as the symmetric key cryptographic algorithm for encrypting data. By default, the BlackBerry® Enterprise Server Express uses the strongest algorithm that both the BlackBerry Enterprise Server Express and the BlackBerry device support for BlackBerry transport layer encryption.

If you configure the BlackBerry Enterprise Server Express to support AES and Triple DES, by default, the BlackBerry Enterprise Solution generates device transport keys using AES encryption. If a BlackBerry device uses BlackBerry® Device Software version 3.7 or earlier or BlackBerry® Desktop Software version 3.7 or earlier, the BlackBerry Enterprise Solution generates the device transport keys of the BlackBerry device using Triple DES.

Change the symmetric key encryption algorithm that the BlackBerry Enterprise Solution uses

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. In the BlackBerry Enterprise Server section, click the instance that you want to change.
3. Click Edit instance.
4. In the Security information section, in the Encryption algorithm drop-down list, click the encryption algorithm that you want the BlackBerry® Enterprise Solution to use.
5. Click Save All.

After you finish: Re-activate all of the BlackBerry devices that are located in the BlackBerry Domain so that users can send and receive email messages on their BlackBerry devices.

Assigning BlackBerry devices to user accounts, 68
Managing BlackBerry device access to the BlackBerry Enterprise Server Express

You can use the Enterprise Service Policy to control which BlackBerry® devices can connect to a BlackBerry® Enterprise Server Express. By default, after you turn on the Enterprise Service Policy, the BlackBerry Enterprise Server Express permits connections from any BlackBerry device that you previously associated with the BlackBerry Enterprise Server Express. The BlackBerry Enterprise Server Express also prevents connections from any BlackBerry device that you associate with the BlackBerry Enterprise Server Express after you turn on the Enterprise Service Policy.

You can configure an allowed list to determine which BlackBerry devices can access a BlackBerry Enterprise Server Express. A BlackBerry device that meets the criteria that you specify in the allowed list can associate with the BlackBerry Enterprise Server Express when the BlackBerry device activates over the wireless network.

You can define the following types of criteria:

- specific BlackBerry device PINs
- range of BlackBerry device PINs
- specific manufacturers
- specific BlackBerry device models

The BlackBerry Administration Service includes lists of permitted manufacturers and models of BlackBerry devices that you associated with the BlackBerry Enterprise Server Express previously.

You can permit a user to override the Enterprise Service Policy so that a BlackBerry device can connect to the BlackBerry Enterprise Server Express even if you configure the allowed list with criteria that exclude that BlackBerry device.

Turn on the Enterprise Service Policy

You can turn on the Enterprise Service Policy to control which BlackBerry® devices can connect to the BlackBerry® Enterprise Server Express.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. Click BlackBerry Enterprise Server.
3. Click Turn on Enterprise Service Policy.
4. Click Yes - Turn on enterprise service policy.
Configure the Enterprise Service Policy

By default, when you turn on the Enterprise Service Policy, all BlackBerry® devices that you activated can access the BlackBerry® Enterprise Server Express. You must configure the Enterprise Service Policy to specify the BlackBerry devices that you want to access the BlackBerry Enterprise Server Express. To add a new BlackBerry device to the BlackBerry Enterprise Server Express, you must add the PIN for the BlackBerry device to the Enterprise Service Policy before a user can activate the BlackBerry device.

**Before you begin:** Turn on the Enterprise Service Policy.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. Click BlackBerry Enterprise Server.
3. Click Edit component.
4. In the Enterprise Service Policy section, in the Allowed drop-down list, click Yes for each BlackBerry device model that you want to permit to access the BlackBerry Enterprise Server Express.
5. To add a new BlackBerry device, on the Add New Allowed PINs tab, in the New Allowed PINs field, type the PIN for the BlackBerry device. Click the Add icon.
6. To remove a BlackBerry device from the list, on the Removing Existing Allowed Pins tab, in the PINs section, select the PIN for the BlackBerry device.
7. Click Save All.

Permit a user to override the Enterprise Service Policy

**Before you begin:** Turn on the Enterprise Service Policy.

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for a user account.
4. Click the display name for the user account.
5. Click Edit user.
6. On the Component information tab, in the BlackBerry Enterprise Server information section, in the Enterprise service policy override drop-down list, click True.
7. Click Save All.

Extending messaging security to a BlackBerry device

If your organization's messaging environment supports highly secure messaging technology such as PGP® encryption or S/MIME encryption, you can configure the BlackBerry® Enterprise Solution to encrypt a message using PGP encryption or S/MIME encryption so that the message remains encrypted when the BlackBerry® Enterprise Server Express forwards the message to the email applications of recipients. To extend messaging security, the sender and
recipient must install highly secure messaging technology on the computers that host the email applications and on their BlackBerry devices, and you must configure the BlackBerry devices to use the highly secure messaging technology.

**Extending messaging security using PGP encryption**

You can extend messaging security for the BlackBerry® Enterprise Solution and permit a BlackBerry device user to send and receive PGP® protected email messages and PGP protected PIN messages on a BlackBerry device. The BlackBerry Enterprise Solution supports the OpenPGP format and PGP/MIME format on the BlackBerry device.

To extend messaging security, you must instruct the BlackBerry device user to install the PGP® Support Package for BlackBerry® smartphones on the BlackBerry device and to transfer the PGP private key of the BlackBerry device user to the BlackBerry device. The BlackBerry device user can use the PGP private key to digitally sign, encrypt, and send PGP protected messages from the BlackBerry device. If a BlackBerry device user does not install the PGP Support Package for BlackBerry smartphones, the BlackBerry device displays an error message when the BlackBerry device user tries to open PGP protected messages.

To require the BlackBerry device user to use PGP encryption when forwarding or replying to messages, you can configure the PGP Force Digital Signature IT policy rule and the PGP Force Encrypted Messages IT policy rule.

The PGP Support Package for BlackBerry smartphones is designed to support encoding and decoding Unicode messages and permits PGP encryption using keys or passwords. The PGP Support Package for BlackBerry smartphones permits the BlackBerry device to encrypt PGP protected email messages or PGP protected PIN messages using a password that the sender and recipient both know.

For more information about the OpenPGP format, see RFC 2440. For more information about the PGP/MIME format, see RFC 3156.

**Configure the BlackBerry Enterprise Solution to support PGP encryption**

1. Configure the PGP Universal Server Address IT policy rule in the IT policy that you assign to BlackBerry® device users.
2. Instruct users to install the PGP® Support Package for BlackBerry® smartphones on BlackBerry devices.
3. Instruct users to enroll with the PGP® Universal Server when the BlackBerry devices prompt them to so that the BlackBerry devices can process PGP protected messages.

**Extending messaging security using S/MIME encryption**

You can extend messaging security for the BlackBerry® Enterprise Solution and permit a BlackBerry device user to send and receive S/MIME-protected email messages and S/MIME-protected PIN messages on a BlackBerry device.

To extend messaging security, you or the BlackBerry device user must install the S/MIME Support Package for BlackBerry® smartphones on the BlackBerry device and transfer the S/MIME private key of the BlackBerry device user to the BlackBerry device. The S/MIME Support Package for BlackBerry smartphones is designed to work with email applications such as Microsoft® Outlook®, Microsoft Outlook Express, and IBM® Lotus Notes®, and with PKIs such as Netscape®, Entrust Authority™ Security Manager version 5 and later, and Microsoft certification authorities.
The BlackBerry device user uses the S/MIME private key to decrypt S/MIME-protected messages on the BlackBerry device and to sign, encrypt, and send S/MIME-protected messages from the BlackBerry device. If the BlackBerry® Enterprise Server Express receives an S/MIME-encrypted message but the BlackBerry device user did not install the S/MIME Support Package for BlackBerry smartphones, the BlackBerry Enterprise Server Express sends a message to the BlackBerry device to indicate that the BlackBerry device does not support S/MIME-encrypted messages.

After the BlackBerry device user installs the S/MIME Support Package for BlackBerry smartphones, the BlackBerry device user can synchronize and manage S/MIME certificates and S/MIME private keys using the certificate synchronization tool of the BlackBerry® Desktop Manager. The BlackBerry Enterprise Server Express does not apply an appended disclaimer to S/MIME-protected messages that the BlackBerry device user sends from the BlackBerry device. Digital signatures on S/MIME-protected messages that the BlackBerry device sends are not valid if disclaimers are appended to the messages.

To require the BlackBerry device user to use S/MIME encryption when forwarding or replying to messages, you can configure the S/MIME Force Digital Signature IT policy rule and the S/MIME Force Encrypted Messages IT policy rule.

The S/MIME Support Package for BlackBerry smartphones is also designed to support the following features:
- encoding and decoding of Unicode messages
- ability to use a password, which the sender and recipient each know, to encrypt S/MIME-protected email messages or PIN messages
- ability to read S/MIME certificates that are stored on a smart card

**Configure the BlackBerry Enterprise Solution to support S/MIME encryption**

2. If required, configure the BlackBerry MDS Connection Service to retrieve certificates and the status of certificates from LDAP servers, DSML certificate servers, OCSP servers, or CRL servers.
3. Instruct users to install the S/MIME Support Package for BlackBerry® smartphones on BlackBerry devices.
4. Perform one of the following tasks:
   - Instruct users to add the Certificate Synchronization Manager to the BlackBerry® Desktop Manager so that the BlackBerry Desktop Manager can manage certificates for the BlackBerry devices.
   - Configure the BlackBerry Enterprise Server Express to permit users to enroll certificates over the wireless network.

**Configure encryption options for S/MIME-protected messages**

You can configure encryption options to control how the BlackBerry® Enterprise Server Express processes S/MIME-protected messages.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. In the Email section, click the instance that you want to change.
3. Click Edit instance.
4. On the Messaging tab, in the Security settings section, perform any of the following actions:
• To require that the BlackBerry Enterprise Server Express encrypts messages using S/MIME encryption for a second time when the BlackBerry Enterprise Server Express processes S/MIME-protected messages that an S/MIME-enabled application weakly encrypted or only signed, in the Turn on S/MIME encryption on signed and weakly encrypted messages drop-down list, click True.
• To permit BlackBerry device users that have email applications that do not support S/MIME to read the text of an S/MIME-protected message, in the Send S/MIME messages in clear-signed format drop-down list, click True.
• To require that the BlackBerry Enterprise Server Express deletes attachment data from any signed-only S/MIME-protected messages so that the BlackBerry Enterprise Server Express conserves bandwidth, in the Remove attachment data from signed S/MIME messages drop-down list, click True.
• To require that the BlackBerry Enterprise Server Express sends encrypted S/MIME-protected messages using an updated MIME content-type that is in accordance with PKCS#7 instead of the default legacy MIME content-type, in the Use PKCS #7 MIME type drop-down list, click True.

5. Click Save all.

6. To make sure that the changes take effect immediately, perform the following actions to restart the BlackBerry Messaging Agent:
   a. On the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > BlackBerry Enterprise Server.
   b. Click the BlackBerry Enterprise Server Express instance that includes the BlackBerry Messaging Agent.
   c. Click Restart instance.

Related topics
Restarting BlackBerry Enterprise Server Express components, 277

Turn off support for processing S/MIME-protected messages on the BlackBerry Enterprise Server Express

By default, the BlackBerry® Enterprise Server Express can process S/MIME-protected messages. You can turn off support for processing S/MIME-protected messages if the BlackBerry Enterprise Server Express experiences issues when it processes S/MIME-protected messages or if your organization does not use S/MIME encryption.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. In the Email section, click the instance that you want to change.
3. On the Messaging tab, click Edit instance.
4. In the Security settings section, in the Turn on S/MIME message processing drop-down list, click False.
5. Click Save All.
Generating organization-specific encryption keys for PIN-message encryption

By default, all BlackBerry® devices store a common PIN encryption key that they use to protect PIN messages. To limit the number of devices that can decrypt PIN messages that BlackBerry device users in your organization send from their devices, you can generate a new PIN encryption key that is stored on and known only to devices in your organization. A device that has a PIN encryption key that is specific to your organization can perform the following actions:

• can only encrypt PIN messages sent to other devices on your organization's network that use the same PIN encryption key
• can only decrypt PIN messages that are sent from devices that use the global PIN encryption key or PIN messages from other devices on your organization's network that use the same PIN encryption key
• cannot decrypt PIN messages sent from devices that use a PIN encryption key from another organization

You should generate a new PIN encryption key if you know that your current organization-specific PIN encryption key is compromised.

Generate a PIN encryption key

You can generate a PIN encryption key to make the BlackBerry® devices in your organization use a PIN encryption key that is specific to your organization for PIN messaging.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology.
2. Click BlackBerry Domain.
3. Click Update peer-to-peer encryption key.
4. Click Create new key.

Turn off BlackBerry services that the BlackBerry MDS Connection Service provides

You can prevent BlackBerry® device users that you associate with a BlackBerry® Enterprise Server Express from browsing the intranet or Internet or running applications that communicate with application servers and content servers. You can turn off the BlackBerry services if you want to enhance security, save bandwidth on the wireless network, or conserve system resources on the computer.

1. In the BlackBerry Administration Service, expand BlackBerry Solution topology > BlackBerry Domain > Component view > BlackBerry Enterprise Server.
2. Click the instance that you want to change.
3. Click Edit Instance.
4. In the External services turned on drop-down list, click No.
5. Click Save All.
6.  Restart the BlackBerry Enterprise Server Express.

Configuring the BlackBerry MDS Connection Service to use a proxy server

You can configure the BlackBerry® MDS Connection Service to use a proxy server to access web addresses on the Internet and your organization’s intranet. You should use a proxy method that is consistent with the proxy method that other applications and servers in your organization use to access web content.
Proxy servers typically do not permit network traffic between servers that are on the same side of the firewall, so you can configure the BlackBerry MDS Connection Service to use a .pac file, or to access the Internet directly through a proxy server. You can also configure multiple proxy servers to manage traffic to specific web addresses, and you can specify URLs that the BlackBerry Enterprise Server Express components can access without using a proxy server.

**Related topics**
- Configuring multiple BlackBerry Enterprise Server Express instances to use the same BlackBerry MDS Connection Service, 57

### Configure the BlackBerry MDS Connection Service to use a .pac file

You can configure the BlackBerry® MDS Connection Service to use a .pac file. The BlackBerry MDS Connection Service supports only one .pac file.

1. In the BlackBerry Administration Service, in the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service**.
2. Click the instance that you want to change.
3. Click **Edit instance**.
4. On the **Proxy mappings** tab, in the **Universal resource locator** field, type the regular expression for the web address that you want the proxy mapping rule to control.
5. In the **Proxy type** drop-down list, perform one of the following actions:
   - To detect a .pac file automatically, click **AUTO**.
   - To specify the location of the .pac file, click **PAC**. In the **Proxy string** field, type the proxy server name, port number, and location of the .pac file using the following format: `<proxy_server>:<port>/<pac_filepath>/ <pac_filename>`.
6. Click the **Add** icon for the proxy item. If you add more than one proxy item, use the **Up** and **Down** icons to set the priority of the proxy items.
7. Click the **Add** icon for the web address. If you add more than one web address, use the **Up** and **Down** icons to set the priority of the web addresses.
8. Click **Save all**.

### Configure the BlackBerry MDS Connection Service to use a proxy server

You can configure the BlackBerry® MDS Connection Service to access web servers through a proxy server. You can specify more than one proxy string in a proxy mapping rule for a web address. If the BlackBerry MDS Connection Service cannot access the web server using the first proxy string, it tries to access the web server using the subsequent proxy strings that you specify, until the component accesses the web server.

If the BlackBerry MDS Connection Service is configured to use a proxy server, BlackBerry device users can browse web sites that use HTTPS if the proxy server supports basic authentication only.

1. In the BlackBerry Administration Service, in the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service**.
2. Click the instance that you want to change.
3. Click **Edit instance**.

4. On the **Proxy mappings** tab, in the **Universal resource locator** field, type the URL regular expression for the web address that you want the proxy mapping rule to control.

5. In the **Proxy type** drop-down list, perform one of the following actions:
   - To configure a proxy server, click **PROXY**. In the **Proxy string** field, type the proxy server name and port number using the following format: `<proxy_server>:<port>`.
   - To exclude the web address from routing through the proxy server, click **DIRECT**.

6. Click the **Add** icon for the proxy item. If you add more than one proxy item, use the **Up** and **Down** icons to set the priority for the proxy items.

7. Click the **Add** icon for the web address. If you add more than one web address, use the **Up** and **Down** icons to set the priority for the web addresses.

8. Click **Save all**.

---

**Configure the BlackBerry MDS Connection Service to authenticate to a proxy server on behalf of BlackBerry devices**

You can configure the BlackBerry® MDS Connection Service to authenticate to a proxy server on behalf of BlackBerry devices.

**Before you begin:** If you want to configure the BlackBerry MDS Connection Service to authenticate to a proxy server on behalf of BlackBerry devices, turn on authentication support for the BlackBerry MDS Connection Service.

1. In the BlackBerry Administration Service, in the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service**.

2. Click the instance that you want to change.

3. Click **Edit instance**.

4. On the **Proxy mappings** tab, click the **Edit** button for a web address.

5. In the **Credentials** section, in the **User name** field, type the user name that the BlackBerry MDS Connection Service can use to connect to the proxy server that is defined for the web address.

6. In the **Password** and **Confirm password** fields, type the password for the user name.

7. Click the **Add** icon.

8. Click **Save all**.

**Related topics**

Configure how BlackBerry devices authenticate to content servers, 117
Configuring the BlackBerry Administration Service to use a proxy server

If you want to allow the BlackBerry® Administration Service to automatically download device.xml files, vendor.xml files, and information about BlackBerry® Device Software bundles from the BlackBerry® Infrastructure, and your organization uses a proxy server, you must configure the BlackBerry Administration Service to select and authenticate (if necessary) with the proxy server.

Configuring proxy selection for the BlackBerry Administration Service

You can configure the BlackBerry® Administration Service to select a proxy server either manually or automatically.

To manually select a proxy server, you can use one of the following tools:
• Proxy Configuration Tool (proxycfg.exe) with Windows Server® 2003 or earlier
• Network Shell Utility (netsh.exe) with Windows Server 2008
• Windows® Internet Explorer®

To automatically select a proxy server, you can use one of the following methods:
• enable the Web Proxy Autodiscovery Protocol using the BlackBerry Enterprise Trait Tool
• specify a URL for a PAC file using Windows Internet Explorer

Configuring manual proxy selection for a BlackBerry Administration Service instance

Depending on the operating system on the computer that hosts the BlackBerry® Administration Service instance, you can use the Proxy Configuration Tool or the Network Shell Utility to manually select a proxy server for a BlackBerry Administration Service instance. You must configure manual proxy selection for all of the computers that host a BlackBerry Administration Service instance. Both the Proxy Configuration Tool and the Network Shell Utility store the proxy server settings in the HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Internet Settings\Connections\WinHttpSettings registry key. You must run both tools as an administrator.

The Proxy Configuration Tool works with Windows Server® 2003 or earlier, and it is located in one of the following locations:
• For 32-bit Windows® operating systems, the Proxy Configuration Tool is located at c:\Windows\system32\.
• For 64-bit Windows operating systems, the Proxy Configuration Tool is located at c:\Windows\sysWow64\.

For more information about the Proxy Configuration Tool, visit www.msdn.microsoft.com and search for proxycfg.exe.

Configure manual proxy selection for the Windows account that runs the BlackBerry Administration Service

Perform this task on all of the computers that host a BlackBerry® Administration Service instance.

1. On the computer that hosts the BlackBerry Administration Service, log in using the Windows® account that runs the BlackBerry Administration Service.
2. Open Windows® Internet Explorer®.
3. Click Tools > Internet Options.
4. On the Connections tab, click LAN settings.
5. Select Use a proxy server for your LAN.
6. In the Address field, type the address for the proxy server.
7. In the Port field, type the port number for the proxy server.
8. Click OK.
9. Click OK.

Windows Internet Explorer stores the settings for the proxy server in the HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Internet Settings registry key.

Configure the BlackBerry Administration Service to use the Web Proxy Autodiscovery Protocol to select a proxy server automatically

If you want to configure the BlackBerry® Administration Service to use the Web Proxy Autodiscovery Protocol to select a proxy server automatically, you must use the BlackBerry® Enterprise Trait Tool. The Web Proxy Autodiscovery Protocol uses DHCP and DNS to find a PAC file. Perform this task on any computer that hosts a BlackBerry Administration Service instance.

CAUTION: If the proxy server authenticates using HTTP basic authentication, the Web Proxy Autodiscovery Protocol file must be on a computer that is separate from the proxy server and uses Windows® authentication or anonymous authentication.

1. On the computer that hosts the BlackBerry Administration Service, at the command prompt, navigate to the folder that contains the TraitTool.exe file.
2. To turn on Web Proxy Autodiscovery Protocol, type traittool -global -trait BASIsProxyWPADOptionEnabled -set 1.

Turn off Web Proxy Autodiscovery Protocol

Perform this task on any computer that hosts a BlackBerry Administration Service instance.

1. On the computer that hosts the BlackBerry Administration Service, at the command prompt, navigate to the folder that contains the TraitTool.exe file.
2. To turn off Web Proxy Autodiscovery Protocol, type traittool -global -trait BASIsProxyWPADOptionEnabled -erase.
Configure the BlackBerry Administration Service to use a PAC file to select a proxy server automatically

Perform this task on all of the computers that host a BlackBerry® Administration Service instance. **CAUTION:** If the proxy server authenticates using HTTP basic authentication, the PAC file must be on a computer that is separate from the proxy server and uses Windows® authentication or anonymous authentication.

**Before you begin:**

Obtain the URL for the PAC file.

1. On the computer that hosts the BlackBerry Administration Service instance, log in using the Windows® account that runs the BlackBerry Administration Service.
2. Open Windows® Internet Explorer®.
3. Click Tools > Internet Options.
4. On the Connections tab, click LAN settings.
5. Select Use automatic configuration script.
6. In the Address field, type the URL for the PAC file.
7. Click OK.
8. Click OK.

Configuring the BlackBerry Administration Service to authenticate with a proxy server

If your organization's proxy server requires authentication, you must configure the BlackBerry® Administration Service to authenticate with the proxy server.

If the proxy server uses Windows® authentication, you must configure the proxy server to authenticate the Windows account that runs the BlackBerry Administration Service.

If your proxy server uses HTTP basic authentication, you can configure the user name and password for HTTP basic authentication using the BlackBerry Enterprise Trait Tool. You can specify the credentials for either the entire BlackBerry Domain or for individual BlackBerry Administration Service instances. The BlackBerry Administration Service tries the credentials that you specify for the BlackBerry Administration Service instance first and then tries the credentials that you specify for the BlackBerry Domain.

**Configure the BlackBerry Administration Service to use HTTP basic authentication**

You use the BlackBerry® Enterprise Trait Tool to configure the BlackBerry Administration Service to use HTTP basic authentication to authenticate with a proxy server. HTTP basic authentication requires a user name and password for authentication.

1. On the computer that hosts the BlackBerry Administration Service, at the command prompt, navigate to the folder that contains the TraitTool.exe file.
2. Perform one of the following tasks:
## Task

### Specify the credentials for HTTP basic authentication that your organization's BlackBerry Domain uses.

**Steps**

- a. Type `traittool -global -trait BASProxyBasicAuthUID -set <user_name>`, where `<user_name>` is the user name (for example, `user01@blackberry.com` or `blackberry.com\user01`).
- b. Type `traittool -global -trait BASProxyBasicAuthPassword -set <password>`, where `<password>` is the password.

### Specify the credentials for HTTP basic authentication that a specific BlackBerry Administration Service instance uses.

**Steps**

- a. Type `traittool -BASServer <name> -trait BASProxyBasicAuthUID -set <user_name>`, where `<name>` is the host name of the computer that hosts the BlackBerry Administration Service instance and `<user_name>` is the user name (for example, `user01@blackberry.com` or `blackberry.com\user01`) for that computer.
- b. Type `traittool -BASServer <name> -trait BASProxyBasicAuthPassword -set <password>`, where `<name>` is the host name of the computer that hosts the BlackBerry Administration Service instance and `<password>` is the password for the computer.

## Delete credentials for HTTP basic authentication

1. On the computer that hosts the BlackBerry® Administration Service, at the command prompt, navigate to the folder that contains the TraitTool.exe file.
2. Perform one of the following tasks:

<table>
<thead>
<tr>
<th>Task</th>
<th>Steps</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Delete the user name and password that all of the BlackBerry Administration Service instances in your organization's BlackBerry Domain use for HTTP basic authentication.</strong></td>
<td><strong>Steps</strong></td>
</tr>
<tr>
<td>a. Type <code>traittool -global -trait BASProxyBasicAuthUID -erase</code>.</td>
<td></td>
</tr>
<tr>
<td>b. Type <code>traittool -global -trait BASProxyBasicAuthPassword -erase</code>.</td>
<td></td>
</tr>
<tr>
<td><strong>Delete the user name and password for the computer that a single BlackBerry Administration Service instance in your organization's BlackBerry Domain uses for HTTP basic authentication.</strong></td>
<td><strong>Steps</strong></td>
</tr>
<tr>
<td>a. Type <code>traittool -BASServer &lt;name&gt; -trait BASProxyBasicAuthUID -erase</code>.</td>
<td></td>
</tr>
<tr>
<td>b. Type <code>traittool -BASServer &lt;name&gt; -trait BASProxyBasicAuthPassword -erase</code>.</td>
<td></td>
</tr>
</tbody>
</table>
Configuring multiple BlackBerry Enterprise Server Express instances to use the same BlackBerry MDS Connection Service

To help make a BlackBerry® Domain more scalable, you can configure multiple BlackBerry® Enterprise Server Express instances to use the same BlackBerry MDS Connection Service. If a BlackBerry Domain contains one BlackBerry Enterprise Server Express, all of the BlackBerry Enterprise Server Express components are associated with that BlackBerry Enterprise Server Express automatically.

Configure multiple BlackBerry Enterprise Server Express instances to use the same BlackBerry MDS Connection Service

You can configure multiple BlackBerry® Enterprise Server Express instances to use the same central push server to transfer application data to and from BlackBerry devices and to manage HTTP requests from the BlackBerry® Browser.

**Before you begin:** Specify a BlackBerry MDS Connection Service as a central push server.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service**.
2. Click the instance that you want to change.
3. Click **Edit instance**.
4. On the **Supported Dispatcher instances** tab, in the **Available Dispatcher instances** list, click the BlackBerry Enterprise Server Express instance that you want to use the BlackBerry MDS Connection Service.
5. Click **Add**.
6. Repeat steps 4 and 5 for each BlackBerry Enterprise Server Express instance that you want to have use the BlackBerry MDS Connection Service.
7. Click **Save all**.

**Related topics**

Specifying a BlackBerry MDS Connection Service as a central push server, 116

Configuring support for Unicode languages

Configure support for Unicode languages

You can make sure that the messaging application can display the Unicode messages that the BlackBerry® device sends by configuring the BlackBerry® Enterprise Server Express to support Unicode languages (for example, Japanese, Korean, or Simplified Chinese).

1. On the computer that hosts the BlackBerry Enterprise Server Express, on the taskbar, click **Start > Run**.
2. Type `regedit`.
3. Click **OK**.
4. Perform one of the following actions:
   • If you are running a 32-bit version of Windows®, go to HKEY_LOCAL_MACHINE\SOFTWARE\Research In Motion\BlackBerry Enterprise Server\Agents.
   • If you are running a 64-bit version of Windows, go to HKEY_LOCAL_MACHINE\SOFTWARE\WOW6432Node \Research In Motion\BlackBerry Enterprise Server\Agents.

5. If the MAPIEncoding registry key exists, perform one of the following actions:
   • Delete the key.
   • Change the value of the key to 1.

6. Perform one of the following actions:
   • If you are running a 32-bit version of Windows, go to HKEY_LOCAL_MACHINE\SOFTWARE\Research In Motion \BlackBerry Enterprise Server\Setup.
   • If you are running a 64-bit version of Windows, go to HKEY_LOCAL_MACHINE\SOFTWARE\WOW6432Node \Research In Motion\BlackBerry Enterprise Server\Setup.

7. Verify that the ConfigKeystoreCountry registry key is set to one of the following values, depending on your organization’s environment:
   • CN for Simplified Chinese
   • JP for Japanese
   • KR for Korean

8. In the Windows Services, restart the BlackBerry Dispatcher.

Related topics
Restarting BlackBerry Enterprise Server Express components, 277

Change the character encoding that the BlackBerry Enterprise Server Express uses to send Unicode messages

By default, when the BlackBerry® Enterprise Server Express receives Unicode messages from BlackBerry devices, it uses UTF-8 character encoding to process the Unicode messages. If email applications cannot correctly display Unicode messages that devices send (for example, if email applications cannot display attachment file names or contact lists correctly), you can configure the BlackBerry Enterprise Server Express to select another character encoding to use to process Unicode messages.

Before you begin: Configure support for Unicode languages.

1. On the computer that hosts the BlackBerry Enterprise Server Express, on the taskbar, click Start > Run.
2. Type regedit.
3. Click OK.
4. Perform one of the following actions:
   • If you are running a 32-bit version of Windows®, go to HKEY_LOCAL_MACHINE\SOFTWARE\Research In Motion\BlackBerry Enterprise Server\Agents.
   • If you are running a 64-bit version of Windows, go to HKEY_LOCAL_MACHINE\SOFTWARE\WOW6432Node \Research In Motion\BlackBerry Enterprise Server\Agents.
5. Create a DWORD value that is named **AutoSelectOutgoingEncoding**.
6. Double-click the new DWORD value.
7. In the **Value data** field, perform one of the following actions:
   - To configure the BlackBerry Enterprise Server Express to send all email messages in UTF-8 and not select another character encoding, type 0.
   - To configure the BlackBerry Enterprise Server Express to select the most appropriate character encoding when it encodes plain-text messages, type 1. If the BlackBerry Enterprise Server Express cannot identify which character encoding to use, the BlackBerry Enterprise Server Express encodes plain-text messages in UTF-8.
   - To configure the BlackBerry Enterprise Server Express to select the most appropriate character encoding when it encodes email messages that use RTF or HTML, type 2. If the BlackBerry Enterprise Server Express cannot identify which character encoding to use, the BlackBerry Enterprise Server Express encodes email messages that use RTF or HTML in UTF-8.
   - To configure the BlackBerry Enterprise Server Express to select the most appropriate character encoding when it encodes plain-text messages and email messages that use RTF or HTML, type 3. If the BlackBerry Enterprise Server Express cannot identify which character encoding to use, the BlackBerry Enterprise Server Express encodes all email messages in UTF-8.
8. In the Windows Services, restart the BlackBerry Dispatcher.

### Configure support for Unicode text in calendars on BlackBerry devices in a Microsoft Exchange environment

You must complete this task for all Microsoft® Exchange versions to ensure calendar items use the correct Unicode characters in fields such as subject, location, or notes.

**Before you begin:** In a Microsoft Exchange 2003 environment, install the following hotfixes for wireless calendar synchronization:
- Visit [http://support.microsoft.com/kb/913643](http://support.microsoft.com/kb/913643) to download and install the required hotfix on the messaging server.
- Visit [http://support.microsoft.com/kb/923537/en-us](http://support.microsoft.com/kb/923537/en-us) to download and install the required hotfix on the computer that will host the BlackBerry® Enterprise Server Express.

1. On the BlackBerry Enterprise Server Express, on the **Start** menu, click **Run**.
2. Type **regedit**.
3. Click **OK**.
4. Perform one of the following actions:
   - If you are running a 32-bit version of Windows®, navigate to HKEY_LOCAL_MACHINE\Software\Research In Motion\BlackBerry Enterprise Server\Agents.
   - If you are running a 64-bit version of Windows, navigate to HKEY_LOCAL_MACHINE\Software \WOW6432Node\Research In Motion\BlackBerry Enterprise Server\Agents.
5. Create a DWORD value that is named **SetLocaleIDs**.
6. Set the value to 1.
7. In the Windows Services, restart the BlackBerry Messaging Agent.

Configuring user accounts

Creating user groups

You can create user groups and assign user accounts to user groups based on custom criteria, such as user location, organizational group, or BlackBerry® device model. User accounts that are part of a user group can exist on multiple BlackBerry® Enterprise Server Express instances in the BlackBerry Domain.

Create a group to manage similar user accounts

You can reduce the time that you spend managing user accounts by adding similar user accounts to a group, and assigning shared properties, such as software configurations or IT policies, to the group. Properties that you assign to a group are assigned to all user accounts in the group.

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Group.
2. Click Create a group.
3. In the Group information section, type a name and description for the group.
4. Click Save.

After you finish:

• Add properties to the group.
• Add user accounts to the group.

Related topics

Add user accounts to a group

You can add user accounts to a group to assign the properties of the group to user accounts automatically.

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for the user accounts.
4. Select the user accounts.
5. In the Add to user configuration list, click Add group.
6. In the Available groups list, click the group that you want to add the user accounts to.
7. Click Add.
8. Click Save.
Adding a user account to the BlackBerry Enterprise Server Express

If you add a user account to the BlackBerry® Enterprise Server Express, you are not required to locate the Microsoft® Exchange mailbox for the BlackBerry device that the user account is associated with or the routing group that the BlackBerry Enterprise Server Express is located in.

Related topics
Assigning BlackBerry devices to users, 67

Add a user account

You can add a user account to the BlackBerry® Enterprise Server Express, assign a BlackBerry device to a user account and activate the BlackBerry device. The user account must exist on your organization's messaging server.

Before you begin: If required, create a group of user accounts so that you can manage user accounts that are similar.

Before you activate a device on the BlackBerry® Enterprise Server Express, you can visit the BlackBerry Expert Support Center to use online tools to determine whether the device is associated with the BlackBerry® Internet Service. If you want to activate devices that are associated with the BlackBerry Internet Service over the wireless network, visit www.blackberry.com/go/serverdocs to see the Activating Devices That are Associated With the BlackBerry Internet Service Over the Wireless Network Technical Note.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Create a user.
3. Search for a user account.
4. Select the check box beside the display name for the user account.
5. Click Continue.
6. If your organization's environment includes multiple BlackBerry Enterprise Server Express instances, select the BlackBerry Enterprise Server Express that you want to add the user account to.
7. If groups exist in the Available groups list, click at least one group that you want to add the user account to.
8. Click Add.
9. To select an activation option, perform one of the following actions:

<table>
<thead>
<tr>
<th>Option</th>
<th>Step</th>
</tr>
</thead>
</table>
| Specify an activation password for the user account. | a. Click Create a user with activation password.  
b. In the Set activation password, section, type and confirm an activation password. The password must not contain special characters. Some BlackBerry devices do not support special characters and do not unlock when a user types a password that contains special characters.  
c. In the Password expiration (hours) field, type the amount of time, in hours, that you want to elapse before the activation password expires. |
### Create a user account that is not in the contact list in the BlackBerry Configuration Database

You can create a user account for a user even if the BlackBerry® Mail Store Service did not yet synchronize the contact information for the user account to the BlackBerry Configuration Database. If the BlackBerry Mail Store Service did not synchronize the contact information and you create a user account, the BlackBerry Administration Service does not display the user account in the search results.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Create user**.
3. Search for a user account.
4. Click **Add user from company directory**.
5. In the **Email address** field, type the email address, in SMTP format, of the user account that you want to add.
6. Click **Find user in company directory**.
7. Click **Save user to available user list and Create BlackBerry Enabled User**.
8. If you installed multiple BlackBerry® Enterprise Server Express instances, select the BlackBerry Enterprise Server Express that you want to add the user account to.
9. Click **Continue**.
10. Type and confirm an activation password. The password must not contain special characters. Specific BlackBerry devices do not support special characters and do not unlock when a user types a password that contains special characters.
11. In the **Password expiration** field, type the amount of time, in hours, that can elapse before the activation password expires.
12. Click **Create user**.
Export a list of user accounts

You can export a list of user accounts from a BlackBerry® Enterprise Server Express to a .csv file. The .csv file contains information about the user accounts, such as the user ID, display name, PIN and email address. You can import the list of user accounts to another BlackBerry Enterprise Server Express.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for one or more user accounts.
4. Click Manage multiple users.
5. Select the appropriate user accounts.
6. In the Export users list, click Export user.
7. Click Download file.
8. Save the .csv file.

Importing a list of user accounts to a BlackBerry Enterprise Server Express

You can add multiple user accounts to a BlackBerry® Enterprise Server Express by importing a .csv file that contains a list of user accounts and the required information to activate the user accounts on a BlackBerry Enterprise Server Express.

The .csv file can include the following information:

- user accounts that you want to create
- names of the groups you want to add the user accounts to
- activation passwords and expiry times that you want to assign to the user accounts

The BlackBerry Administration Service processes actions in the order that they appear in the .csv file. If the BlackBerry Administration Service encounters an error that is specific to an action during the import process (for example, an action is incorrectly formatted in the .csv file), the BlackBerry Administration Service continues to process the remaining actions that are listed in the file and displays an error message for the action that the BlackBerry Administration Service could not process.

The import process can take a long time (more than 30 minutes) to complete if you add more than 2000 user accounts.

Fields in a .csv file that contain user account information

The BlackBerry® Administration Service uses a .csv file to add user account information to the BlackBerry® Enterprise Server Express. The following table lists the fields in the .csv file that might be populated when you import user account information.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Email Address</td>
<td>The field specifies the email address for the user account.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>SRP ID</td>
<td>This field specifies the SRP ID for the BlackBerry Enterprise Server Express that you want to add the user account to.</td>
</tr>
<tr>
<td>Group Names</td>
<td>This field specifies the names of groups that you want to add the user account to.</td>
</tr>
<tr>
<td>Activation Password Operation</td>
<td>This field specifies whether an activation password is required to activate the user account and whether that password will be specified by the administrator or the BlackBerry Administration Service. The activation password value specified in this field can either be &quot;specify&quot;, &quot;none&quot;, or &quot;generate&quot; in lower case only. The activation password operation must be the same on each line in the .csv file. If the field is set to &quot;specify&quot;, the activation password and the expiry time (in hours) are optional fields in the .csv file. If the activation password and the expiry time values are not included in the .csv file, you will be prompted to specify these values the after uploading the .csv file. If you specify the activation password and the expiry time for the user accounts, the values must be provided on every line of the csv file. If the field is set to &quot;generate&quot;, the password is automatically generated by the BlackBerry Administration Service and the final two fields of each .csv line must be empty. The activation password will expire if the user does not activate the BlackBerry device on the BlackBerry Enterprise Server Express before the password timeout elapses. The default value is 48 hours. If the field is set to &quot;none&quot;, the user account will be created without an activation password and the final two fields of each .csv line must be empty. To activate a BlackBerry device on the BlackBerry Enterprise Server Express over the wireless network, an activation password is required.</td>
</tr>
<tr>
<td>Activation Password</td>
<td>This field specifies the activation password for the user account if an activation password is required.</td>
</tr>
<tr>
<td>Activation Password Expiry</td>
<td>This field specifies the amount of time, in hours, that can elapse before the activation password expires if an activation password is required. The activation password will expire if the user does not activate the BlackBerry device on the BlackBerry Enterprise Server Express before a default value of 48 hours elapses.</td>
</tr>
</tbody>
</table>
Import multiple user accounts from a .csv file

You can import a list of user accounts from a .csv file to a BlackBerry® Enterprise Server Express so that you can manage the user accounts.

**Before you begin:** Create a .csv file.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Click **Manage multiple users from an import list**.
4. In the **Manage multiple users from an import list** section, click **Browse**.
5. Navigate to the .csv file that contains the user accounts that you want to import.
6. Click **Next**.
7. Perform the appropriate actions for the user accounts.

Create multiple user accounts by importing the user accounts from a .csv file

You can import a list of user accounts from a .csv file and add them to a BlackBerry® Enterprise Server Express. The user accounts must exist on your organizations messaging server.

**Before you begin:** Create the .csv file.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Create a user**.
3. Click **Import new users**.
4. In the **Import users from a list** section, click **Browse**.
5. Navigate to the .csv file that contains the user accounts that you want to import.
6. Click **Continue**.
7. Perform the appropriate actions for the user accounts.
Assigning BlackBerry devices to users

Preparing to distribute a BlackBerry device

Before you distribute a BlackBerry® device to a user, you can configure the BlackBerry® Enterprise Server Express to synchronize email messages that the user previously sent and received on a supported BlackBerry device. You can synchronize messages for a new user or for a user whose PIN changed when they received a replacement BlackBerry device.

When the BlackBerry Enterprise Server Express synchronizes messages onto a BlackBerry device, it applies the message filter rules and redirection settings that are specific to the user account.

Change how the BlackBerry Enterprise Server Express downloads a user's existing email messages onto the BlackBerry device

By default, the BlackBerry® Enterprise Server Express synchronizes the headers of 200 email messages from the previous 5 days to a BlackBerry device when you activate it. If you change the BlackBerry Enterprise Server Express settings so that it synchronizes the headers and body of messages to a BlackBerry device when you activate it, the BlackBerry Enterprise Server Express can synchronize up to 3000 messages from the previous 30 days.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Email.
2. Click the instance that you want to change.
3. Click Edit host instance.
4. On the Messaging tab, in the Message prepopulation settings section, perform the following actions:
   • To specify the number of previous days that you want to synchronize messages from, in the Prepopulation By Message Age field, type a number.
   • To specify the maximum number of messages that you want to synchronize, in the Prepopulation By Message Count field, type a number.
5. Click Save all.

Prevent the BlackBerry Enterprise Server Express from synchronizing existing email messages onto a BlackBerry device

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Email.
2. Click the instance that you want to change.
3. Click Edit instance.
4. On the Messaging tab, in the Message prepopulation settings section, perform the following actions:
   • In the Prepopulation by message age field, type 0.
   • In the Prepopulation by message count field, type 0.
5. Click **Save all**.

### Identify whether a BlackBerry device is associated with the BlackBerry Internet Service

Before you activate a BlackBerry® device on the BlackBerry® Enterprise Server Express, you can visit the BlackBerry Expert Support Center to use online tools to determine whether the device is associated with the BlackBerry® Internet Service.

For more information about activating devices that are associated with the BlackBerry Internet Service over the wireless network, visit [www.blackberry.com/go/serverdocs](http://www.blackberry.com/go/serverdocs) to see the *Activating Devices That are Associated With the BlackBerry Internet Service Over the Wireless Network* Technical Note.

### Assigning BlackBerry devices to user accounts

The BlackBerry® Enterprise Server Express supports BlackBerry devices that are associated with a BlackBerry® Enterprise Server and devices that are associated with the BlackBerry® Internet Service. To assign devices to user accounts and activate the devices, you can use any of the following methods:

<table>
<thead>
<tr>
<th>Method</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BlackBerry Administration Service</td>
<td>You can activate a device before you give it to a user by connecting the device to a computer and logging in to the BlackBerry Administration Service.</td>
</tr>
<tr>
<td>over the wireless network</td>
<td>A new device user or a user that is receiving a replacement device can activate the device without requiring a physical connection to your organization's network.</td>
</tr>
<tr>
<td></td>
<td>For more information about activating devices that are associated with the BlackBerry Internet Service over the wireless network, visit <a href="http://www.blackberry.com/go/serverdocs">www.blackberry.com/go/serverdocs</a> to see the <em>Activating Devices That are Associated With the BlackBerry Internet Service Over the Wireless Network</em> Technical Note.</td>
</tr>
<tr>
<td>over the LAN</td>
<td>A new device user or a user that is receiving a replacement device can activate the device by connecting it to a computer and using the BlackBerry® Desktop Software.</td>
</tr>
<tr>
<td>BlackBerry® Web Desktop Manager</td>
<td>A new device user or a user that is receiving a replacement device can activate the device by connecting it to a computer and using the BlackBerry Web Desktop Manager.</td>
</tr>
<tr>
<td>over your organization's Wi-Fi® network</td>
<td>You can activate a Wi-Fi enabled BlackBerry device over your organization's Wi-Fi network.</td>
</tr>
</tbody>
</table>
If you add a user account that was previously located on another BlackBerry® Enterprise Server Express in a different BlackBerry Domain, or the user previously used the BlackBerry® Desktop Redirector, you must assign a device to the user account using the BlackBerry Administration Service.

Related topics
Managing BlackBerry Java Applications and BlackBerry Device Software, 77

Option 1: Activate a BlackBerry device using the BlackBerry Administration Service

Before you begin: If necessary, prepare a BlackBerry® device so that you can redistribute it to a user.

1. Connect the BlackBerry device to a computer that can access the BlackBerry Administration Service.
2. On the Devices menu, expand Attached devices.
3. Click Manage current device.
4. Click Assign current device.
5. Search for a user account.
6. In the search results, click the display name for a user account.
7. Click Associate user.
8. Click Assign current device.

When I connect a device to my computer I cannot see the device in the Attached devices section of the BlackBerry Administration Service

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Possible solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Your browser might not support device management in the BlackBerry® Administration Service when a BlackBerry device is connected to the computer with a USB cable.</td>
<td>Verify that the BlackBerry Administration Service supports the browser that you are using. For more information, visit <a href="http://www.blackberry.com/go/serverdocs">www.blackberry.com/go/serverdocs</a> to see the BlackBerry Enterprise Server Express Installation Guide.</td>
</tr>
</tbody>
</table>
### Possible cause

The computer that you are currently using to access the BlackBerry Administration Service might not have the required web components for the BlackBerry Administration Service.

### Possible solution

If the computer that you are using does not have the required web components installed, the BlackBerry Administration Service prompts you to install the web components (RIMWebComponents.cab) when you log in. Try logging in to the BlackBerry Administration Service again and choose to install the web components when you are prompted to.

---

**Option 2: Activating a BlackBerry device over the wireless network**

To activate a BlackBerry® device over the wireless network, you assign an activation password to a user account. The user receives the activation password in an email message and types the password on the device to start the activation process.

For more information about activating devices that are associated with the BlackBerry Internet Service over the wireless network, visit [www.blackberry.com/go/serverdocs](http://www.blackberry.com/go/serverdocs) to see the *Activating Devices That are Associated With the BlackBerry Internet Service Over the Wireless Network* Technical Note.

**Save bandwidth by synchronizing organizer data over the LAN**

When users activate BlackBerry® devices over the wireless network, by default, the BlackBerry® Enterprise Server Express synchronizes the initial download of organizer data over the wireless network. To save bandwidth, you can configure an IT policy to synchronize the initial download of organizer data through the BlackBerry Router and over your organization's LAN when users connect their BlackBerry devices to a computer that hosts the BlackBerry® Device Manager.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **Policy**.
2. Click **Manage IT policies**.
3. Click **Default**.
4. Click **Edit IT policy**.
5. On the **PIM Synchronization policy group** tab, in the **Disable Wireless Bulk Loads** rule, in the drop-down list, click **Yes**.
6. Click **Save all**.

**Wireless activation**

The wireless activation process activates BlackBerry® devices on the BlackBerry® Enterprise Server Express over the wireless network. Neither you nor the users are required to connect the BlackBerry devices to a computer to complete the activation process.

You can use wireless activation process to activate a large number of BlackBerry devices over the wireless network. When users want to activate BlackBerry devices on the BlackBerry Enterprise Server Express over the wireless network, they must notify you. You can use the BlackBerry Administration Service to configure activation passwords and distribute the passwords to the users.
The BlackBerry® Enterprise Solution can begin the wireless activation process automatically or when users open the activation application on the BlackBerry devices and type an activation password and email address. When the activation process completes, users can send email messages from and receive email messages on their BlackBerry devices.

When you initiate the wireless activation process, the BlackBerry Enterprise Server Express sends an email message with an etp.dat attachment from the blackberry.net domain to the user's email application. To make sure that the message is not blocked or modified, add the blackberry.net domain to the allowed list in the anti-virus and anti-spam software applications used by the messaging server or gateway.

**Activation passwords**

The BlackBerry® Enterprise Server Express activates a BlackBerry device over the wireless network using the wireless activation authentication protocol and an activation password that is specific to the user account associated with the BlackBerry device.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
</table>
| length of the activation password | Typical activation passwords are four to eight characters long. Activation passwords are limited to the following character lengths:  
  - BlackBerry device: 31 characters  
  - BlackBerry Administration Service: 20 characters  
  - KeyGenPassword field that stores the password in the BlackBerry Configuration Database: 50 characters |
| character support            | Activation passwords can include any type of character                                                                                                                                                       |
| security                     | Wireless activation is designed so that short activation passwords do not compromise the security of the protocol.                                                                                           |
|                             | You must distribute the activation password to the authenticated user securely. If the user receives the activation password, but does not activate the BlackBerry device on the BlackBerry Enterprise Server Express, a potentially malicious user who can access the activation password can connect another BlackBerry device to the BlackBerry Enterprise Server Express and assume the identity of the intended user.  
  When a user activates a BlackBerry device on the BlackBerry Enterprise Server Express, the activation password becomes inactive and a potentially malicious user cannot reuse it to activate another BlackBerry device.  
  If a user receives an activation password, you cannot generate a new activation password for the user until the activation password expires. An activation password expires after 48 hours by default. You can configure an activation to password expire earlier than the default value of 48 hours.  
  An activation password is no longer valid if any of the following events occur:                                                                 |

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>•</td>
<td>the user does not activate the BlackBerry device on the BlackBerry Enterprise Server Express before the default value of 48 hours elapses</td>
</tr>
<tr>
<td>•</td>
<td>the user types the activation password incorrectly five consecutive times</td>
</tr>
<tr>
<td>•</td>
<td>the BlackBerry Enterprise Server Express activates a BlackBerry device using the activation password</td>
</tr>
</tbody>
</table>

**Customize the activation password**

You can customize the type of activation password and the number of characters the password can contain that you send to BlackBerry® devices in a BlackBerry Domain. You can also change the length of time that the activation password exists before it expires.

1. In the BlackBerry Administration Service, on the **Devices** menu, expand **Wireless activations**.
2. Click **Device activation settings**.
3. In the **Password settings** section, perform the following actions:
   • To change the activation password length, in the **Auto-generated password length** field, type a character length.
   • To change the activation password type, in the **Auto-generated password type** drop-down list, click a password type.
   • To change the length of time that the activation password exists before it expires, in the **Auto-generated password lifespan (hours)** field, type the number of hours.
4. Click **Save all**.

**Customize the activation message**

To provide information to help troubleshoot activation issues that a user might encounter or to make sure that the activation message that users receive on their computers conforms to your organization’s messaging policies, you can customize the default activation message.

1. In the BlackBerry® Administration Service, on the **Devices** menu, expand **Wireless activations**.
2. Click **Device activation settings**.
3. Click **Edit activation settings**.
4. In the **Email initialization message** section, perform the following actions:
   • In the **Sender address** field, type the email address for the administrator account.
   • In the **Custom activation message** field, type the subject, and message.
5. Click **Save all**.

**Send an activation password to a user**

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. In the search results, click the display name for the user account.
5. In the **Device activation** list, click **Specify activation password**.
6. In the **Activation password** and **Confirm password** fields, type an activation password. The password must not contain special characters. Some BlackBerry devices do not support special characters and do not unlock when a user types a password that contains special characters.
7. In the **Password expiration (hours)** field, type the amount of time that can elapse before the activation password expires.
8. Click **Specify activation password**.

**Send an activation password to multiple users**

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for one or more user accounts.
4. Click **Manage multiple users**.
5. Select the appropriate user accounts.
6. In the **Device activation** list, click **Specify activation password**.
7. In the **Activation password** and **Confirm password** fields, type an activation password. The password must not contain special characters. Some BlackBerry devices do not support special characters and do not unlock when a user types a password that contains special characters.
8. In the **Password expiration (hours)** field, type the amount of time, in hours, that can elapse before the activation password expires.
9. Click **Specify activation password**.

**Option 3: Activating BlackBerry devices over the LAN**

Users can activate BlackBerry® devices by connecting the BlackBerry devices to computers that the BlackBerry® Desktop Manager is associated with. The BlackBerry Desktop Manager must be configured with the user’s work email account. During the activation process, the BlackBerry Desktop Manager prompts the user to associate the BlackBerry device with their work email account and generates encryption keys.

When users complete the activation process, the BlackBerry® Enterprise Server Express sends email messages and organizer data to the BlackBerry devices through the BlackBerry Router. If a connection to the BlackBerry Router is interrupted, the data transfer continues over the wireless network.
Option 4: Activating BlackBerry devices using the BlackBerry Web Desktop Manager

Users can activate their BlackBerry® devices by connecting them to computers using a USB cable or Bluetooth® connection and logging in to the BlackBerry® Web Desktop Manager. During the activation process, the BlackBerry Web Desktop Manager prompts users to associate the BlackBerry device with their email accounts and generate encryption keys.

When users complete the activation process, the BlackBerry® Enterprise Server Express synchronizes email messages and organizer data to BlackBerry devices through the BlackBerry Router. If a connection to the BlackBerry Router is interrupted, the data transfer continues over the wireless network.

Option 5: Activating BlackBerry devices over an enterprise Wi-Fi network

Users can activate Wi-Fi® enabled BlackBerry® devices over an enterprise Wi-Fi network in environments that have the following characteristics:

- BlackBerry devices can connect to the enterprise Wi-Fi network but cannot connect to the BlackBerry® Infrastructure.
- Users did not install BlackBerry® Desktop Manager on their computers and cannot access BlackBerry® Web Desktop Manager.
- You want to deploy and activate a large number of BlackBerry devices.

To activate BlackBerry devices over the enterprise Wi-Fi network, you must configure the BlackBerry Router as an SMTP client (also known as a Mail User Agent). As an SMTP client, the BlackBerry Router communicates with an SMTP server, that sends an ETP message to the user. The ETP message is the email message that the BlackBerry Router sends to the user’s mailbox during the activation process.

You can configure the BlackBerry Router to act as a gateway for BlackBerry device activations over the enterprise Wi-Fi network and as a gateway for other network traffic such as email messages, data, or calendar synchronization, or to act only as a gateway for BlackBerry device activations over the enterprise Wi-Fi network. If you choose to configure the BlackBerry Router only as a gateway for BlackBerry device activations over the enterprise Wi-Fi network, you must configure the BlackBerry Router as part of a chain of BlackBerry Router instances and make sure that one or more BlackBerry Router instances in the chain can act as a gateway for other network traffic.

For more information about activating devices that are associated with the BlackBerry Internet Service over the wireless network, visit www.blackberry.com/go/serverdocs to see the Activating Devices That are Associated With the BlackBerry Internet Service Over the Wireless Network Technical Note.

Prerequisites: Configuring a BlackBerry Router for BlackBerry device activations over the enterprise Wi-Fi network

- On the computer that you installed the BlackBerry® Router, or on a remote computer, configure an SMTP service that the BlackBerry Router can use. For more information, see the documentation for the Windows Server®.
To restrict the BlackBerry Router so that it acts only as a gateway for BlackBerry device activations over the enterprise Wi-Fi® network, on a computer that does not host a BlackBerry® Enterprise Server Express, install a BlackBerry Router whose only purpose is to provide a connection to Wi-Fi enabled BlackBerry devices over the enterprise Wi-Fi network. Configure the BlackBerry Router as part of a chain of BlackBerry Router instances and make sure that one or more BlackBerry Router instances in the chain can act as a gateway for other network traffic such as email messages, data, or calendar synchronization.

Verify that the wireless access points can connect to the BlackBerry Router that you configured for BlackBerry device activations over the enterprise Wi-Fi network.

Verify that each BlackBerry Enterprise Server Express can connect to a BlackBerry Router that you configured for BlackBerry device activations over the enterprise Wi-Fi network.

Create a user account and activation password on the BlackBerry Enterprise Server Express for each new BlackBerry device.

**Configure a BlackBerry Router to permit BlackBerry device activations over the enterprise Wi-Fi network**

1. On the computer that hosts the BlackBerry® Router, on the taskbar, click **Start > Programs > BlackBerry Enterprise Server > BlackBerry Server Configuration**.
2. On the **OTA WIFI Activation** tab, select the **Permit wireless activation in your WLAN environment** check box.
3. Optionally, to restrict the BlackBerry Router so that it acts as a gateway for wireless activations over the enterprise Wi-Fi® network and not as a gateway for other network traffic such as email messages, data, or calendar synchronization, select the **Prevent all serial bypass traffic through this router except WLAN activations** check box. Only restrict the BlackBerry Router if you configured more than one BlackBerry Router instance.
4. To specify how the BlackBerry Router locates the SMTP server, in the **Activation Gateway Settings** section, select one of the following options:
   - To permit the BlackBerry Router to determine which SMTP server it uses for ETP traffic based on the mail exchange record of the host domain, select **Use MX Lookup to obtain SMTP server**.
   - To provide the SMTP server name and port number for the BlackBerry Router, select **Explicitly provide SMTP server name and port**. Type the server name and the server port number for the SMTP server.
5. If the SMTP server requires authentication, specify the SMTP login name and SMTP password.
6. In the **From address for ETP messages** field, type the email address that you want to use as the From address. The ETP message is the email message that the BlackBerry Router sends to the users' mailboxes during the activation process.
7. Click **Apply**.
8. Click **OK**.
9. In the Windows® Services, restart the BlackBerry Router.

**After you finish:** Instruct users to activate the Wi-Fi enabled BlackBerry devices.
Activate a Wi-Fi enabled BlackBerry device

If you want to activate a Wi-Fi® enabled BlackBerry® device using the enterprise Wi-Fi network, you can instruct a BlackBerry user to perform the following task on the BlackBerry device. If you want to reactivate a BlackBerry device, you must create a new activation password for the BlackBerry device.

1. On the BlackBerry device, in the device options, click **Advanced Options**.
2. Click **Enterprise Activation**.
3. Type the activation email address.
4. Type the activation password.
5. In the **Activation Server Address** field, type the IP address for the BlackBerry Router that the BlackBerry device can use to activate over the enterprise Wi-Fi network.
6. In the menu, click **Activate**.

**After you finish:**
- For more information, see the user guide for the BlackBerry device.
- To view the activation status, in the BlackBerry Administration Service, on the **Wireless > View activations** page, search for the user account. Confirm that the activation is successful.

Managing BlackBerry Java Applications and BlackBerry Device Software

You can use the BlackBerry® Administration Service to install and manage the BlackBerry® Device Software and BlackBerry Java® Applications on BlackBerry devices.

To send BlackBerry Java Applications to devices, you must first add the applications to the application repository. You can use the application repository to store and manage all versions of the BlackBerry Java Applications that you want to install on, update on, or remove from devices.

In the BlackBerry Administration Service, you create software configurations to specify the versions of the BlackBerry Device Software and BlackBerry Java Applications that you want to install on, update on, or remove from devices. You also use software configurations to specify which applications are required, optional, or not permitted. When you create a software configuration, you must also specify whether users can install applications that are not listed in the software configuration.

When you add a BlackBerry Java Application to a software configuration, you must assign an application control policy to the application to specify what resources the application can access. You can use default application control policies or you can create and use custom application control policies. If you permit users to install unlisted applications, you must create an application control policy for unlisted applications that specifies what resources the applications can access.

When you assign a software configuration to a group or individual user accounts, the BlackBerry Administration Service creates a deployment job to install the BlackBerry Device Software and BlackBerry Java Applications on devices and to apply access control policies to the devices. A deployment job consists of a number of tasks. Each task manages the delivery of a specific object (for example, a BlackBerry Java Application or an access control policy) by communicating with the appropriate BlackBerry® Enterprise Server Express components.

If you assign more than one software configuration to a user account, all of the settings in the multiple software configurations are applied to the user’s device. The BlackBerry Enterprise Server Express resolves conflicting settings using predefined reconciliation rules and prioritized rankings that you can specify using the BlackBerry Administration Service. After you install the BlackBerry Device Software and BlackBerry Java Applications on devices, you can view details about how the BlackBerry Administration Service resolved software configuration conflicts.

For more information about installing and managing the BlackBerry Device Software on devices, visit www.blackberry.com/go/serverdocs to see the BlackBerry Device Software Update Guide.
Developing BlackBerry Java Applications for BlackBerry devices

Application developers can use the BlackBerry® Java® Development Environment or the BlackBerry® Java® Plug-in for Eclipse® to create and test BlackBerry Java Applications for BlackBerry devices, and to package BlackBerry Java Applications to install them on BlackBerry devices using a user’s computer or over the wireless network. Application developers can use the BlackBerry JDE or the BlackBerry Java Plug-in for Eclipse to generate .cod files that contain the compiled application code for a BlackBerry Java Application. BlackBerry devices execute .cod files to run BlackBerry Java Applications. The BlackBerry JDE and the BlackBerry Java Plug-in for Eclipse also include tools to generate .jad files or .alx descriptor files that provide information about a BlackBerry Java Application that is used when the application is compiled.

MIDlets are Java applications that conform to the MIDP standard and can run on any mobile device that runs Java applications. Most MIDlets are distributed as .jar files. The BlackBerry JDE and the BlackBerry Java Plug-in for Eclipse include tools that you can use to convert existing MIDlets that are in .jad and .jar file formats to .cod file formats for use on BlackBerry devices.

For more information about developing and customizing BlackBerry Java Applications, visit www.blackberry.com/developers.

Preparing to distribute BlackBerry Java Applications

To send a BlackBerry® Java® Application to BlackBerry devices, the application developer must create a .zip file that contains the necessary application files and an .alx file that contains information about the application. If a directory structure is described in the .alx file, that directory structure must be represented in the .zip file.

For more information about creating BlackBerry Java Applications and .alx files, visit www.blackberry.com/developers to see the BlackBerry Java Development Environment Development Guide.

Before you distribute BlackBerry Java Applications, you must specify a shared network folder for BlackBerry Java Applications using the BlackBerry Administration Service. This shared network folder must not be the same network share location that is used for BlackBerry® Device Software, and it must not be located in <drive>\Program Files \Common Files\Research In Motion. The BlackBerry Administration Service accesses the shared network folder to install BlackBerry Java Applications on BlackBerry devices. Do not add application files to the shared network folder or make changes to the files that the BlackBerry Administration Service stores in the shared network folder.

To make a BlackBerry Java Application available for installation on BlackBerry devices, you must add the application to the BlackBerry Administration Service application repository. After you add an application to the application repository, you can add the application to a software configuration, specify whether the application is required, optional, or not permitted on BlackBerry devices, and assign an application control policy to the application to control the access permissions for the application. You assign software configurations to user accounts to install or upgrade BlackBerry Java Applications on BlackBerry devices, or to remove BlackBerry Java Applications from BlackBerry devices.
Specify a shared network folder for BlackBerry Java Applications

You must specify a shared network folder for BlackBerry® Java® Applications using the BlackBerry Administration Service before you add any BlackBerry Java Applications to the application repository. The BlackBerry Administration Service must access the shared network folder to install BlackBerry Java Applications on BlackBerry devices. Do not add application files to the shared network folder or make changes to the files that the BlackBerry Administration Service stores in the shared network folder.

**Before you begin:** Create a shared network folder on the network that hosts the BlackBerry® Enterprise Server Express. This shared network folder must not be the same network share location that is used for BlackBerry® Device Software, and it must not be located in `<drive>:\Program Files\Common Files\Research In Motion`.

The administration accounts that you use for the BlackBerry Administration Service must have write permissions for the shared network folder. The administration accounts that run the BlackBerry Administration Service Application Server service must have write permissions for the shared network folder. BlackBerry devices and the computers that host the BlackBerry Enterprise Server Express instances must have access to the shared network folder.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view**.
2. Click **BlackBerry Administration Service**.
3. Click **Edit component**.
4. In the **Software management** section, in the **BlackBerry Administration Service application shared network drive** field, type the path of the shared network folder using the following format: \\<BlackBerry_Administration_Service_computer_name\>\shared_folder>.
   The shared network path must be typed in UNC format (for example, \ComputerName\Applications\Testing).
5. Click **Save all**.

Add a BlackBerry Java Application to the application repository

To send a BlackBerry® Java® Application to BlackBerry devices, you must first add the BlackBerry Java Application bundle to the application repository. To send an updated version of a BlackBerry Java Application to BlackBerry devices, you must first add the updated bundle to the application repository.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **Software > Applications**.
2. Click **Add or update applications**.
3. In the **Application location** section, click **Browse**. Navigate to the BlackBerry Java Application bundle that you want to add to, or update in, the application repository.
4. Click **Next**.
5. Click **Add application**.
Specify keywords for a BlackBerry Java Application

You can specify keywords for a BlackBerry® Java® Application. You can use the keywords to search for the application in the application repository.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand Software > Applications.
2. Click Manage applications.
3. Search for an application.
4. In the search results, click the name of an application.
5. Click Edit application.
6. In the Application keywords field, type a keyword.
7. Click the Add icon.
8. Repeat steps 6 and 7 for each keyword that you want to add.
9. Click Save all.

Configuring application control policies

When you add a BlackBerry® Java® Application to a software configuration so that you can install the application on BlackBerry devices, you must specify an application control policy that you want to apply to the BlackBerry Java Application. Application control policies control the data and APIs that BlackBerry Java Applications can access on BlackBerry devices, and the external data sources and network connections that BlackBerry Java Applications can access.

The BlackBerry Administration Service includes a standard application control policy for BlackBerry Java Applications that you classify as required, optional, or not permitted. You can change the default settings of the standard application control policies or create custom application control policies for a BlackBerry Java Application.

For more information about configuring settings for application control policy rules, visit www.blackberry.com/go/serverdocs to see the BlackBerry Enterprise Server Express Policy Reference Guide.

Standard application control policies

The BlackBerry® Enterprise Server Express includes the following standard application control policies.

<table>
<thead>
<tr>
<th>Application control policy</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard Required</td>
<td>When you apply the application control policy to a BlackBerry® Java® Application, rule settings require that the BlackBerry Java Application be installed and permitted to run on BlackBerry devices. BlackBerry devices install the application automatically.</td>
</tr>
</tbody>
</table>
### Change a standard application control policy

When you add a BlackBerry® Java® Application to a software configuration, you must assign an application control policy to the BlackBerry Java Application. Based on the requirements of your organization's environment, you can change the default settings for the standard application control policies.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **Software > Applications**.
2. Click **Manage default application control policies**.
3. Click the standard application control policy that you want to change.
4. Click **Edit application control policy**.
5. On the **Access settings** tab, in the **Settings** section, change the settings for the standard application control policy.
6. Click **Save all**.

### Create custom application control policies for a BlackBerry Java Application

After you add a BlackBerry® Java® Application to the application repository, you can configure the application to use the standard application control policies, or you can create custom application control policies for the application. If you want a BlackBerry Java Application to use custom application control policies, you must create the custom application control policies before you add the application to a software configuration. When you add the application to a software configuration, you can select which custom application control policy you want to apply to the application.

If you add the BlackBerry Java Application to multiple software configurations and you assign different custom access control policies to the BlackBerry Java Application in the different software configurations, you must set the priority for the custom application control policies. This priority determines which custom application control policy the BlackBerry Policy Service applies if you assign multiple software configurations to a user account.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **Software > Applications**.
2. Click **Manage applications**.

<table>
<thead>
<tr>
<th>Application control policy</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard Optional</td>
<td>When you apply the application control policy to a BlackBerry Java Application, rule settings make the BlackBerry Java Application optional on the BlackBerry device. Users can install and run the BlackBerry Java Application on their BlackBerry devices.</td>
</tr>
<tr>
<td>Standard Disallowed</td>
<td>When you apply the application control policy to a BlackBerry Java Application, rule settings prevent users from installing the BlackBerry Java Application on BlackBerry devices. Users cannot install and run the BlackBerry Java Application on their BlackBerry devices.</td>
</tr>
</tbody>
</table>
3. Search for a BlackBerry Java Application.
4. In the search results, click a BlackBerry Java Application.
5. In the Application versions section, click the version of the application that you want to create a custom application control policy for.
6. Click Edit application.
7. On the Application control policies tab, in the Settings section, select the Use custom application control policies option.
8. Perform any of the following tasks:

<table>
<thead>
<tr>
<th>Task</th>
<th>Steps</th>
</tr>
</thead>
</table>
| Create an application control policy for required BlackBerry Java Applications. | a. In the Required application name field, type a name for the application control policy.  
b. In the Settings section, configure the settings for the application control policy.  
c. Click the Add icon.  
d. Repeat steps a to c for each application control policy that you want to create. |
| Create an application control policy for optional BlackBerry Java Applications. | a. In the Optional application name field, type a name for the application control policy.  
b. In the Settings section, configure the settings for the application control policy.  
c. Click the Add icon.  
d. Repeat steps a to c for each application control policy that you want to create. |
| Create an application control policy for BlackBerry Java Applications that are not permitted. | a. In the Disallowed application name field, type a name for the application control policy.  
b. Click the Add icon.  |

9. If necessary, in each section, click the up and down arrows to set the priority for the application control policies.
10. Click Save all.

**IT policy rules take precedence on the device**

IT policy rule settings override application control policy rule settings. For example, if you change the Allow Internal Connections IT policy rule to No for BlackBerry® devices, and if the devices have an application control policy set that allows a specific application to make internal connections, the application cannot make internal connections.
The device revokes an application control policy and resets if the permissions of the application it is applied to become more restrictive. On supported devices, users can make application permissions more restrictive than what the BlackBerry® Enterprise Server Express administrator sets but users cannot make the permissions less restrictive.

**Application control policies for unlisted applications**

When you create a software configuration and assign it to user accounts so that you can send BlackBerry® Device Software, BlackBerry Java® Applications, and standard application settings to BlackBerry devices, you must configure whether the software configuration permits users to install and use applications that are not included in the software configuration (also known as unlisted applications). When you configure whether unlisted applications are permitted and optional or not permitted on BlackBerry devices, you must assign an application control policy for unlisted applications to the software configuration.

An application control policy for unlisted applications determines what unlisted applications are permitted on BlackBerry devices and what data the unlisted applications can access on BlackBerry devices. The BlackBerry Administration Service has two standard application control policies for unlisted applications: one for unlisted applications that are optional, and one for unlisted applications that are not permitted. You can change the default settings of the standard application control policy for unlisted applications that are optional, or you can create custom application control policies for unlisted applications that are optional.

For more information about the rule settings in application control policies for unlisted applications, see the BlackBerry Enterprise Server Express Policy Reference Guide.

**Change the standard application control policy for unlisted applications that are optional**

For more information about the rule settings in application control policies for unlisted applications, see the BlackBerry Enterprise Server Express Policy Reference Guide.

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Software.
2. Click Manage application control policies for unlisted applications.
3. Click the Standard Unlisted Optional application control policy.
4. Click Edit application control policy.
5. On the Access settings tab, in the Settings section, configure the settings for the application control policy.
6. Click Save all.

**Create an application control policy for unlisted applications**

The BlackBerry® Administration Service includes two default application control policies for unlisted applications: one for unlisted applications that you permit on BlackBerry devices, and one for unlisted applications that you do not permit on BlackBerry devices. You can also create custom application control policies for unlisted applications that are optional.
For more information about the rule settings in application control policies for unlisted applications, see the *BlackBerry Enterprise Server Express Policy Reference Guide*.

1. In the BlackBerry Administration Service, on the *BlackBerry solution management* menu, expand **Software**.
2. Click **Create an application control policy for unlisted applications**.
3. In the **Application control policy information** section, in the **Name** field, type a name for the application control policy for unlisted applications.
4. Click **Save**.
5. On the *BlackBerry solution management* menu, click **Manage application control policies for unlisted applications**.
6. Click the application control policy that you created.
7. Click **Edit application control policy**.
8. On the **Access settings** tab, in the **Settings** section, configure the settings for the application control policy.
9. Click **Save all**.

**Configure the priority of application control policies for unlisted applications**

You can assign multiple software configurations to user accounts. You can assign different application control policies for unlisted applications to different software configurations. You must configure the priority of the different application control policies for unlisted applications so that the BlackBerry® Policy Service can determine which application control policies to apply to user accounts when you assign multiple software configurations to user accounts.

1. In the BlackBerry Administration Service, on the *BlackBerry solution management* menu, expand **Software**.
2. Click **Manage application control policies for unlisted applications**.
3. Click **Set priority of application control policies for unlisted applications**.
4. Click the up and down arrows to set the priority of application control policies for unlisted applications.
5. Click **Save**.

**Creating software configurations**

You can use software configurations to perform the following actions on BlackBerry® devices:

- install, upgrade, or remove BlackBerry Java® Applications over the wireless network or using the BlackBerry® Web Desktop Manager
- assign access control policies to BlackBerry Java Applications to control application permissions and the data that the applications can access
- specify that a BlackBerry Java Application is not permitted
- specify whether BlackBerry Java Applications that you do not include in the software configuration are permitted or not permitted
• configure the access permissions for BlackBerry Java Applications that you do not include in the software configuration
• install or upgrade the BlackBerry® Device Software over the wireless network or using the BlackBerry Web Desktop Manager
• specify standard application settings

You can assign a software configuration to a group, multiple user accounts, or a single user account. After you assign a software configuration, you can change the settings in the software configuration to manage the BlackBerry Java Applications, BlackBerry Device Software, and standard application settings on BlackBerry devices. You can configure settings in the BlackBerry Administration Service to control how the BlackBerry Administration Service sends BlackBerry Java Applications, BlackBerry Device Software, and standard application settings in software configurations to BlackBerry devices.

If you assign multiple software configurations to a user account, the settings in each software configuration are applied to the BlackBerry device. The BlackBerry Administration Service uses a set of rules to resolve conflicting settings in the multiple software configurations.

The BlackBerry Enterprise Server Express Administration Guide contains information about creating software configurations to manage BlackBerry Java Applications on BlackBerry devices. For more information about using software configurations to manage BlackBerry Device Software on BlackBerry devices, visit www.blackberry.com/go/serverdocs to see the BlackBerry Device Software Upgrade Guide.

Reconciliation rules for conflicting settings in software configurations, 99

Create a software configuration

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Software.
2. Click Create a software configuration.
3. In the Configuration information section, in the Name field, type a name for the software configuration.
4. In the Disposition for unlisted applications drop-down list, perform one of the following actions:
   • To permit users to install applications that are not included in the software configuration on their BlackBerry devices, click Optional.
   • To prevent users from installing applications that are not included in the software configuration on their BlackBerry devices, click Disallowed.
5. In the Application control policy for unlisted applications drop-down list, click the application control policy for unlisted applications that you want to assign to the software configuration.
6. Click Save.

After you finish: Add BlackBerry® Device Software configurations and BlackBerry Java® Applications to the software configuration.
Add a BlackBerry Java Application to a software configuration

You must add a BlackBerry® Java® Application to a software configuration and assign the software configuration to user accounts to install the BlackBerry Java Application on BlackBerry devices over the wireless network. To upgrade an application, you must add the new version of the application to the appropriate software configuration. The BlackBerry® Enterprise Server Express upgrades the application that is on BlackBerry devices to the new version.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **Software**.
2. Click **Manage software configurations**.
3. Click the software configuration that you want to add a BlackBerry Java Application to.
4. Click **Edit software configuration**.
5. On the **Applications** tab, click **Add applications to software configuration**.
6. Search for the BlackBerry Java Applications that you want to add to the software configuration.
7. In the search results, select a BlackBerry Java Application that you want to add to the software configuration.
8. In the **Disposition** drop-down list for the BlackBerry Java Application, perform one of the following actions:
   - To install the BlackBerry Java Application automatically on BlackBerry devices, and to prevent users from removing the application, click **Required**.
   - To permit users to install and remove the BlackBerry Java Application, click **Optional**.
   - To prevent users from installing a BlackBerry Java Application on BlackBerry devices, click **Disallowed**.
9. In the **Application data** section, in the **Application control policy** drop-down list, click an application control policy to apply to the BlackBerry Java Application.
10. If necessary, in the **Deployment** drop-down list, perform one of the following actions:
    - To install the application on BlackBerry devices over the wireless network, click **Wireless**.
    - To install the application on BlackBerry devices using a USB connection to the user’s computer and the BlackBerry® Web Desktop Manager, click **Wired**.
11. Repeat steps 6 to 10 for each BlackBerry Java Application that you want to add to the software configuration.
12. Click **Add to software configuration**.
13. Click **Save all**.

Assign a software configuration to a group

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **Group**.
2. Click **Manage groups**.
3. Click a group.
4. Click **Edit group**.
5. On the **Software configuration** tab, in the **Available software configurations** list, click a software configuration.
6. Click **Add**.
7. Repeat steps 5 and 6 for each software configuration that you want to assign.
8. Click **Save all**.
Assign a software configuration to multiple user accounts

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for one or more user accounts.
4. Select one or more user accounts.
5. In the Add to user configuration list, click Add software configuration.
6. In the Available software configurations list, click the software configuration that you want to assign to the user accounts.
7. Click Add.
8. Repeat steps 6 and 7 for each software configuration that you want to assign to the user accounts.
9. Click Save.

Assign a software configuration to a user account

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for a user account.
4. In the search results, click the display name for the user account.
5. Click Edit user.
6. On the Software configuration tab, in the Available software configurations list, click the appropriate software configuration.
7. Click Add.
8. Repeat steps 6 and 7 for each software configuration that you want to assign.
9. Click Save all.
Install BlackBerry Java Applications on a BlackBerry device at a central computer

If you do not want to install BlackBerry® Java® Applications on a BlackBerry device over the wireless network, and you do not want the user to install the BlackBerry Java Applications using the BlackBerry® Web Desktop Manager or BlackBerry® Desktop Software, you can install the BlackBerry Java Applications on a BlackBerry device by connecting the BlackBerry device to a central computer that can access the BlackBerry Administration Service.

Before you begin:
• Assign a software configuration with the necessary BlackBerry Java Applications to the appropriate user account.
• To permit the BlackBerry Administration Service to connect to a BlackBerry device that is attached to the computer that hosts the BlackBerry Administration Service by a USB connection, add the web address of the BlackBerry Administration Service to the list of trusted web sites in the web browser. Log in to the BlackBerry Administration Service again.
• Verify that the central computer can access the BlackBerry Administration Service.
• Connect the BlackBerry device that is associated with the user account to the central computer.

1. In the BlackBerry Administration Service, on the Devices menu, expand Attached devices.
2. Click Device software.
3. Click Automatic installation of applications on the BlackBerry device.
4. Complete the instructions on the screen.

View the status of a job

After you assign a software configuration to user accounts or change an existing software configuration that you assigned to user accounts, the BlackBerry® Administration Service creates a job to deliver BlackBerry® Device Software, BlackBerry Java® applications, or application settings to BlackBerry devices. If you assign an IT policy to user accounts or change an existing IT policy, a job sends the IT policy changes to BlackBerry devices. You can view the status of a job to determine if it is ready to run, currently running, completed, or completed with task failures.

1. In the BlackBerry Administration Service, on the Devices menu, expand Deployment jobs.
2. Click Manage deployment jobs.
3. Search for a job.
4. In the search results, in the Status column, view the status of the job.
5. To view more information about a job or to change a job, click the ID of the job.

Related topics
Stopping a job that is running, 97
View the status of a task

Each deployment job consists of multiple tasks. Each task delivers a specific object or setting to a BlackBerry® device that carries out an action, for example, updating BlackBerry® Device Software, installing or removing a BlackBerry Java® Application, or applying updated IT policy settings or application settings. You can view the status of tasks. If a BlackBerry® Enterprise Server Express does not complete a task, you can view error messages that help you troubleshoot the task failure.

1. In the BlackBerry Administration Service, on the Devices menu, expand Deployment jobs.
2. Click Manage deployment job tasks.
3. Search for a task.
4. In the search results, in the Status column, view the status of the task.
5. To view more information about a task, click More.

Error messages: BlackBerry Java Application tasks

To troubleshoot errors that display for a task when you send a BlackBerry® Java® Application to a BlackBerry device, or update a BlackBerry Java Application on a BlackBerry device, you can try to determine the cause by collecting the following information:

- BlackBerry Policy Service log files from the day the issue was reported (log level 4 recommended)
- BlackBerry Dispatcher log files from the day the issue was reported (log level 4 recommended)
- BlackBerry Administration Service log files from the day the issue was reported (log level 4 recommended)
- BlackBerry device information (for example, the BlackBerry device model, BlackBerry® Device Software version, wireless service provider, IT policy assigned to the BlackBerry device, service books on the BlackBerry device, and so on)
- event log of the BlackBerry device from the day the issue was reported

If the preceding information does not help you to address the issue, you can collect the following information:

- BlackBerry Policy Service log files from the day the issue was reported (log level 6 recommended)
- system event logs
- copy of the BlackBerry Configuration Database
- SQL trace of the BlackBerry Policy Service that communicates with the BlackBerry Configuration Database

For information about changing the log level for a BlackBerry® Enterprise Server Express component, visit www.blackberry.com/support to read article KB04342. For information about obtaining the event log for a BlackBerry device, visit www.blackberry.com/support to read article KB05349.

If the recommended administrative action for an error message does not resolve the issue, contact RIM Technical Support.

Sequence Processing Stopped due to error processing SEND_APC_APP command
The BlackBerry Policy Service sends application data to a BlackBerry device as a group of application modules. If the BlackBerry Policy Service does not deliver one of the application modules to the BlackBerry device, the remaining application modules are not delivered to the BlackBerry device.

You can try to resend the BlackBerry Java Application to the BlackBerry device.

**SendApp failed due to error getting application data, processing stopped**

An error occurred when the BlackBerry Policy Service tried to retrieve the data that it required to install the BlackBerry Java Application.

You can verify that the BlackBerry Policy Service can access the network share that you use to store the application files.

**QueueModule failed, processing stopped**

An error occurred when the BlackBerry Policy Service tried to process the application modules and send the application modules to the BlackBerry device.

You can verify that the BlackBerry Policy Service can access the network share that stores the application files.

**Device timed out waiting for module**

The BlackBerry device reported a timeout failure while waiting for the application modules.

You can resend the BlackBerry Java Application to the BlackBerry device. If the second attempt to install the BlackBerry Java Application is not successful, in the log files that you collected, locate the user account that experienced the issue. Trace the installation activity.

**Device reported insufficient memory to install module**

The BlackBerry device does not have enough application memory available to install the application modules.

You can instruct the user to make more application memory available on the BlackBerry device. Resend the BlackBerry Java Application.

**Device reported insufficient privileges to install module**

The BlackBerry device does not have the necessary permissions to install the BlackBerry Java Application.

You can verify that the BlackBerry device is configured with the necessary permissions to install a BlackBerry Java Application. Resend the BlackBerry Java Application.

**Device reported invalid version in packet, supported version is %s**

The BlackBerry Java Application is not compatible with the BlackBerry Device Software version that is running on the BlackBerry device.

You can verify that the BlackBerry Java Application is compatible with the BlackBerry Device Software version that is running on the BlackBerry device.

**Device reported Data Format Error in packet while installing module**
An error occurred in the BlackBerry Policy Service that prevented the BlackBerry device from installing the BlackBerry Java Application.

In the log files that you collected, locate the user account that experienced the issue. Trace the installation activity.

Device reported a %s error while installing module

Device reported a general failure installing the module

Device reported a security violation while installing the application

Device reported insufficient app data while installing module

Device reported insufficient body data while installing module

Device reported invalid app data length while installing module

Device reported invalid command while installing module

Device reported invalid module hash while installing module

Device reported that the module save failed

Device reported that there was an incomplete module
  The BlackBerry device identified a formatting error in the application data before or during the installation process.

  You can verify that the application files are formatted properly and try to send the BlackBerry Java Application to the BlackBerry device again. If your second try at the installation is not successful, in the log files that you collected, locate the user account that experienced the issue. Trace the installation activity.

Incomplete ACK data for APPD request
  The BlackBerry Policy Service did not receive an acknowledgment message from a BlackBerry device that indicates that the BlackBerry Java Application was installed.

  You can verify that the BlackBerry device is turned on and is located in a wireless coverage area. Resend the BlackBerry Java Application.

For the command: %s Device reported a general failure

For the command: %s Device reported non command handler for request

For the command: %s Device reported security violation

For the command: %s Device reported unable to decrypt

For the command: %s Device reported key mismatch
For the command: %s Device reported unsupported command version

For the command: %s Device reported code base error

For the command: %s Device reported a general failure installing the module

The BlackBerry device cannot execute the command to install or update the BlackBerry Java Application.

In the log files that you collected, locate the user account that experienced the issue. Trace the installation activity.

Error messages: BlackBerry Device Software tasks

To troubleshoot errors that display for a task when you are updating BlackBerry® Device Software on a BlackBerry device, you can try to determine the cause by collecting the following information:

• BlackBerry Policy Service log files from the day the issue was reported (log level 4 recommended)
• BlackBerry Dispatcher log files from the day the issue was reported (log level 4 recommended)
• BlackBerry Administration Service log files from the day the issue was reported (log level 4 recommended)
• BlackBerry device information (for example, the BlackBerry device model, BlackBerry Device Software version, wireless service provider, IT policy assigned to the BlackBerry device, service books on the BlackBerry device, and so on)
• event log of the BlackBerry device from the day the issue was reported
• error report from the update application; instruct users to view the details of the errors reported by the update application and to send error reports to an administrative email address that you must specify

If the preceding information does not address the issue, you can collect the following information:

• BlackBerry Policy Service log files from the day the issue was reported (log level 6 recommended)
• system event logs
• copy of the BlackBerry Configuration Database
• SQL trace of the BlackBerry Policy Service that communicates with the BlackBerry Configuration Database

For information about changing the log level for a BlackBerry® Enterprise Server Express component, visit www.blackberry.com/support to read article KB04342. For information about obtaining the event log for a BlackBerry device, visit www.blackberry.com/support to read article KB05349.

If the recommended administrative action for an error message does not resolve the issue, contact RIM Technical Support.

Available upgrade rejected

You can determine the reason for the error message and determine the status code that is associated with the error by viewing the event log of the BlackBerry device.

0x01 not supported by device: The BlackBerry device model or the current version of the BlackBerry Device Software on the BlackBerry device does not support the BlackBerry Device Software update.

You can verify that the BlackBerry device model and the current BlackBerry Device Software version support the BlackBerry Device Software update.
**0x02 not consistent with device version or vendorid:** The BlackBerry device model, the current version of the BlackBerry Device Software on the BlackBerry device, or the vendor ID that is associated with the BlackBerry device does not support the BlackBerry Device Software update.

You can verify that the BlackBerry device model, the current BlackBerry Device Software version, and the vendor ID that are associated with the BlackBerry device support the BlackBerry Device Software update.

**0x03 disallowed by IT policy:** An IT policy rule in an IT policy that you assigned to the user account does not permit BlackBerry Device Software updates over the wireless network.

You can verify that the IT policy rule settings in the IT policy that you assigned to the user account permits BlackBerry Device Software updates over the wireless network.

**0x05 duplicate:** A previous request to install the same BlackBerry Device Software version has already been sent to the BlackBerry device.

**0x07 bad request:** An error occurred when the BlackBerry® Infrastructure processed the request to update the BlackBerry Device Software on the BlackBerry device.

You can try to send the BlackBerry Device Software update again.

**0x08 insufficient storage:** The BlackBerry device does not have enough memory available to update the BlackBerry Device Software.

You can manage the BlackBerry device so that it has enough memory available to update the BlackBerry Device Software (for example, remove applications from the BlackBerry device that are no longer required).

**0x09 reset required:** The user must reset the BlackBerry device to clear a code module condition.

You can instruct the user to reset the BlackBerry device and you can send the BlackBerry Device Software update again.

**0x10 service book flag disabled:** A service book on the BlackBerry device does not permit you to send BlackBerry Device Software updates over the wireless network.

You can verify that the service books on the BlackBerry device permit BlackBerry Device Software updates over the wireless network.

**Available upgrade deferred by user**

**0x01 prior upgrade in progress:** The BlackBerry Device Software update did not complete because a previous BlackBerry Device Software update was in progress.

If the previous BlackBerry Device Software update did not install the correct BlackBerry Device Software version, you can wait until the update completes and then you can send the BlackBerry Device Software update again.

**Upgrade prompt deferred**

**0x02 reset required:** The user must reset the BlackBerry device to clear a code module condition.
You can instruct the user to reset the BlackBerry device. The update application tries to perform the update for up to 72 hours. After 72 hours, the update application performs the update and the user no longer has the option to defer the update.

Upgrade rejected

An error or inconsistency exists in the BlackBerry Device Software files that are available from the BlackBerry Infrastructure.

Upgrade failed, rollback complete

After the update application downloaded and applied the current BlackBerry Device Software patch files to the BlackBerry device, an error occurred when the update application tried to restart the BlackBerry device. As a result, the update application reapplied the previous BlackBerry Device Software files to the BlackBerry device and cancelled the BlackBerry Device Software update.

Available upgrade deleted by administrator

When a BlackBerry Device Software update request either completes or does not complete, this status message displays when the BlackBerry Infrastructure deletes the update request.

Mandatory upgrade failed

After the update application downloaded and applied the current BlackBerry Device Software files to the BlackBerry device, an error occurred when the update application tried to restart the BlackBerry device. As a result, the update application reapplied the previous BlackBerry Device Software files to the BlackBerry device, and cancelled the update.

BlackBerry Administration Service error

An error occurred when the BlackBerry Administration Service processed the request to update the BlackBerry Device Software on a BlackBerry device.

Error messages: Standard application settings tasks

To troubleshoot errors that display for a task when you change the standard application settings on a BlackBerry® device, you can try to determine the cause by collecting the following information:

• BlackBerry Synchronization Service log files from the day the issue was reported (log level 4 recommended)
• BlackBerry Dispatcher log files from the day the issue was reported (log level 4 recommended)
• BlackBerry Administration Service log files from the day the issue was reported (log level 4 recommended)
• BlackBerry device information (for example, the BlackBerry device model, BlackBerry® Device Software version, wireless service provider, IT policy assigned to the BlackBerry device, service books on the BlackBerry device, and so on)
• event log of the BlackBerry device from the day the issue was reported
If the preceding information does not address the issue, you can collect the following information:

- BlackBerry Synchronization Service log files from the day the issue was reported (log level 6 recommended)
- system event logs
- copy of the BlackBerry Configuration Database
- SQL trace of the BlackBerry Synchronization Service that communicates with the BlackBerry Configuration Database

For information about changing the log level for a BlackBerry® Enterprise Server Express component, visit www.blackberry.com/support to read article KB04342. For information about obtaining the event log of a BlackBerry device, visit www.blackberry.com/support to read article KB05349.

If the recommended administrative action for an error message does not resolve the issue, contact RIM Technical Support.

**Restore failed -- error getting value**

The BlackBerry Synchronization Service cannot read the value of the standard application settings because the BlackBerry Configuration Database is unavailable.

Verify that the BlackBerry Synchronization Service can access the BlackBerry Configuration Database. If necessary, restart the BlackBerry Configuration Database.

**Failed to set properties for item**

The BlackBerry Synchronization Service cannot specify the value of the standard application settings because the BlackBerry Configuration Database is unavailable.

Verify that the BlackBerry Synchronization Service can access the BlackBerry Configuration Database. If necessary, restart the BlackBerry Configuration Database.

**Failed to backup data to database**

The BlackBerry Synchronization Service cannot apply the value of the standard application settings because the BlackBerry Configuration Database is unavailable.

Verify that the BlackBerry Synchronization Service can access the BlackBerry Configuration Database. If necessary, restart the BlackBerry Configuration Database.

**Failed to delete item**

The BlackBerry Synchronization Service cannot delete the value of the standard application settings because the BlackBerry Configuration Database is unavailable.

Verify that the BlackBerry Synchronization Service can access the BlackBerry Configuration Database. If necessary, restart the BlackBerry Configuration Database.

**Failed to create an instance of the XML DOM document**

The BlackBerry Synchronization Service cannot create XML data for the standard application settings.

**Failed to load XML document**
The BlackBerry Synchronization Service cannot load XML data for the standard application settings.

**Invalid GUID**
The BlackBerry Synchronization Service received an invalid globally unique identifier from the BlackBerry device.

**Invalid/unknown command**
The BlackBerry Synchronization Service received an invalid command from the BlackBerry device.

**Related topics**
Restarting BlackBerry Enterprise Server Express components, 277

**Error messages: IT policy tasks**

To troubleshoot errors that display for a task when you send an IT policy to a BlackBerry® device or update an IT policy on a BlackBerry device, you can try to determine the cause by collecting the following information:

- BlackBerry Policy Service log files from the day the issue was reported (log level 4 recommended)
- BlackBerry Dispatcher log files from the day the issue was reported (log level 4 recommended)
- BlackBerry Administration Service log files from the day the issue was reported (log level 4 recommended)
- BlackBerry device information (for example, the BlackBerry device model, BlackBerry® Device Software version, wireless service provider, IT policy assigned to the BlackBerry device, service books on the BlackBerry device, and so on)
- event log of the BlackBerry device from the day the issue was reported

If the preceding information does not help you to address the issue, you can collect the following information:

- BlackBerry Policy Service log files from the day the issue was reported (log level 6 recommended)
- system event logs
- copy of the BlackBerry Configuration Database
- SQL trace of the BlackBerry Policy Service that communicates with the BlackBerry Configuration Database

For information about changing the log level for a BlackBerry® Enterprise Server Express component, visit www.blackberry.com/support to read article KB04342. For information about obtaining the event log for a BlackBerry device, visit www.blackberry.com/support to read article KB05349.

If the recommended administrative action for an error message does not resolve the issue, contact Research In Motion Technical Support.

**Reject Security Violation**

**Reject Authentication Failed**
Data might not have been permanently deleted from the BlackBerry device before you assigned the BlackBerry device to a new user account and activated the BlackBerry device again.

You can permanently delete the data on the BlackBerry device and activate the BlackBerry device again.

**Invalid password**

**Set Password Failed**
You sent the Specify new device password and lock device IT administration command to a BlackBerry device and the password might not have satisfied the password criteria that the BlackBerry device user configured on the BlackBerry device.

You can resend the Specify new device password and lock device IT administration command to the BlackBerry device and specify a password that satisfies the password criteria that you configured using IT policy rules.

**Sequence Processing Stopped due to error processing SET_IT_POLICY_COMMAND command**

The BlackBerry Policy Service can send the IT policy data to a BlackBerry device in a group of commands. If the IT policy command is not delivered to the BlackBerry device, the remaining commands in the group are not delivered to the BlackBerry device.

You can try to resend the IT policy to the BlackBerry device. You can also try to resend the service books to the BlackBerry device.

### Stopping a job that is running

After you assign a software configuration to user accounts or change an existing software configuration that you already assigned to user accounts, the BlackBerry® Administration Service creates a job to deliver BlackBerry® Device Software, BlackBerry Java® Applications, or application settings to BlackBerry devices. If you assign an IT policy to user accounts or change an existing IT policy, a job sends the IT policy changes to BlackBerry devices. If you want to make changes to a job that is running, you can stop a job.

When you stop a job, the BlackBerry® Enterprise Server Express does not process the remaining tasks in the job, and the BlackBerry Administration Service changes the scheduled start time for the job to the following day. The job returns to a ready to run status. You can make changes to the start time, priority, and distribution settings of the job. If you do not change the start time for the job, the BlackBerry Enterprise Server Express delivers the job on the following day using the default job schedule settings. When the job starts again, the BlackBerry Enterprise Server Express processes the remaining tasks in the job.

If you want to delete a job, change the start date of the job to a date that exceeds the job failure period that you configured in the job schedule settings. The default job failure period is 30 days.

#### Related topics

- Change default settings for a job schedule, 201
- Specify the start time and priority for a job, 207

### Stop a job that is running

1. In the BlackBerry® Administration Service, on the Devices menu, expand Deployment jobs.
2. Click Manage deployment jobs.
3. Search for the job that you want to stop.
4. In the search results, click the ID of the job that you want to stop.
   - You can only stop jobs with a Running status.
5. Click Stop Current Execution.
6. Click Yes - Stop Current Execution.

### View the users that have a BlackBerry Java Application installed on their BlackBerry devices

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand **Software > Applications**.
2. Click **Manage applications**.
3. Search for an application.
4. In the search results, click the name of an application.
5. In the **Application versions** section, click a version of the application.
6. Click **View users with application**.
7. Search for users that are associated with BlackBerry devices that you installed the BlackBerry Java® Application on.

---

### View how the BlackBerry Administration Service resolved software configuration conflicts for a user account

You can assign multiple software configurations to a user account or group. The BlackBerry® Administration Service uses specific rules to resolve conflicting settings in the multiple software configurations that you assign to a user account or group. After the BlackBerry Administration Service applies software configurations to a BlackBerry device, you can view how the BlackBerry Administration Service resolved any of the conflicting settings in the multiple software configurations.

**Before you begin:** Assign multiple software configurations to a user account or group.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. Click the name of a user account.
5. On the **Software configuration** tab, perform one of the following actions:
   - To view how the BlackBerry Administration Service resolved conflicts that involve BlackBerry Java® Applications, click **View resolved applications**.
   - To view how the BlackBerry Administration Service resolved conflicts that involve BlackBerry® Device Software, click **View Resolved BlackBerry Device Software bundles**.
• To view how the BlackBerry Administration Service resolved conflicts that involve application control policies for unlisted applications, click **View Resolved Application Control Policy for Unlisted Applications**.
• To view how the BlackBerry Administration Service resolved conflicts that involve the standard application settings in BlackBerry Device Software configurations, click **View Resolved BlackBerry Device Software application settings**.

6. View the appropriate information about how the BlackBerry Administration Service resolved the software configuration conflicts for the user account.

**Reconciliation rules for conflicting settings in software configurations**

If you assign multiple software configurations to user accounts or groups, the multiple software configurations might contain conflicting settings. For example, you might specify that a BlackBerry® Java® Application is required in a software configuration that you assign to a user account, but you might also specify that the same application is not permitted in a software configuration that you assign to a group that the user account belongs to. Conflicts can occur when you assign multiple BlackBerry Java Applications, application control policies, application control policies for unlisted applications, BlackBerry® Device Software, and the standard application settings in BlackBerry Device Software configurations.

The BlackBerry Administration Service uses predefined reconciliation rules to resolve conflicting settings in multiple software configurations, and to determine which applications, software, and settings the BlackBerry Administration Service installs on or applies to a BlackBerry device. The BlackBerry Administration Service resolves conflicting settings as an asynchronous background activity. You can view the outcome of the reconciliation activities, reconciliation errors, and the applications, software, and settings that the BlackBerry Administration Service installed on or applied to a BlackBerry device.

The BlackBerry Administration Service might have to reconcile software configuration settings that conflict if you perform any of the following actions:

• activate a user account
• assign a new BlackBerry device or PIN to a user
• assign a user account to or remove a user account from a group
• add a group to or remove a group from another group
• add an application to or remove an application from a software configuration
• change the settings for an application in a software configuration
• change the settings for an application control policy
• change the ranking for application control policies
• install a new version of the BlackBerry Device Software on a BlackBerry device
• add a BlackBerry Device Software configuration to or remove a BlackBerry Device Software configuration from a software configuration
• change a BlackBerry Device Software configuration
• change the standard application settings in a BlackBerry Device Software configuration

</tr>
<tr>
<td>A user account belongs to multiple groups. The calendar initial view setting is configured differently in each of the software configurations that are assigned to the groups.</td>
<td>The calendar initial view setting that is applied to the user’s BlackBerry® device is the lowest value that was specified in the multiple software configurations.</td>
</tr>
<tr>
<td>A user account belongs to multiple groups. The calendar keep appointments setting is configured differently in each of the software configurations that are assigned to the groups.</td>
<td>The calendar keep appointments setting that is applied to the user’s BlackBerry device is the highest value that was specified in the multiple software configurations.</td>
</tr>
<tr>
<td>A user account belongs to multiple groups. The email confirm delete setting is set to Yes in one or more of the software configurations that are assigned to the groups. The setting is set to No in the remaining software configurations.</td>
<td>If the email confirm delete setting is set to Yes in a software configuration that is assigned to a group that the user account belongs to, the Yes setting is applied to the BlackBerry device.</td>
</tr>
<tr>
<td>A user account belongs to multiple groups. The email hide sent messages setting is set to Yes in one or more of the software configurations that are assigned to the groups. The setting is set to No in the remaining software configurations.</td>
<td>If the email hide sent messages setting is set to No in a software configuration that is assigned to a group that the user account belongs to, the No setting is applied to the BlackBerry device.</td>
</tr>
<tr>
<td>A user account belongs to multiple groups. The email save copy in sent folder setting is set to Yes in one or more of the software configurations that are assigned to the groups. The setting is set to No in the remaining software configurations.</td>
<td>If the email save copy in sent folder setting is set to Yes in a software configuration that is assigned to a group that the user account belongs to, the Yes setting is applied to the BlackBerry device.</td>
</tr>
<tr>
<td>A user account belongs to multiple groups. The address book sort by setting is configured differently in each of the software configurations that are assigned to the groups.</td>
<td>If the address book sort by setting is configured differently in the software configurations that are assigned to the groups that the user account belongs to, the first name setting takes precedence over the last name setting, and the last name setting takes precedence over the company name setting.</td>
</tr>
<tr>
<td>A user account belongs to multiple groups. The attributes settings for the various standard application settings are configured differently in the software configurations that are assigned to the groups.</td>
<td>The Locked and visible setting takes precedence over the Unlocked and visible setting. The Unlocked and visible setting takes precedence over the Unlocked and hidden setting.</td>
</tr>
</tbody>
</table>
### Reconciliation rules: Application control policies

<table>
<thead>
<tr>
<th>Scenario</th>
<th>Rule</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard application settings are configured in a software configuration and assigned to user accounts with BlackBerry devices that are running a BlackBerry® Device Software version earlier than 5.0.</td>
<td>Standard application settings apply only to BlackBerry devices that are associated with BlackBerry® Enterprise Server Express version 5.0 or later, and BlackBerry devices that are running BlackBerry Device Software version 5.0 or later.</td>
</tr>
</tbody>
</table>

### Reconciliation rules: Application control policies for unlisted applications

<table>
<thead>
<tr>
<th>Scenario</th>
<th>Rule</th>
</tr>
</thead>
<tbody>
<tr>
<td>A user is assigned multiple software configurations that each contain the same application. A different application control policy is assigned to the application in each software configuration.</td>
<td>An application control policy for an application in a software configuration that is assigned to a user account takes precedence over an application control policy for the same application in a software configuration that is assigned to a group. The required setting takes precedence over the optional setting. The optional setting takes precedence over the disallowed setting. If multiple software configurations contain the same application, and each software configuration is assigned a different custom application control policy with the same disposition (for example, two custom required application control policies), the application control policy that you ranked highest in the BlackBerry® Administration Service is applied to the user's BlackBerry device.</td>
</tr>
</tbody>
</table>
### Reconciliation rules for conflicting settings in software configurations

<table>
<thead>
<tr>
<th>Scenario</th>
<th>Rule</th>
</tr>
</thead>
<tbody>
<tr>
<td>A software configuration that defines unlisted applications as disallowed is assigned to a user account. A software configuration that defines unlisted applications as optional is also assigned to the user account.</td>
<td>If unlisted applications are defined as disallowed in a software configuration that is assigned to a user account, unlisted applications are not permitted on the BlackBerry® device.</td>
</tr>
<tr>
<td>Multiple software configurations with different access control policies for unlisted applications are assigned to a user account.</td>
<td>The application control policy for unlisted applications that you ranked highest in the BlackBerry Administration Service is applied to the BlackBerry device.</td>
</tr>
</tbody>
</table>
Alternative methods for installing BlackBerry Java Applications on BlackBerry devices

Installing BlackBerry Java Applications on BlackBerry devices without using the BlackBerry Administration Service

You can install and update BlackBerry® Java® Applications on BlackBerry devices without using the BlackBerry Administration Service. You can use any of the following tools or software to install, update, and manage BlackBerry Java Applications on BlackBerry devices:

- BlackBerry® Desktop Software
- BlackBerry® Web Desktop Manager
- BlackBerry Application Web Loader on a web server
- standalone application loader tool
- web browser on BlackBerry devices

Developing BlackBerry Java Applications for BlackBerry devices

Application developers can use the BlackBerry® Java® Development Environment or the BlackBerry® Java® Plug-in for Eclipse® to create and test BlackBerry Java Applications for BlackBerry devices, and to package BlackBerry Java Applications to install them on BlackBerry devices using a user’s computer or over the wireless network. Application developers can use the BlackBerry JDE or the BlackBerry Java Plug-in for Eclipse to generate .cod files that contain the compiled application code for a BlackBerry Java Application. BlackBerry devices execute .cod files to run BlackBerry Java Applications. The BlackBerry JDE and the BlackBerry Java Plug-in for Eclipse also include tools to generate .jad files or .alx descriptor files that provide information about a BlackBerry Java Application that is used when the application is compiled.

MIDlets are Java applications that conform to the MIDP standard and can run on any mobile device that runs Java applications. Most MIDlets are distributed as .jar files. The BlackBerry JDE and the BlackBerry Java Plug-in for Eclipse include tools that you can use to convert existing MIDlets that are in .jad and .jar file formats to .cod file formats for use on BlackBerry devices.

For more information about developing and customizing BlackBerry Java Applications, visit www.blackberry.com/developers.

Methods you can use to install BlackBerry Java Applications on BlackBerry devices

If you do not want to use the BlackBerry® Administration Service to install or update BlackBerry Java® Applications on BlackBerry devices over the wireless network, you can use any of the following methods:
### Method Description

<table>
<thead>
<tr>
<th>Method</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Install BlackBerry Java Applications using the BlackBerry® Desktop Software</td>
<td>You can install a BlackBerry Java Application on a BlackBerry device by instructing the user to use the application loader tool that is part of the BlackBerry Desktop Software. An automated application installer installs the application files on the user’s computer. The user uses the BlackBerry® Desktop Manager to navigate to the application files and install the BlackBerry Java Application on a BlackBerry device that the user connects to the computer.</td>
</tr>
<tr>
<td>Install BlackBerry Java Applications using the BlackBerry Application Web Loader</td>
<td>You can install a BlackBerry Java Application on a BlackBerry device by instructing the user to browse to a specific web server that you configured to use the BlackBerry Application Web Loader. The user must connect the BlackBerry device to the computer.</td>
</tr>
<tr>
<td>Install BlackBerry Java Applications using the standalone application loader tool</td>
<td>You can install a BlackBerry Java Application on a BlackBerry device by installing the standalone application loader tool in a shared network folder, and providing users with a link to run the tool. The user must connect the BlackBerry device to the computer. This method requires that you install the BlackBerry® Device Manager on the user’s computer but does not require a full installation of the BlackBerry Desktop Software.</td>
</tr>
<tr>
<td>Install BlackBerry Java Applications using a web browser on BlackBerry devices</td>
<td>You can install a BlackBerry Java Application on a BlackBerry device by installing the files for the BlackBerry Java Application on a web server and instructing the user to browse to the appropriate web address on the BlackBerry device. Users can download the BlackBerry Java Application from an Internet web site using a web browser or from an intranet web site using the BlackBerry® Browser. This method does not require the user to connect the BlackBerry device to the computer.</td>
</tr>
</tbody>
</table>

### Installing BlackBerry Java Applications using the BlackBerry Desktop Software

Application developers can use the BlackBerry® Java® Development Environment or the BlackBerry® Java® Plug-in for Eclipse® to create an automated application installer. You can use the application installer to install the files for a BlackBerry Java Application (the .alx identifier file and the application's .cod files) on users’ computers. You can then instruct users to use the application loader tool in the BlackBerry® Desktop Software to install the BlackBerry Java Application on their BlackBerry devices. Users must connect their BlackBerry devices to their computers.

This method has the following advantages:

- You can control how the application files are distributed to users’ computers.
- Users are responsible for completing the installation.
If you installed the BlackBerry® Desktop Software on users’ computers, they can use it to install the BlackBerry Java Applications.

This method has the following disadvantages:

- You must install the BlackBerry Desktop Software on users’ computers.
- The users must use the BlackBerry Desktop Software to install the BlackBerry Java Application.
- You cannot control when the users install the BlackBerry Java Application.
- Users must connect their BlackBerry devices to their computers.

**Prerequisites: Installing BlackBerry Java Applications using the BlackBerry Desktop Software**

**BlackBerry® device**
- BlackBerry APIs and Java® ME (standard on BlackBerry devices)

**User’s computer**
- Windows® 2000 or later, Windows® XP, or Windows Vista®
- BlackBerry® Desktop Software version 4.0 or later
- Research In Motion® USB drivers and a USB connection for the BlackBerry device

**BlackBerry Java Application**
- .alx files and .cod files: The .alx file is the application descriptor that provides information about the application and the location of the application’s .cod files. A .cod file contains compiled and packaged application code. The application loader tool requires these files so that it can install the BlackBerry Java Application on BlackBerry devices.
- required modules: Some BlackBerry Java Applications require modules that are part of the BlackBerry® Device Software. The required modules are listed in the .alx file in a <requires> tag. If the required modules do not exist on the BlackBerry device, you need to install the necessary BlackBerry Device Software on the BlackBerry device. For more information about application dependencies, visit www.blackberry.com/developers to read the BlackBerry Java Development Environment Development Guide.

**Make the BlackBerry Java Application available to the BlackBerry Desktop Software**

1. Obtain the application installer (.exe file) for the BlackBerry® Java® Application from the application developer, vendor, or wireless service provider.
2. Run the application installer on the user's computer to install the .alx identifier file and .cod file in an installation folder on the user’s computer. You can also run the application installer to install the .alx identifier file and .cod file in a shared network folder that users can access from their computers.
Install the BlackBerry Java Application using the BlackBerry Desktop Software

For instructions for how to install a BlackBerry® Java® Application using the BlackBerry Desktop Software, visit www.blackberry.com/go/docs to find the required version of the BlackBerry Desktop Software User Guide.

Installing BlackBerry Java Applications using the BlackBerry Application Web Loader

You can configure the BlackBerry® Application Web Loader, which uses Microsoft® ActiveX®, to install a BlackBerry Java® Application on BlackBerry devices using a web server and Microsoft® Internet Explorer® on users’ computers. You can add the BlackBerry Application Web Loader to a web server (for example, on your organization’s intranet or a public web server), and instruct users to browse to the appropriate web address using Microsoft Internet Explorer. The BlackBerry Application Web Loader prompts users to install the BlackBerry Java Application, and installs the required .cod files for the application on BlackBerry devices. The users must connect their BlackBerry devices to their computers.

The BlackBerry Application Web Loader supports .cod files only. To install a MIDlet, convert the .jar file to a .cod file. For more information about how to compile .java and .jar file formats into the .cod file format, visit www.blackberry.com/developers to read the BlackBerry Java Development Environment Development Guide. For more information about the BlackBerry Application Web Loader and a sample development template, visit www.blackberry.com/go/docs to read the BlackBerry Application Web Loader Developer Guide.

This method has the following advantages:

• You do not have to install the BlackBerry® Desktop Software on users’ computers.
• The installation process is straightforward and requires Microsoft Internet Explorer, a common web browser.
• Users are responsible for completing the installation.

This method has the following disadvantages:

• You cannot control when the users install the BlackBerry Java Application.
• Users must connect their BlackBerry devices to their computers.

Prerequisites: Installing BlackBerry Java Applications using the BlackBerry Application Web Loader

BlackBerry device

• BlackBerry® APIs and Java® ME (standard on BlackBerry devices)

User’s computer

• Windows® 2000 or later, Windows® XP, or Windows Vista®
• Microsoft® Internet Explorer® version 5.0 or later
• Microsoft® ActiveX® version 8.0 or later
• BlackBerry Application Web Loader; if the BlackBerry Application Web Loader is not installed, the user is prompted to install it after the user browses to the specified web address
• Research In Motion® USB drivers and a USB connection for the BlackBerry device

Web server

Configure the following MIME types on the web server to permit users to download and install BlackBerry Java Applications on BlackBerry devices:

• .cod files: application/vnd.rim.cod
• .jad files: text/vnd.sun.j2me.app-descriptor
• scripting language: Use a scripting language that is supported by Microsoft Internet Explorer and Microsoft ActiveX.
• AxLoader.cab file: Copy the AxLoader.cab file to the folder that the web page .html files are located in (or update the <object> element URL information in the .html file to the new location).

BlackBerry Java Application

• .jad files and .cod files: The .jad file is the application descriptor that provides information about the application and the location of .cod files. A .cod file contains compiled and packaged application code. The BlackBerry Application Web Loader requires these files to install the BlackBerry Java Application.
• The maximum .jad file size is 4096 bytes.
• The maximum number of .cod files supported by the BlackBerry Application Web Loader is 32.
• MIDlet support: The BlackBerry Application Web Loader supports CLDC applications that reference the BlackBerry API or MIDlets that have been converted to the .cod file format.

Enable the BlackBerry Application Web Loader on a web server

Before you begin:
• Obtain the .jad and .cod files for the BlackBerry® Java® Application from the application developer, vendor, or wireless service provider.
• Visit www.blackberry.com/developers to download the latest version of the BlackBerry Application Web Loader (AxLoader.cab).

1. Create a web page that you can use to install the BlackBerry Java Application on BlackBerry devices.
2. Copy the AxLoader.cab file to the folder where the web page’s .html files are located.
3. Copy the .jad and .cod files for the application on the web server that hosts the web page.
4. Reference a specific version of the BlackBerry Application Web Loader.
   For more information about referencing a specific version of the BlackBerry Application Web Loader, visit www.blackberry.com/go/docs to read the BlackBerry Application Web Loader Developer Guide.
5. Associate the BlackBerry Application Web Loader with the .jad file.
6. To load the .jad file, invoke loadJad(). Use a string parameter that represents one of the following:
   • If the .jad file is in the same location as the AxLoader.cab file, use the .jad file name.
If the .jad file is in a different location than the AxLoader.cab file, use the relative location address of the .jad file.

7. Send the web address to users.

The BlackBerry Application Web Loader requires the BlackBerry device password before it can install a BlackBerry Java Application. If a password is set, the AxLoaderPassword control is used to obtain the password. This control is included in the AxLoader.cab file. For more information about obtaining a BlackBerry device password, visit www.blackberry.com/go/docs to read the BlackBerry Application Web Loader Developer Guide.

Install the BlackBerry Java Application using the BlackBerry Application Web Loader

Send these instructions to users.
1. Connect the BlackBerry® device to your computer.
2. Using Microsoft® Internet Explorer® version 5.0 or later, browse to <web_address>.
3. If the required version of the BlackBerry Application Web Loader is not installed on your computer, accept the installation prompt, and complete the instructions on the screen.
4. Complete the instructions on the screen to install the BlackBerry Java Application.

Installing BlackBerry Java Applications using the standalone application loader tool

The standalone application loader tool is included in the BlackBerry® Enterprise Server Express installation files. You can make the standalone application loader tool available from a shared network folder and provide users with a link to run the tool and install the BlackBerry Java® on their BlackBerry devices. The users must connect their BlackBerry devices to their computers to install the BlackBerry Java Application.

You must install the BlackBerry® Device Manager on users’ computers so that users can use this method to install BlackBerry Java Applications. The BlackBerry Device Manager manages the connection between the standalone application loader tool and the BlackBerry device. The BlackBerry Device Manager is included in the BlackBerry® Desktop Software. You can also install the BlackBerry Device Manager on users’ computers without installing the full BlackBerry Desktop Software. To download the BlackBerry Device Manager or the BlackBerry Desktop Software, visit na.blackberry.com/eng/support/downloads/.

You can also use the standalone application loader tool to install BlackBerry Java Applications in automated mode on BlackBerry devices. Automated mode installs the BlackBerry Java Application on BlackBerry devices without giving users the option to cancel the installation.

Advantages of this method include:

• The installation process is straightforward.
• Users are responsible for completing the installation.

Disadvantages of this method include:
• You cannot control when users install the BlackBerry Java Application.
• Users must connect the BlackBerry device to their computers.
• You must install the BlackBerry Desktop Software on users’ computers.

Prerequisites: Installing BlackBerry Java Applications using the standalone application loader tool

BlackBerry device
• BlackBerry® APIs and Java® ME (standard on BlackBerry devices)

User’s computer
• Windows® 2000 or later, Windows® XP, or Windows Vista®
• BlackBerry® Desktop Software version 4.0 or later
• BlackBerry® Device Manager version 4.1 (for automated mode)
• Research In Motion USB drivers and USB connection

BlackBerry Java Application
• .alx file and .cod files: The .alx file is the application descriptor that provides information about the application and the location of the application’s .cod files. A .cod file contains compiled and packaged application code. The standalone application loader tool requires these files to install the BlackBerry Java Application.
• required modules: Some BlackBerry Java Applications require modules that are part of the BlackBerry® Device Software. The required modules are listed in the .alx file in a <requires> tag. If the required modules do not exist on the BlackBerry device, you must install the required BlackBerry Device Software on the BlackBerry device. For more information about application dependencies, visit www.blackberry.com/developers to read the BlackBerry Java Development Environment Development Guide.
• required BlackBerry Java Applications: To configure a BlackBerry Java Application as required on a BlackBerry device, in the .alx file, after the copyright statement, add the following tag: <required>true</required>.

Add BlackBerry Java Application files to a shared network folder

Before you begin:
• The standalone application loader tool is installed when you install the BlackBerry® Enterprise Server Express. Verify that the standalone application loader tool is installed in <drive>:\Program Files\Common Files\Research In Motion\AppLoader.
• Obtain the .alx and .cod files for the BlackBerry® Java® Application from the application developer, vendor, or wireless service provider.

1. In <drive>:\Program Files\Common Files\Research In Motion\Shared\Applications\, create a folder with a unique name to contain the application files. Maintain the application’s file structure.
2. Copy the .cod, .alx, and .dll files for the BlackBerry Java Application to the folder that you created.
Share the Research In Motion folder that contains the BlackBerry Java Application

1. Navigate to `<drive>:\Program Files\Common Files\Research In Motion`.
2. Right-click the Research In Motion folder. Click Properties.
3. On the Sharing tab, click Share this folder. Provide read-only permissions.
4. If necessary, configure other required options.
5. Click OK.

After you finish: Select a distribution method (for example, an email message or an intranet web page) that you can use to provide users with a link to the loader.exe file (for example, `\<shared_computer_name>\Research In Motion\Apploader\loader.exe`.

Configure the standalone application loader tool to install the BlackBerry Java Application in automated mode

Use automated mode if you do not want to give users the option to cancel the installation of the BlackBerry® Java® Application.

Before you begin: Verify that BlackBerry® Device Manager version 4.1 or later is installed on the user’s computer.

When you distribute the link to the shared network folder to users, specify the loading command using the following format:
• USB: `\<shared_computer_name>\Research In Motion\Apploader\loader.exe /defaultUSB /forceload`

Install the BlackBerry Java Application using the standalone application loader tool

Send these instructions to users.

Before you begin: Verify that the BlackBerry® Desktop Software is installed on your computer. If it is not, contact your administrator.

1. Connect the BlackBerry device to your computer.
2. If prompted, type your BlackBerry device password.
3. Click Next.
4. On your computer, click the link to the loader.exe file that your administrator provided you with.
5. If a security warning displays, click Run.
6. Complete the instructions on the screen.
7. When the installation process completes, click Close.
Installing BlackBerry Java Applications using a web browser on BlackBerry devices

You can install BlackBerry® Java® Applications on BlackBerry devices over the wireless network. This method does not require users to connect their BlackBerry devices to their computers.

You can add the required files for the BlackBerry Java Application (a .jad file and the application .cod or .jar files) to a web server, and instruct users to navigate to the appropriate web address using a browser on their BlackBerry devices. Users can use the BlackBerry® Browser or the wireless service provider’s WAP Browser. When users access the web address, they can click a download option to install the BlackBerry Java Application on their BlackBerry devices.

This method has the following advantages:

- You do not have to install the BlackBerry® Desktop Software on users’ computers.
- Users do not have to connect their BlackBerry devices to their computers.
- Users are responsible for completing the installation.

This method has the following disadvantages:

- You cannot control when users install the BlackBerry Java Application.
- Installing a BlackBerry Java Application on BlackBerry devices over the wireless network can result in increased network usage.

Prerequisites: Installing BlackBerry Java Applications using a web browser on BlackBerry devices

BlackBerry device

- BlackBerry® APIs and Java® ME (standard on BlackBerry devices)

Web server

Configure the following MIME types on the web server to permit users to download and install BlackBerry Java Applications on BlackBerry devices:

- .cod files: application/vnd.rim.cod
- .jad files: text/vnd.sun.j2me.app-descriptor
- .jar files (optional): application/java-archive

BlackBerry Java Application

- .jad file: The .jad file is the application descriptor that provides information about the application and the location of the application’s .cod or .jar files.
- .cod or .jar files: These files contain compiled and packaged application code.
Install the BlackBerry Java Application on a web server

**Before you begin:** Obtain the .jad and .cod files or .jar files for the BlackBerry® Java® Application from the application developer, vendor, or wireless service provider.

1. Create a web page that you can use to install the BlackBerry Java Application on BlackBerry devices.
2. Copy the application .jad and .cod files or .jar files to the web server that hosts the web page.

**After you finish:** Select a distribution method (for example, an email message or an intranet web page) that you can use to provide users with the web address for the web page that you created.

Install the BlackBerry Java Application using a web browser on the BlackBerry device

Send these instructions to users.

1. Open a web browser on the BlackBerry® device.
2. Navigate to the web address that your administrator provided you with.
3. Click **Download**.
Configuring how users access enterprise applications and web content

Specifying a BlackBerry MDS Connection Service as a central push server

At least one BlackBerry® MDS Connection Service in your organization's BlackBerry Domain must act as a central push server. Central push servers receive content push requests from server-side applications that are located on an application server or on a web server. Central push servers also manage push requests and send application data and application updates to BlackBerry device applications.

If a BlackBerry Domain includes one BlackBerry MDS Connection Service that is version 5.0 or later, by default, that BlackBerry MDS Connection Service is the central push server. If two BlackBerry MDS Connection Service instances (that are version 5.0 or later) exist in a BlackBerry Domain, by default, both instances are central push servers. If more than two BlackBerry MDS Connection Service instances (that are version 5.0 or later) exist in a BlackBerry Domain, the first two instances that start are central push servers. You can configure any BlackBerry MDS Connection Service in your organization's BlackBerry Domain to act as a central push server. If a BlackBerry MDS Connection Service in your organization's environment is earlier than version 5.0, it is not designated as a central push server automatically when it starts.

Related topics
Configure multiple BlackBerry Enterprise Server Express instances to use the same BlackBerry MDS Connection Service, 57

Specify a BlackBerry MDS Connection Service as a central push server

You can specify more than one BlackBerry® MDS Connection Service in your organization's BlackBerry Domain as a central push server. By default, if one or two BlackBerry MDS Connection Service instances exist in the BlackBerry Domain, those instances are central push servers.

1. In the BlackBerry Administration Service, in the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service.
2. Click the instance that you want to change.
3. Click Edit instance.
4. In the General section, in the Is centralized push server drop-down list, click Yes.
5. Click Save all.

After you finish:
- Notify the push application developers in your organization's environment that you have specified a new central push server.
Configuring how BlackBerry devices authenticate to content servers

If you configured the content servers in your organization's environment to use an authentication protocol to authenticate the sources of the data requests that they receive, you can control how BlackBerry® devices authenticate to content servers to receive application data and application updates.

**Configure how BlackBerry devices authenticate to content servers**

You can configure whether BlackBerry® devices authenticate to content servers directly, or whether the BlackBerry MDS Connection Service authenticates to content servers on behalf of BlackBerry devices. If you configure BlackBerry devices to authenticate directly to content servers but you do not configure an authentication method for BlackBerry MDS Connection Service connections, authenticated BlackBerry devices prompt users to provide login information every 60 minutes. The BlackBerry devices prompt users only if the connection to the content server persists for more than 60 minutes.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view**.
2. Click **MDS Connection Service**.
3. Click **Edit component**.
4. On the **HTTP** tab, in the **Protocol service information** section, in the **Authentication support enabled** drop-down list, perform one of the following actions:
   - If you want BlackBerry devices to authenticate to content servers directly, click **No**.
   - If you want the BlackBerry MDS Connection Service to store authentication information and perform HTTP authentication on behalf of BlackBerry devices, click **Yes**.
5. If necessary, in the **Authentication timeout** field, type the length of time, in milliseconds, that you want authentication information for BlackBerry devices to remain valid on the content server. By default, the authentication timeout limit is 1 hour.
6. Click **Save all**.

**After you finish:** If you set **Authentication support enabled** to **Yes**, configure the BlackBerry MDS Connection Service to authenticate to content servers that use NTLM, Kerberos™, LTPA, or RSA® Authentication Manager on behalf of BlackBerry devices.

**Related topics**

Managing how users access enterprise applications and web content, 215

Configure the BlackBerry MDS Connection Service to authenticate BlackBerry devices to content servers that use NTLM

**Before you begin:** Configure the BlackBerry® MDS Connection Service to authenticate to content servers on behalf of BlackBerry devices.
1. Navigate to <drive>:\Program Files\Research In Motion\BlackBerry Enterprise Server\MDS\Servers\Instance\config.
2. Configure the MdsLogin.conf file.

**Configure the BlackBerry MDS Connection Service to authenticate BlackBerry devices to content servers that use Kerberos**

**Before you begin:** Configure the BlackBerry® MDS Connection Service to authenticate to content servers on behalf of BlackBerry devices.

1. Navigate to <drive>:\Program Files\Research In Motion\BlackBerry Enterprise Server\MDS\Servers\Instance\config.
2. Configure the krb5.conf file.

For more information about the Kerberos™ 5 configuration file, visit web.mit.edu/kerberos/www/krb5-1.3/krb5-1.3.3/doc/krb5-admin.html#krb5.conf.

**Configure the BlackBerry MDS Connection Service to authenticate BlackBerry devices to content servers that use LTPA**

BlackBerry® devices that are running BlackBerry® Device Software version 3.8 or later manage how HTTP cookies are stored and used to authenticate to content servers that use LTPA authentication technology. For BlackBerry devices that use previous versions of the BlackBerry Device Software, you must permit the BlackBerry MDS Connection Service to manage HTTP cookie storage on BlackBerry devices.

**Before you begin:** Configure the BlackBerry MDS Connection Service to authenticate to the content servers in your organization’s environment on behalf of BlackBerry devices.

1. In the BlackBerry Administration Service, in the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view**.
2. Click **MDS Connection Service**.
3. Click **Edit component**.
4. On the **HTTP** tab, in the **Protocol service information** section, in the **Cookie support enabled** drop-down list, click **Yes**.
5. Click **Save all**.
Configuring the BlackBerry MDS Connection Service to authenticate devices to the RSA Authentication Manager

You can configure the BlackBerry® MDS Connection Service to require that BlackBerry device users pass RSA® authentication when they access the Internet or intranet from BlackBerry devices. You can configure the BlackBerry MDS Connection Service to require that users use RSA authentication in one of the following scenarios:

- when users access every web site and intranet site from devices
- when users access intranet sites from devices
- when users access web addresses or intranet addresses that you specify

If you configure the BlackBerry MDS Connection Service to require that users use RSA authentication to access web addresses or intranet addresses that you specify, you can choose to apply this option to specific user accounts or to all user accounts that are associated with a BlackBerry® Enterprise Server Express instance.

After the RSA Authentication Manager authenticates the devices, if you configured proxy authentication, the devices prompt users to authenticate to the proxy server.

Prerequisites: Configuring the BlackBerry MDS Connection Service to support RSA authentication when the BlackBerry MDS Connection Service runs on Windows Server 2008

- If required, remove the RSA® Authentication Agent from the computer that hosts the BlackBerry® MDS Connection Service.
- If required, in the RSA® Authentication Manager, delete the node secret data for the computer that hosts the BlackBerry MDS Connection Service.
- If required, delete the node secret data that is located on the computer that hosts the BlackBerry MDS Connection Service.
- Retrieve the RSA Authentication API version 5.0.3.2 from RSA.

Configure the BlackBerry MDS Connection Service to support RSA authentication when the BlackBerry MDS Connection Service runs on Windows Server 2008

1. On the computer that hosts the BlackBerry® MDS Connection Service, copy the aceclnt.dll and sdmsg.dll file from the RSA® Authentication API to one of the following folders:
   - If you are running a 32-bit version of Windows Server® 2008, the <drive>:\WINDOWS\system32 folder
   - If you are running a 64-bit version of Windows Server 2008, the <drive>:\WINDOWS\SysWow64 folder

2. In the RSA® Authentication Manager, create an Agent Host record for the BlackBerry® Enterprise Server Express. The RSA Authentication Manager generates an sdconf.rec file.

3. On the computer that hosts the BlackBerry MDS Connection Service, copy the sdconf.rec file that the RSA Authentication Manager generates to one of the following folders:
   - If you are running a 32-bit version of Windows Server 2008, the <drive>:\WINDOWS\system32 folder
   - If you are running a 64-bit version of Windows Server 2008, the <drive>:\WINDOWS\SysWow64 folder

4. In the Windows® Services, restart the BlackBerry MDS Connection Service.
Configure the BlackBerry MDS Connection Service to authenticate devices to the RSA Authentication Manager

Before you begin:
- Configure the BlackBerry® MDS Connection Service to authenticate to the content servers in your organization's environment on behalf of BlackBerry devices.
- To specify the web addresses that require RSA® authentication, configure URL patterns and access control rules that restrict user access to specific web addresses or intranet addresses.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. Click MDS Connection Service.
3. Click Edit component.
4. On the RSA tab, in the Protocol service information section, in the RSA® authentication support drop-down list, select one of the following options:
   - If you want users to use RSA authentication when they access every web address or intranet address, select Turn on globally.
   - If you want users to use RSA authentication when they access the intranet only, select Turn on for Intranet only.
   - If you want users to use RSA authentication for web addresses or intranet addresses that you specify, select Turn on for specific sites only.
5. In the RSA authentication timeout field, type a number, in minutes, to specify how long devices that the RSA Authentication Manager authenticates can remain connected to your organization's network while the users are active.
   By default, the authenticated connection persists for 24 hours.
6. In the RSA inactivity timeout field, type a number, in minutes, to specify how long devices can remain connected to your organization's network while the users are inactive.
   By default, an authenticated connection persists for 60 minutes of user inactivity on the devices.
7. Click Save all.

Restarting BlackBerry Enterprise Server Express components, 277
Managing how users access enterprise applications and web content, 215

Configuring how the BlackBerry MDS Connection Service manages requests for web content

The BlackBerry® MDS Connection Service manages requests for web content from the BlackBerry® Browser and other applications on BlackBerry devices. You can configure how the BlackBerry MDS Connection Service manages these requests.
Configure the BlackBerry MDS Connection Service to manage HTTP cookie storage

By default, the BlackBerry® MDS Connection Service does not manage HTTP cookie storage for BlackBerry devices. If the BlackBerry device requires JavaScript® support for its HTTP requests, the BlackBerry device processes cookies.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. Click MDS Connection Service.
3. Click Edit component.
4. On the HTTP tab, in the Protocol service information section, in the Cookie support enabled drop down list, click Yes.
5. Click Save all.

After you finish: To prevent the BlackBerry MDS Connection Service from managing HTTP cookie storage, change the Cookie support enabled drop-down list to No.

Configure the timeout limit for HTTP connections with BlackBerry devices

You can specify how long a BlackBerry® MDS Connection Service waits for a BlackBerry device to send data to it before the BlackBerry MDS Connection Service closes the HTTP connection to the BlackBerry device. The default timeout limit is 120,000 milliseconds (2 minutes).

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. Click MDS Connection Service.
3. Click Edit component.
4. On the HTTP tab, in the Protocol service information section, in the Device connection timeout field, type a number in milliseconds.
5. Click Save all.

Configure the timeout limit for HTTP connections with web servers

You can specify how long a BlackBerry® MDS Connection Service waits for a web server to send data to it before the BlackBerry MDS Connection Service closes the HTTP connection to the web server. The default timeout limit is 120,000 milliseconds (2 minutes).

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. Click MDS Connection Service.
3. Click Edit component.
4. On the HTTP tab, in the Protocol service information section, in the Server connection timeout field, type a number in milliseconds.
5. Click **Save all**.

**Configure the maximum number of times that the BlackBerry Browser accepts HTTP redirections**

HTTP redirection occurs when the BlackBerry® Browser requests a web page from a web server and the web server redirects the request to a new web address for the page. The default limit is 5 redirections.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view**.
2. Click **MDS Connection Service**.
3. Click **Edit component**.
4. On the **HTTP** tab, in the **Protocol service information** section, in the **Maximum redirect connections** field, type a number.
5. Click **Save all**.

**Permitting push applications to make trusted connections to a BlackBerry MDS Connection Service**

To permit push applications to open trusted connections to a BlackBerry® MDS Connection Service, you must create a key store (the webserver.keystore file) on the computer that hosts the BlackBerry MDS Connection Service. This key store permits the BlackBerry MDS Connection Service to accept HTTPS connections from push applications.

Push applications can use a BlackBerry MDS Connection Service certificate to open HTTPS connections to the BlackBerry MDS Connection Service to push application data and application updates to the BlackBerry devices that are assigned to that BlackBerry MDS Connection Service.

You can use the Java® keytool to create a self-signed certificate for the BlackBerry MDS Connection Service, or you can import a signed certificate from a trusted public certification authority. You can use the Java keytool to export the BlackBerry MDS Connection Service certificate from the key store, and import the certificate to the key stores that the Java push applications use.

For more information about using the Java keytool, visit [java.sun.com/javase/6/docs/technotes/tools/windows/keytool.html](http://java.sun.com/javase/6/docs/technotes/tools/windows/keytool.html). For more information about the Apache Tomcat™ requirements, visit [tomcat.apache.org/tomcat-5.5-doc/ssl-howto.html](http://tomcat.apache.org/tomcat-5.5-doc/ssl-howto.html).

**Create a key store to store certificates for use with HTTPS connections**

You must create a key store to store the certificates that permit the BlackBerry® MDS Connection Service to accept HTTPS connections from push applications.

1. On the computer that hosts the BlackBerry MDS Connection Service, on the taskbar, click **Start > Programs > BlackBerry Enterprise Server > BlackBerry Server Configuration**.
2. On the **Mobile Data Service** tab, configure the key store information. Only one key store can exist. The file must be named webserver.keystore and it must be located at `<drive>:\Program Files\Research In Motion\BlackBerry Enterprise Server\MDS\webserver`.

3. Click **Create Keystore File**.
4. If prompted to overwrite a key store, click **Yes**.
5. Click **OK**.

### Add a certificate for the BlackBerry MDS Connection Service

To permit server-side push applications to open trusted HTTPS connections to a BlackBerry® MDS Connection Service and push application data and application updates to BlackBerry devices, you must add a certificate for the BlackBerry MDS Connection Service to the webserver.keystore file.

1. On the computer that hosts the BlackBerry MDS Connection Service, navigate to `<drive>:\Program Files\Java \<JRE_version>\bin`.
2. At the command prompt, perform one of the following tasks:

<table>
<thead>
<tr>
<th>Task</th>
<th>Steps</th>
</tr>
</thead>
<tbody>
<tr>
<td>Create a self-signed certificate for the BlackBerry MDS Connection Service and add it to the key store.</td>
<td>a. Type <code>keytool -genkey -alias tomcat -keyalg RSA -keystore webserver.keystore</code>.&lt;br&gt;b. Type the required information.&lt;br&gt;c. To confirm the information that you typed, type <strong>Yes</strong>.</td>
</tr>
<tr>
<td>Add a publicly signed certificate to the key store.</td>
<td>a. Type <code>keytool -import -trustcacerts -alias tomcat -file &lt;trustedserver.cer&gt; -keystore webserver.keystore</code>.&lt;br&gt;b. Type the key store password.&lt;br&gt;c. When prompted, click <strong>Yes</strong>.</td>
</tr>
</tbody>
</table>

3. Copy the key store file to `<drive>:\Program Files\Research In Motion\BlackBerry Enterprise Server\MDS\webserver`.

**After you finish:** Export the certificate for the BlackBerry MDS Connection Service to make it available to other applications.

### Export the BlackBerry MDS Connection Service certificate to make it available to push applications

You must export the certificate for the BlackBerry® MDS Connection Service so that you can import it to the key store of a server-side push application.

**Before you begin:** Add a self-signed or publicly signed certificate for the BlackBerry MDS Connection Service to the key store.

1. On the computer that hosts the BlackBerry MDS Connection Service, navigate to `<drive>:\Program Files\Java \<JRE_version>\bin`.
2. At the command prompt, type `keytool -export -alias tomcat -file <server.cer> -keystore <drive>:\Program Files \Research In Motion\BlackBerry Enterprise Server\MDS\webserver\webserver.keystore -storepass <password>.

3. Type the key store password.

**After you finish:** Import the certificate for the BlackBerry MDS Connection Service to the key store of a push application.

---

**Import the BlackBerry MDS Connection Service certificate to the key store of a push application**

To permit a server-side push application to open trusted connections to the BlackBerry® MDS Connection Service, you must add the certificate for the BlackBerry MDS Connection Service to the key store of the push application.

1. On the computer that hosts the BlackBerry MDS Connection Service, navigate to `<drive>:\Program Files\Java \<JRE_version>\bin`.

2. At a command prompt, type `keytool -import -trustcacerts -alias <alias> -file <server.cer> -keystore <application_keystore>`.

3. Type the key store password.

4. To add the certificate to the key store, at the prompt, type `Yes`.

**After you finish:** If the certificate does not exist, import the certificate to `<drive>:\Program Files\Java\<JRE version>\lib\security\cacerts`.

---

**Configuring a BlackBerry MDS Connection Service to trust web servers**

You can configure the BlackBerry® MDS Connection Service to permit BlackBerry devices to pull application data and updates from trusted or untrusted web servers. If you want to open trusted connections between web servers and the BlackBerry MDS Connection Service, you must import the certificate for the web server into the JRE™ certificates keystore file (JRE cacerts).

The BlackBerry MDS Connection Service supports LDAP, OCSP, and CRL to retrieve certificates and certificate status, and HTTPS and SSL/TLS for connections that use trusted certificates.

---

**Specify whether the BlackBerry MDS Connection Service requires trusted HTTPS connections from web servers**

1. In the BlackBerry® Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view**.

2. Click **MDS Connection Service**.

3. Click **Edit component**.

4. On the **HTTPS** tab, in the **Name** field, type the name of a web server.
5. In the **Service URL** field, type the regular expression for the web address of the web server. For example, type * to represent all web servers, or type **https://<domain>.com*** to specify all web servers in a specific domain. For more information about regular expressions in Java®, visit java.sun.com/j2se/1.4.2/docs/api/java/util/regex/Pattern.html and java.sun.com/docs/books/tutorial/essential/regex/literals.html.

6. In the **Settings** section, in the **Allow untrusted servers** drop-down list, perform one of the following actions:
   - To permit only trusted HTTPS connections from the web server, click **No**.
   - To permit untrusted HTTPS connections from the web server, click **Yes**.

7. Click the **Add** icon.

8. Repeat steps 4 to 7 for each web server that you want to specify.

9. Click **Save all**.

**After you finish:** Restart the BlackBerry MDS Connection Service.

**Related topics**

Restarting BlackBerry Enterprise Server Express components, 277

### Specify whether the BlackBerry MDS Connection Service requires trusted TLS connections from web servers

1. In the BlackBerry® Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view**.

2. Click **MDS Connection Service**.

3. Click **Edit component**.

4. On the **TLS** tab, in the **Name** field, type the name of a web server.

5. In the **Service URL** field, type the regular expression for the web address of the web server.

6. In the **Settings** section, in the **Allow untrusted servers** drop-down list, perform one of the following actions:
   - To permit only trusted TLS connections from the web server, click **No**.
   - To permit untrusted TLS connections from the web server, click **Yes**.

7. Click the **Add** icon.

8. Repeat steps 4 to 7 for each web server that you want to specify.

9. Click **Save all**.

**After you finish:** Restart the BlackBerry MDS Connection Service.

**Related topics**

Configuring certificate server information for the BlackBerry MDS Connection Service

The certificate for the BlackBerry® MDS Connection Service permits push applications to make HTTPS connection to the BlackBerry MDS Connection Service. You can configure the BlackBerry MDS Connection Service to search for and retrieve certificates and the status of the certificates that external web servers use to make HTTPS connections.

To search for and retrieve certificates from an LDAP server, you can configure the BlackBerry MDS Connection Service to use LDAP or DSML. The BlackBerry MDS Connection Service searches each LDAP server using LDAP or DSML in the order that you specify. If you configure the BlackBerry MDS Connection Service to use both LDAP and DSML to search and retrieve certificates, the BlackBerry MDS Connection Service searches the servers using LDAP and then searches the servers using DSML. After the BlackBerry MDS Connection Service retrieves the certificate, the BlackBerry® Enterprise Server Express sends the certificate to the BlackBerry device, and the BlackBerry device displays the certificate so that the user can accept it. The BlackBerry MDS Connection Service supports DSML version 2.

To search for and retrieve the status of the certificates, you can configure the BlackBerry MDS Connection Service to search the OCSP servers or CRL servers. If you search for the status of the certificates using an OCSP server or a CRL server, which server you choose to search for the status of the certificates first does not matter because each server creates a prioritized list automatically.

For more information about certificates, see the *BlackBerry Enterprise Solution Security Technical Overview*.

Configure the LDAP servers that the BlackBerry MDS Connection Service uses to retrieve certificates

You can create a user name and password so that the BlackBerry® MDS Connection Service can authenticate to LDAP servers on behalf of BlackBerry devices.

If you change the LDAP port number or host server information, you must stop and restart the BlackBerry MDS Connection Service so that the BlackBerry MDS Connection Service can use the new port number or host server information immediately.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry solution topology > BlackBerry Domain > Component view.
2. Click MDS Connection Service.
3. On the LDAP tab, click Edit component.
4. In the LDAP Service Information section, perform one of the following tasks:

<table>
<thead>
<tr>
<th>Task</th>
<th>Steps</th>
</tr>
</thead>
</table>
| Create an LDAP server configuration. | a. Type the LDAP server name and the web address for the server.  
b. In the Settings section, configure the LDAP server settings.  
c. Click the Add icon. |
Change an existing LDAP server configuration.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Base Query</td>
<td>This field specifies the base query for the default LDAP server. You can use %20 for spaces. Each LDAP server can host multiple Windows® domains but can search in only one Windows domain at a time. You might need to configure a default base query for some LDAP servers.</td>
</tr>
<tr>
<td>Password and Confirm Password</td>
<td>These fields specify a password if the LDAP server requires simple authentication.</td>
</tr>
<tr>
<td>Query Limit</td>
<td>This field specifies the maximum number of entries that you want to return for each query.</td>
</tr>
<tr>
<td>Service URL</td>
<td>This field specifies the FQDN and port number of the LDAP server. You must use the &lt;FQDN&gt;:&lt;Port&gt; format.</td>
</tr>
<tr>
<td>User name</td>
<td>This field specifies the user name if the LDAP server requires simple authentication.</td>
</tr>
</tbody>
</table>

Configure the BlackBerry MDS Connection Service to use DSML to retrieve certificates

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry solution topology > BlackBerry Domain > Component view.
2. Click MDS Connection Service.
3. On the DSML tab, click Edit component.
4. In the Protocol Service Information section, in the Query limit field, type the maximum number of certificates that the BlackBerry MDS Connection Service can retrieve during each search it performs.
5. Perform one of the following tasks:
<table>
<thead>
<tr>
<th>Task</th>
<th>Steps</th>
</tr>
</thead>
<tbody>
<tr>
<td>Create a configuration for a DSML certificate server.</td>
<td>a. In the <strong>Name</strong> field, type a name for the DSML certificate server that you want the BlackBerry MDS Connection Service to search.</td>
</tr>
<tr>
<td></td>
<td>b. In the <strong>Service URL</strong> field, type the FQDN of the DSML certificate server (for example, <a href="http://server01.rim.com:1234/dsml/adsoap.dsmlx">http://server01.rim.com:1234/dsml/adsoap.dsmlx</a>).</td>
</tr>
<tr>
<td></td>
<td>c. In the <strong>Settings</strong> section, if you do not want the BlackBerry MDS Connection Service to search the entire directory tree, in the <strong>Default Server Base Query</strong> field, type the search base that the BlackBerry MDS Connection Service can use.</td>
</tr>
<tr>
<td></td>
<td>d. To permit the BlackBerry MDS Connection Service to authenticate with the DSML certificate server on behalf of BlackBerry devices, in the <strong>DSML User ID</strong> field, type the user name that the BlackBerry MDS Connection Service can use to authenticate with the DSML certificate server.</td>
</tr>
<tr>
<td></td>
<td>e. In the <strong>DSML Password</strong> and <strong>Confirm DSML Password</strong> fields, type the password for the user name that the BlackBerry MDS Connection Service can use to authenticate with the DSML certificate server.</td>
</tr>
<tr>
<td></td>
<td>f. Click the <strong>Add</strong> icon.</td>
</tr>
<tr>
<td>Change a configuration for an existing DSML certificate server configuration.</td>
<td>a. Click the <strong>Edit</strong> icon that is beside the DSML certificate server that you want to change.</td>
</tr>
<tr>
<td></td>
<td>b. In the <strong>Settings</strong> section, change the DSML certificate server settings.</td>
</tr>
<tr>
<td></td>
<td>c. Click the <strong>Accept</strong> icon.</td>
</tr>
</tbody>
</table>

6. Click **Save all**.

**After you finish:**

- To configure the BlackBerry MDS Connection Service to retrieve the status of certificates from an OCSP server or CRL server, you must configure the OCSP server and CRL server information.
- Add the communication information that you configured for the DSML server to the BlackBerry MDS Connection Service configuration set.

Configure the OCSP servers that the BlackBerry MDS Connection Service uses to retrieve the status of certificates

You can configure the BlackBerry® MDS Connection Service to authenticate to OCSP servers on behalf of BlackBerry devices and to retrieve the status of certificates.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry solution topology > BlackBerry Domain > Component view.
2. Click MDS Connection Service.
3. On the OCSP tab, click Edit component.
4. In the OCSP Service information section, perform the following actions:
   • Configure the BlackBerry MDS Connection Service to accept OCSP servers that BlackBerry devices specify.
   • Configure the OCSP handler to use the OCSP responder extension in a certificate.
5. Perform one of the following tasks:

<table>
<thead>
<tr>
<th>Task</th>
<th>Steps</th>
</tr>
</thead>
<tbody>
<tr>
<td>Create an OCSP server configuration.</td>
<td>a. Type the OCSP server name and the web address for the server.</td>
</tr>
<tr>
<td></td>
<td>b. Click the Add icon.</td>
</tr>
<tr>
<td>Change an existing OCSP server configuration.</td>
<td>a. Click the Edit icon beside the OCSP server.</td>
</tr>
<tr>
<td></td>
<td>b. Click the Accept icon.</td>
</tr>
</tbody>
</table>

6. Click Save all.

After you finish: Add the communication information that you configured for the OCSP server to the BlackBerry MDS Connection Service configuration set.

Restarting BlackBerry Enterprise Server Express components, 277

Configure the CRL servers that the BlackBerry MDS Connection Service uses to retrieve the status of certificates

You can configure the BlackBerry® MDS Connection Service to authenticate to CRL servers on behalf of BlackBerry devices and to retrieve the status of certificates.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry solution topology > BlackBerry Domain > Component view.
2. Click MDS Connection Service.
3. On the CRL tab, click Edit component.
4. In the CRL Service information section, perform the following actions:
   • Configure the BlackBerry MDS Connection Service to accept CRL servers that BlackBerry devices specify.
   • Configure the CRL handler to use the CRL responder extension in a certificate.
5. Perform one of the following tasks:

<table>
<thead>
<tr>
<th>Task</th>
<th>Steps</th>
</tr>
</thead>
<tbody>
<tr>
<td>Create a CRL server configuration.</td>
<td>a. Type the CRL server name and the web address for the server.</td>
</tr>
<tr>
<td></td>
<td>b. Click the Add icon.</td>
</tr>
<tr>
<td>Change an existing CRL server configuration.</td>
<td>a. Click the Edit icon beside the CRL server.</td>
</tr>
<tr>
<td></td>
<td>b. Click the Accept icon.</td>
</tr>
</tbody>
</table>

6. Click **Save all**.

**After you finish:** Add the communication information that you configured for the CRL server to the BlackBerry MDS Connection Service configuration set.

**Related topics**
- Add communication information to a BlackBerry MDS Connection Service configuration set, 248
- Assign a BlackBerry MDS Connection Service configuration set to a BlackBerry MDS Connection Service instance, 249
- Restarting BlackBerry Enterprise Server Express components, 277

**Add communication information to a BlackBerry MDS Connection Service configuration set**

A BlackBerry® MDS Connection Service configuration set is a set of service configurations that the BlackBerry MDS Connection Service instances in your organization can use to communicate with a remote file system, an LDAP server, a DSML server, a CRL server, an OCSP server, or a certification authority. You must add the communication information that the BlackBerry MDS Connection Service requires to communicate with servers to a configuration set so that a BlackBerry MDS Connection Service instance can communicate with the servers after you assign the configuration set to the instance.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view**.
2. Click **MDS Connection Service**.
3. Click **Edit component**.
4. On the **Configuration Sets** tab, perform one of the following actions:
   - To create a configuration set, in the **Configuration set name** section, type a name and description for the configuration set.
   - To change an existing configuration set, click the **Edit** icon.
5. In the **Priority Service group** drop-down list, click the name of the service that you want to configure the communication method for.
6. In the **Service (Name : Description)** drop-down list, click the name of the communication method that you want to configure.
7. Click the **Add** icon.
8. To specify the communication method that the BlackBerry MDS Connection Service should try to connect to the server with first, click the Up and Down arrows. The BlackBerry MDS Connection Service resolves conflicts by applying communication methods in the order that you specify. The order of that you specify for LDAP, DSML, or file communication applies to each communication method separately. The order permits the BlackBerry MDS Connection Service to resolve conflicts between domains if you created multiple communication methods for a specific URL.

9. Perform one of the following actions:
   • To add a new configuration set, click the Add icon.
   • To update an existing configuration set, click the Update icon.

10. Click Save all.

After you finish:
   • To confirm your changes, click the View icon.
   • Assign the configuration set to a BlackBerry MDS Connection Service.

Assign a BlackBerry MDS Connection Service configuration set to a BlackBerry MDS Connection Service instance

You can assign a BlackBerry® MDS Connection Service configuration set to a BlackBerry MDS Connection Service instance so that BlackBerry device users can access documents on remote file systems from devices, the BlackBerry MDS Connection Service can search for certificates and check for the status of the certificates from LDAP servers, DSML servers, CRL servers, or OCSP servers, and the BlackBerry MDS Connection Service can send certificate requests to a certificate authority.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. Click MDS Connection Service.
3. Click the instance that you want to change.
4. Click Edit instance.
5. On the Component Configuration Sets tab, in the Available component configuration sets section, in the Service configuration sets drop-down list, click the configuration set that you want to assign to the BlackBerry MDS Connection Service instance.
6. Click Save all.
7. To restart the BlackBerry MDS Connection Service instance, on the Instance information tab, in the Status list, click Restart instance.
8. To assign the BlackBerry MDS Connection Service configuration set to another BlackBerry MDS Connection Service instance, repeat steps 3 to 7.

Add a retrieved certificate for a web server to the key store

You can use the Java® keytool to add a certificate for a web server to the BlackBerry® MDS Connection Service key store. The certificate permits the BlackBerry MDS Connection Service to connect to the trusted web server.

1. Save the certificate from a secure web site to a .cer file.
2. On the computer that hosts the BlackBerry MDS Connection Service, copy the .cer file to `<drive>:\Program Files\Java\<JRE_version>\lib\security`.
3. At a command prompt, navigate to `<drive>:\Program Files\Java\<JRE_version>\bin`.
4. Type `keytool -import -trustcacerts -alias <alias_name> -file <cert_filename> -keystore cacerts`.
5. Type the key store password.
6. To add the certificate to the key store, at the command prompt, type `Yes`.

After you finish: For more information about using the Java keytool, visit java.sun.com/javase/6/docs/technotes/tools/windows/keytool.html.

Permitting users to access intranet sites on BlackBerry devices using global login information

To permit users to access intranet sites on BlackBerry® devices without having to specify their user names and passwords, you can configure a global user name and password. When users try to access an intranet site, the BlackBerry MDS Connection Service checks to see if you configured global login information, and validates the login information. If authentication succeeds, users can access intranet sites without providing their user names and passwords. If authentication fails, users must type their user names and passwords before they can access intranet sites.

Configure global login information for intranet site access

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry solution topology > BlackBerry Domain > Component view.
2. Click MDS Connection Service.
3. On the HTTP tab, click Edit component.
4. In the Protocol service information section, in the Authentication support enabled drop-down list, click Yes.
5. In the Name section, type a global name, and type the web address of the intranet site in the Service URL section.
6. In the Settings section, type a user name and password.
7. Click Save all.

Configuring how the BlackBerry MDS Connection Service connects to BlackBerry devices

Specify the maximum amount of data that a BlackBerry MDS Connection Service can send to BlackBerry devices

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service.
2. Click the instance that you want to change.

3. Click **Edit instance**.

4. On the **General** tab, in the **Flow control** section, in the **Maximum data amount permitted per connection** field, type a number, in KB.

5. Click **Save all**.

### Specify the pending content timeout limit for a BlackBerry MDS Connection Service

You can specify how long a BlackBerry® MDS Connection Service waits for acknowledgment from a BlackBerry device before it deletes pending content for the BlackBerry device.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service**.

2. Click the instance that you want to specify the content timeout limit for.

3. Click **Edit instance**.

4. On the **General** tab, in the **Flow control** section, in the **Flow control timeout** field, type a number, in milliseconds.

5. Click **Save all**.

### Permit Java applications to use scalable socket connections with a BlackBerry MDS Connection Service

**Before you begin:** Verify that your system memory supports scalable socket connections.

1. In the BlackBerry® Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service**.

2. Click the instance that you want to permit scalable socket connections on.

3. Click **Edit instance**.

4. On the **General** tab, in the **Socket connection settings** section, in the **Use scalable sockets** options list, click **Yes**.

5. Click **Save all**.

### Specify the thread pool size of a BlackBerry MDS Connection Service

You can specify the maximum number of threads that a BlackBerry® MDS Connection Service can process at the same time.

**Before you begin:** Verify that your system memory can support the thread pool size that you want to specify.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service**.

2. Click the instance that you want to specify the thread pool size for.

3. Click **Edit instance**.
4. On the General tab, in the Socket connection settings section, in the Thread pool size field, type a number between 100 and 1000.

5. Click Save all.

Specify the maximum number of scalable socket connections

You can specify the maximum number of scalable socket connections that can be open at the same time between BlackBerry® devices and a BlackBerry MDS Connection Service.

Before you begin: Verify that your system memory can support the number of scalable socket connections that you want to specify.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service.

2. Click the instance that you want to specify the maximum number of scalable socket connections for.

3. Click Edit instance.

4. On the General tab, in the Socket connection settings section, in the Use scalable sockets options, select the Yes option.

5. In the Maximum simultaneous scalable sockets field, type a number between 100 and 3500. By default, the maximum number of scalable socket connections is 2000.

6. Click Save all.

Prevent the BlackBerry MDS Connection Service from using scalable HTTP

By default, the BlackBerry® MDS Connection Service 5.0 SP2 or later uses scalable HTTP, which permits the BlackBerry MDS Connection Service to use fewer system resources and to establish more socket connections at one time than previous versions of the BlackBerry MDS Connection Service. When a BlackBerry MDS Connection Service uses scalable HTTP, it streams data to and from BlackBerry devices instead of storing and forwarding the data. If you want a BlackBerry MDS Connection Service to process data as it did in previous versions of the BlackBerry® Enterprise Server Express, you can prevent a BlackBerry MDS Connection Service from using scalable HTTP.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service.

2. Click the instance that you want to prevent from using scalable HTTP.

3. Click Edit instance.

4. On the General tab, in the Socket connection settings section, in the Use scalable HTTP drop-down list, click No.

5. Click Save all.
Specify the port number that the web server listens on for push application requests

You can specify the port number that the web server listens on for HTTP requests and HTTPS requests from server-side push applications. You should change the default port parameters only if a port conflict exists with another service on the same computer.

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service.
2. Click the instance that you want to specify the port number for.
3. Click Edit instance.
4. On the General tab, in the Connection section, perform one of the following actions:
   • To specify the port for HTTP requests, in the Web server listen port field, type the port number.
   • To specify the port for HTTPS requests, in the Web server SSL listen port field, type the port number.
5. Click Save all.

After you finish:
• Restart the BlackBerry MDS Connection Service.
• Notify your organization’s push application developers that you changed the port number that the web server listens on for push application requests.

Restarting BlackBerry Enterprise Server Express components, 277

Specify how often a BlackBerry MDS Connection Service polls for configuration information

You can specify how often a BlackBerry® MDS Connection Service polls the BlackBerry Configuration Database for changes to the administration settings for the BlackBerry MDS Connection Service. The default interval is 5 minutes.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service.
2. Click the instance that you want change.
3. Click Edit instance.
4. On the General tab, in the Database section, in the Database admin configuration cycle timer field, type a time, in minutes.
5. Click Save all.
Setting up the messaging environment

Creating email message filters

You can create email message filters to define which email messages the BlackBerry® Enterprise Server Express forwards from users’ email applications to their BlackBerry devices. When users receive email messages in the incoming message queue, the BlackBerry Enterprise Server Express applies email message filters to determine how to direct the messages: forward, forward with priority, or do not forward to the BlackBerry devices.

Email message filters that you create and apply override the email message filters that users create using the BlackBerry® Desktop Manager, the BlackBerry® Web Desktop Manager, or their BlackBerry devices. You can specify the order that the BlackBerry Messaging Agent applies the email message filters in.

You can create the following types of email message filters:

- global filters: apply to all users on the BlackBerry Enterprise Server Express
- user filters: apply to specific users on the BlackBerry Enterprise Server Express

Users cannot view or change global filters. If you define global filters, you must explain to users that some of the email message filters that they created might not apply to incoming messages.

If you change global filters, the BlackBerry Enterprise Server Express applies the changes immediately.

Create an email message filter that applies to all user accounts on a BlackBerry Enterprise Server Express

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Email.
2. Click the instance that you want to change.
3. Click Edit instance.
4. On the Email message filters tab, in the Email message filter name field, type a name for the email message filter.
5. In the Email message filter rules section, configure the options for the email message filter. Use semicolons (;) to separate multiple items that you specify.
   If you specify multiple users in the From or Sent to fields, or multiple subject terms in the Subject field, the message filter is applied to email messages that contain any of the users or terms that you specify. All of the users or terms that you specify do not have to be satisfied for the message filter to be applied.
6. Perform one of the following tasks:
   - To create an email message filter that does not deliver email messages that match the filter criteria to BlackBerry devices, select Do not forward email messages to the device.
   - To create an email message filter that forwards email messages that match the filter criteria to BlackBerry devices, select Forward email messages to the device.
7. Click the Add icon.
8. To move the email message filter higher or lower in the list, click the Up or Down icons. The BlackBerry® Enterprise Server Express applies email message filters in the order that they are listed in. Organize the email message filters from the least restrictive to the most restrictive.

9. Repeat steps 4 to 8 for each email message filter that you want to add.

10. Click Save all.

Turn on an email message filter that applies to all user accounts on a BlackBerry Enterprise Server Express

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Email.

2. Click the instance that you want to change.

3. Click Edit instance.

4. On the Email message filters tab, click the Edit icon beside the email message filter you want to turn on.

5. In the Enabled drop down list, click Yes.

6. Click Save all.

The BlackBerry Administration Service applies email message filters in the order that they are listed in.

Create an email message filter that applies to a specific user account

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand User.

2. Click Manage users.

3. Search for a user account.

4. In the search results, click the name of the user account.

5. Click Edit user.

6. In the Messaging configuration section, click Default configuration.

7. On the Email tab, in the Email message filter name field, type a name for the email message filter.

8. In the Email message filter rules section, configure the options for the email message filter. Use semicolons (;) to separate multiple items that you specify.

   If you specify multiple users in the From or Sent to fields, or multiple subject terms in the Subject field, the message filter is applied to email messages that contain any of the users or terms that you specify. All of the users or terms that you specify do not have to be satisfied for the message filter to be applied.

9. Perform one of the following tasks:
   • To create an email message filter that does not deliver email messages that match the filter criteria to BlackBerry devices, select Do not forward email messages to the device.
   • To create an email message filter that forwards email messages that match the filter criteria to BlackBerry devices, select Forward email messages to the device.

10. Click the Add icon.

11. To move the email message filter higher or lower in the list, click the Up or Down icons.
The BlackBerry® Enterprise Server Express applies email message filters in the order that they are listed in. Organize the email message filters from the least restrictive to the most restrictive.

12. Click **Continue to user information edit**.
13. Click **Save all**.

**Turn on an email message filter that applies to a specific user account**

1. In the BlackBerry® Administration Service, in the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. In the search results, click the name of the user account.
5. Click **Edit user**.
6. In the **Messaging configuration** section, click **Default configuration**.
7. On the **Email** tab, click the **Edit** icon beside the email message filter that you want to turn on.
8. In the **Enabled** drop-down list, click **Yes**.
9. Click **Continue to user information edit**.
10. Click **Save all**.

The BlackBerry Administration Service applies email message filters in the order that they are listed in.

**Copying existing email message filters to another BlackBerry Enterprise Server Express**

You can copy the existing email message filters for a BlackBerry® Enterprise Server Express and apply them to other instances of the BlackBerry Enterprise Server Express. To create a copy of existing email message filters, you can export the existing email message filters for a BlackBerry Enterprise Server Express as an .xml file. You can then import the .xml file so that you can use it with another instance of the BlackBerry Enterprise Server Express.

**Export email message filters for a BlackBerry Enterprise Server Express**

1. In the BlackBerry® Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > Email**.
2. Click the instance that you want to change.
3. On the **Email message filters** tab, click **Export email message filters**.
4. Click **Download file**.
5. Save the .xml file.

**Import email message filters for a BlackBerry Enterprise Server Express**

*Before you begin:* Export email message filters for a BlackBerry® Enterprise Server Express.
1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > Email**.
2. Click the instance that you want to change.
3. Click **Edit instance**.
4. On the **Email message filters** tab, click **Import email message filters**.
5. In the **Import email message filters section**, click **Browse**. Navigate to the .xml file that contains the email message filters that you want to import.
6. Click **Import email message filters**.
7. Click **Save all**.

**Copying existing email message filters to user accounts**

You can copy the existing email message filters for a user account and apply them to other user accounts. To create a copy of existing email message filters, you must export the existing email message filters for a user account as an .xml file. You can then import the .xml file so that you can use it with other user accounts.

**Export email message filters for a user account**

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. In the search results, click the name of the user account.
5. In the **Messaging configuration** section, click **Default configuration**.
6. On the **Email** tab, click **Export email message filters**.
7. Click **Download file**.
8. Save the .xml file.

**Import email message filters for a user account**

**Before you begin:** Export email message filters for a user account.

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for the user account.
4. In the search results, click the name of the user account.
5. Click **Edit user**.
6. In the **Messaging configuration** section, click **Default configuration**.
7. On the **Email** tab, at the bottom of the screen, click **Import email message filters**.
8. In the **Import email message filters** section, click **Browse**. Navigate to the .xml file that contains the email message filters that you want to import.

9. Click **Import email message filters**.

10. Click **Save all**.

---

### Extension plug-ins for processing messages

You can add extension plug-ins to a BlackBerry® Messaging Agent. The BlackBerry Messaging Agent uses extension plug-ins to process and make changes to email messages and attachments that the BlackBerry Messaging Agent sends to and receives from BlackBerry devices. For example, you can add an extension plug-in to modify the signature in email messages.

Before you add an extension plug-in to the BlackBerry Administration Service, you must install the extension plug-in application on the computer that hosts the BlackBerry® Enterprise Server Express. By default, each BlackBerry Messaging Agent in your organization’s BlackBerry Domain includes the extension plug-in BBAttachBESExtension, which connects the BlackBerry Messaging Agent to the BlackBerry Attachment Service so that the BlackBerry Attachment Service can process email message attachments. If you add multiple extension plug-ins to a BlackBerry Messaging Agent, you can define the order that the BlackBerry Messaging Agent uses the extension plug-ins to process email messages in.

---

### Install an extension plug-in application

To add an extension plug-in to the BlackBerry® Administration Service, you must first install the application for the extension plug-in on the computer that hosts the BlackBerry® Enterprise Server Express.

**Before you begin:** Copy the .dll file for the extension plug-in application to the computer that hosts the BlackBerry Enterprise Server Express.

1. On the computer that hosts the BlackBerry Enterprise Server Express, on the **Start** menu, click **Run**.
2. Type `regedit`.
3. Click **OK**.
4. Perform one of the following actions:
   - If you are running a 32-bit version of Windows®, navigate to `HKEY_LOCAL_MACHINE\Software\Research In Motion\BlackBerry Enterprise Server\Agents`.
   - If you are running a 64-bit version of Windows, navigate to `HKEY_LOCAL_MACHINE\Software\WOW6432Node\Research In Motion\BlackBerry Enterprise Server\Agents`.
5. If necessary, create a DWORD value named **Plugins**.
6. Double-click the **Plugins** DWORD value.
7. In the **Value data** field, type `Name=<DLL_Name> Data=<DLL_Path>`, where `<DLL_Name>` is a descriptive name of the .dll file and `<DLL_Path>` is the full path and file name for the .dll file.
8. Click **OK**.

**After you finish:**
• Restart the BlackBerry Enterprise Server Express.
• Add the extension plug-in to a BlackBerry Messaging Agent.

Related topics
Restarting BlackBerry Enterprise Server Express components, 277

Add an extension plug-in to a BlackBerry Messaging Agent

Before you begin: Install an extension plug-in application on the computer that hosts the BlackBerry® Enterprise Server Express.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Email.
2. Click the instance that you want to change.
3. Click Edit instance.
4. On the Extension plug-ins tab, in the Extension plug-in name field, type the name of the extension plug-in that you want to add.
5. Click the Add icon.
6. Repeat steps 4 and 5 for each extension plug-in that you want to add.
7. If necessary, click the Up and Down icons to set the order that the BlackBerry Messaging Agent uses the extension plug-ins to process email messages in.
8. Click Save all.

Change how a BlackBerry Messaging Agent uses extension plug-ins

The BlackBerry® Messaging Agent uses a BlackBerry® Enterprise Server Express extension process to load extension plug-ins to process email messages. If you do not add an extension plug-in to the BlackBerry Administration Service, and you install the extension plug-in application on the computer that hosts the BlackBerry Enterprise Server Express, the extension plug-in is loaded directly by the BlackBerry Messaging Agent instead of the extension process. To stabilize and manage your organization’s messaging environment, you can change how the BlackBerry Controller starts extension processes. For example, you can configure the BlackBerry Controller to start one extension process for all extension plug-ins, or you can configure the BlackBerry Controller to start separate extension processes for each extension-plug in.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Email.
2. Click the instance that you want to change.
3. Click Edit instance.
4. On the Extension plug-ins tab, in the Extension mode section, in the Extension mode drop-down list, perform one of the following actions:
   • To configure the BlackBerry Controller to start a single extension process that loads all extension plug-ins for all BlackBerry Messaging Agent instances, click single.
To configure the BlackBerry Controller to start a dedicated extension process for each BlackBerry Messaging Agent instance, click **perAgent**.

To configure the BlackBerry Controller to start a dedicated extension process that loads each extension plug-in, click **perExtension**. Each BlackBerry Messaging Agent uses the same extension process to process a specific extension plug-in.

To configure the BlackBerry Controller to start a dedicated extension process for each extension plug-in for each BlackBerry Messaging Agent, click **perAgentperExtension**.

5. Click **Save all**.

### Mapping contact information fields for synchronization and contact lookups

You can map contact information fields from the email applications on users' computers to the contact list fields on the BlackBerry® devices. The information in the fields in the email applications synchronizes to the fields on the BlackBerry devices. You can create the following types of field mappings on the BlackBerry® Enterprise Server Express:

- **global field mappings**: apply to all user accounts in a BlackBerry Domain
- **user field mappings**: apply to specific user accounts

You can map up to four fields that users define in the contact information on their computers to their BlackBerry devices. When users request a remote contact lookup from the contact list, the fields that you configure display on BlackBerry devices.

#### Map a contact information field in an email application to a contact list field on BlackBerry devices

1. In the BlackBerry® Administration Service, on the **Servers and components menu**, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > Synchronization**.
2. Click **Edit component**.
3. On the **Mappings for organizer data synchronization** tab, for each type of organizer data, select the option in the drop-down lists that you want to map the information to on BlackBerry devices.
4. Click **Save all**.

   **After you finish**: To return all organizer data to the default settings, click **Reset global organizer data synchronization mappings**.

#### Map a contact list field in an email application to a contact list field on a BlackBerry device

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management menu**, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. In the search results, click the display name for the user account.
5. Click Edit user.
6. In the Messaging configuration section, click Default configuration.
7. On the Mappings for organizer data synchronization tab, in the Mappings for organizer data synchronization section, select the Turned on option.
8. In the appropriate drop-down lists, select the fields on the BlackBerry device that you want to map the information to.
9. Click Continue to user information edit.
10. Click Save all.

Map a contact information field in an email application to contact list fields on BlackBerry devices

You can map up to four contact list fields that users define in an email application to BlackBerry® devices.
1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. Click Synchronization.
3. Click Edit component.
4. On the Mappings for organizer data synchronization tab, in the Other mappings section, select each User defined string contact list field that you want to map to BlackBerry devices.
5. Click Save all.

After you finish: To return the organizer data to the default settings, click Reset global organizer data synchronization mappings.

Map a contact list field in an email application to a contact list field on a BlackBerry device

You can map up to four contact list fields that users define in an email application to a BlackBerry® device.
1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for a user account.
4. In the search results, click the display name for the user account.
5. Click Edit user.
6. In the Messaging configuration section, click Default configuration.
7. On the Mappings for organizer data synchronization tab, in the Mappings for organizer data synchronization section, select the Turned on option.
8. In the Other mappings section, in each User defined string drop-down list, select the contact field that you want to map to the BlackBerry device.
9. Click **Continue to user information edit.**
10. Click **Save all.**
Making the BlackBerry Web Desktop Manager available to users

Installing the client components of the BlackBerry Web Desktop Manager on users' computers

By default, when users open and log in to the BlackBerry® Web Desktop Manager for the first time, the browser prompts them to accept a client authentication certificate and install the required RIMWebComponents.cab file. The RIMWebComponents.cab file provides the BlackBerry® Device Manager and USB drivers that users require to use the BlackBerry Web Desktop Manager. To install these RIMWebComponents.cab file, users must log in to their computers as a local administrator.

If you use Microsoft® Active Directory® in your organization's environment, consider creating Windows® GPOs to install the client components of the BlackBerry Web Desktop Manager on users' computers automatically. When you use Windows GPOs, the browser does not display the security warning or installation prompts to users, and users do not require local administrator permissions to complete the installation process.

Configuring the BlackBerry Web Desktop Manager, 150

Publish the client files for the BlackBerry Web Desktop Manager in a Windows GPO for Windows XP

If you use Microsoft® Active Directory®, you can create a Windows® GPO to make sure that the browser settings are correct for your organization's environment. Alternatively, you can check the browser settings on users' computers and, if necessary, change them manually.

1. In the BlackBerry® Enterprise Server Express installation files, navigate to tools/RIMWebComponents.
2. Copy the RIMWebComponents.msi file to a shared network folder.
3. In Microsoft Active Directory Users and Computers, right-click the organizational unit that you want to assign the Windows GPO to. Click Properties.
5. In the Name field, type a name for the new GPO.
6. In the list of GPOs, click the GPO name.
7. Click Edit.
8. In the Group Policy Editor menu, click User Configuration > Software Settings.
10. Type the UNC path and name of the RIMWebComponents.msi. The path must be typed in UNC format (for example, \ComputerName\Applications\Testing).
11. Click Open.
12. In the **Deploy Software** window, click **Advanced**.
13. Click **OK**.
14. In the **Group Policy Object** properties window, on the **Deployment** tab, under **Deployment type**, click **Published**.
15. In the **Installation user interface options** menu, click **Basic**.
16. If the computer runs Windows Server® 2003, perform the following actions:
   a. On the **Deployment** tab, click **Advanced**.
   b. Click **Include OLE class and product information**.
17. Click **OK**.

**After you finish:** Perform one of the following actions:
- On each user's computer that runs a 32-bit version of Windows, add the registry key `HKEY_LOCAL_MACHINE\Software\Microsoft\WindowCurrentVersion\Internet Settings\UseCoInstall`.
- On each user's computer that runs a 64-bit version of Windows, add the registry key `HKEY_LOCAL_MACHINE\Software\WOW6432Node\Microsoft\WindowCurrentVersion\Internet Settings\UseCoInstall`.

**Publish the client files for the BlackBerry Web Desktop Manager in a Windows GPO for Windows Vista**

**Before you begin:**
- Add the web address for the BlackBerry® Administration Service to the list of trusted web sites in the web browser.
- Download and install the Microsoft® Group Policy Management Console with Service Pack 1. For more information about installing the service pack, see [www.microsoft.com](http://www.microsoft.com).

1. Open the Microsoft Exchange Management Console.
2. Click **File > Add/Remove Snap-in**.
3. In the **Available Snap-ins** list, click **Group Policy Management**.
4. Click **Add**.
5. Click **OK**.
6. Expand **Group Policy Management > Forest> Domains**.
7. Click the domain name.
8. Right-click the organizational unit that you want to assign the Windows® GPO to.
9. Click **Create a GPO in this domain, and link it here**.
10. In the **Name** field, type a name for the new GPO.
11. Click **OK**.
12. Right-click the GPO that you just created.
13. Click **Edit**.
14. On the **Computer Configuration** menu, click **Policies**.
15. Expand Administrator Templates.
17. Click ActiveXInstaller Service.
18. Right-click Approved Installation Sites for ActiveX Controls.
20. On the Settings tab, click Enabled.
21. Click Show.
22. Click Add.
23. In the Enter the name of the item to be added field, type the web address for the BlackBerry Administration Service.
24. In the Enter the value of the item to be added field, type 2,2,1,0.
25. In each dialogue box, click OK.

Configure the Microsoft ActiveX Installer on Windows Vista

1. On the computer that hosts the BlackBerry® Web Desktop Manager, click Start > Control Panel > Programs and Features.
2. Click Turn Windows Features On or Off.
3. Select ActiveX Installer Service.
4. Click OK.

Configure users' computers to install the client file for the BlackBerry Web Desktop Manager automatically

You can create a new Windows® GPO so that you can add the registry key HKEY_LOCAL_MACHINE\Software \Microsoft\Windows\CurrentVersion\Internet Settings\UseCoInstall to users' computers. When you add the registry key, the users' computers install the RIMWebComponents.msi file and other Microsoft® ActiveX® controls automatically. The Windows GPO adds the registry key to computers in the organizational unit that you assigned the GPO to.

1. On the computer that hosts Microsoft® Active Directory®, in a new text file, copy and paste the following lines:

    CLASS MACHINE
    CATEGORY !!RegistrySettings
    KEYNAME "Software\Microsoft\Windows\CurrentVersion\Internet Settings"
    ;KEYNAME "Software\Policies\Microsoft\Windows\CurrentVersion\Internet Settings"
    POLICY !!EnableActiveXInstallFromAD
    EXPLAIN !!EnableActiveXInstallFromAD_Explain
Configure users' computers to install the client file for the BlackBerry Web Desktop Manager automatically

 VALUENAME "UseCoInstall"
 VALUEON NUMERIC 1
 VALUEOFF NUMERIC 0
 END POLICY
 END CATEGORY

[strings]
 EnableActiveXInstallFromAD="Allow user computers to install administrator-approved Microsoft ActiveX components."
 EnableActiveXInstallFromAD_Explain="Allow user computers to install administrator-approved Microsoft ActiveX components."
 RegistrySettings="Registry Settings"

2. Name the file EnableActiveXInstallFromAD.adm and save it.
3. In Microsoft Active Directory Users and Computers, right-click the organizational unit that you want to assign the Windows GPO to. Click Properties.
5. In the Name field, type a name for the new GPO.
6. In the list of GPOs, click the GPO name. Click Edit.
7. In the Group Policy Object Editor list, click Computer Configuration > Administrative Templates.
8. Right-click Administrative Templates. Perform one of the following actions:
   • If the computer uses Windows® 2000 Server, clear the View – Show Policies Only option.
   • If the computer uses Windows Server® 2003, click View – Filtering. Clear the Only show policy settings that can be fully managed check box.
9. Right-click Administrative Templates. Click Add/Remove Templates.
10. Add the EnableActiveXInstallFromAD.adm custom administrative template to the Windows GPO.
11. Click Administrative Templates > Registry Settings.
12. Double-click Allow user computers to install administrator-approved Microsoft ActiveX components.
13. Click Enabled.
14. Click OK.

After you finish: For more information about registry-based Windows GPOs, visit technet.microsoft.com to read Using Administrative Template Files with Registry-Based Group Policy.
Make the BlackBerry Web Desktop Manager available to users

The BlackBerry® Web Desktop Manager web address is https://<full_computer_name>/webdesktop/login. If you customized the BlackBerry Web Desktop Manager text colors or image and you want to display the changes on the login screen, you must direct users to https://<full_computer_name>/webdesktop/app?page=Login&service=page&orgId=0.

Send users the following information:

- BlackBerry Web Desktop Manager web page address
- login information that you configured for the users in your messaging environment
- if necessary, the name of the domain that your messaging server is located in
Configuring the BlackBerry Web Desktop Manager

You can configure the BlackBerry® Web Desktop Manager to permit users to perform administrative tasks such as creating a password for wireless activation, locking a lost or stolen BlackBerry device, deleting data from a device, or deactivating a device.

You can also customize the UI of the BlackBerry Web Desktop Manager by changing the text colors or displaying a custom image, such as your organization’s logo, to match the design of your organization’s intranet.

For more information about the IT policies that control the tasks that users can perform in the BlackBerry Web Desktop Manager, see the BlackBerry Enterprise Server Express Policy Reference Guide.

For more information about using the BlackBerry Web Desktop Manager to update the BlackBerry® Device Software, see the BlackBerry Device Software Update Guide.

Permit users to perform administrative tasks using the BlackBerry Web Desktop Manager

You can permit users to perform the following administrative tasks using the BlackBerry® Web Desktop Manager:

• specify an enterprise activation password for a BlackBerry device
• specify a new device password and lock a device
• delete all device data and deactivate a device
• assign a new device to a user account

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution Topology > BlackBerry Domain > Component view.
2. Click BlackBerry Administration Service.
3. Click Edit component.
4. On the BlackBerry Web Desktop Manager information tab, change Allow users to perform self service tasks to Yes.
5. Click Save all.

Permit users to create activation passwords using the BlackBerry Web Desktop Manager

You can specify whether the BlackBerry® Web Desktop Manager permits users to create their own activation passwords so that they can activate their BlackBerry devices over the wireless network. By default, users can create their own activation passwords. If you do not permit users to create their own activation passwords, in the BlackBerry Web Desktop Manager, the Device setup screen in the Advanced Settings tab is hidden.

1. In the BlackBerry Administration Service, in the Servers and components menu, expand BlackBerry Solution Topology > BlackBerry Domain > Component view.
Permit users to activate BlackBerry devices using the BlackBerry Web Desktop Manager

You can specify whether users can use the BlackBerry® Web Desktop Manager to activate BlackBerry devices using a wired connection to a computer.

1. In the BlackBerry Administration Service, in the Servers and components menu, expand BlackBerry Solution Topology > BlackBerry Domain > Component view.
2. Click BlackBerry Administration Service.
3. Click Edit component.
4. On the BlackBerry Web Desktop Manager information tab, perform one of the following actions:
   • To permit users to activate or re-activate BlackBerry devices, change Allow user wireline activation to Activate Any PIN.
   • To permit users to activate new BlackBerry devices only, change Allow user wireline activation to Activate Unused PINs only.
   • To prevent users from activating BlackBerry devices, change Allow user wireline activation to No.
5. Click Save all.

Permit users to back up and restore data using the BlackBerry Web Desktop Manager

You can specify whether users can back up and restore data on BlackBerry® devices using the BlackBerry® Web Desktop Manager.

1. In the BlackBerry Administration Service, in the Servers and components menu, expand BlackBerry Solution Topology > BlackBerry Domain > Component view.
2. Click BlackBerry Administration Service.
3. Click Edit component.
4. On the BlackBerry Web Desktop Manager information tab, change Allow users to back up and restore data to Yes.
5. Click Save all.
After you finish: To prevent users from backing up and restore data from their BlackBerry devices, change **Allow user backup/restore operations** to No.

Configure the domains for backing up data using the BlackBerry Web Desktop Manager

You can specify the domains that users' computers are located in so that you can limit which users can back up data on their BlackBerry® devices using the BlackBerry® Web Desktop Manager.

1. In the BlackBerry Administration Service, in the **Servers and components** menu, expand **BlackBerry Solution Topology > BlackBerry Domain > Component view**.
2. Click **BlackBerry Administration Service**.
3. Click **Edit component**.
4. On the **BlackBerry Web Desktop Manager information** tab, in the **Device backup domains** field, type a domain that permits the user to back up data.
5. Click the **Add** icon.
6. Repeat steps 4 and 5 for each domain that you want to add.
7. Click **Save all**.

Change the text colors in the BlackBerry Web Desktop Manager

You can change the text colors in BlackBerry® Web Desktop Manager to match the colors that your organization uses for UIs.

1. In the BlackBerry® Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view**.
2. Click **BlackBerry Administration Service**.
3. On the **Font colors** tab, click **Edit Component**.
4. Type the name of the color, in hexadecimal format, for the color of the BlackBerry Web Desktop Manager text that you want to change.
5. Click **Save All**.

**BlackBerry Web Desktop Manager text colors**

</table>

### Display a custom image in the BlackBerry Web Desktop Manager

You can display a custom image, such as your organization's logo, in the upper-right corner of the BlackBerry® Web Desktop Manager. The image file that you specify must be a .jpg or .gif file that is located on a trusted web site.

1. In the BlackBerry Administration Service, in the **Servers and components** menu, expand **Blackberry Solution Topology > BlackBerry Domain > Component view**.
2. Click **Blackberry Administration Service**.
3. Click **Edit component**.
4. On the **Company logos** tab, type the HTTPS URL for your organization's logo.
5. Click **Save all**.
Display the domain name on the login page of the BlackBerry Web Desktop Manager

You can specify the domain name that appears automatically in the Domain field when users browse to the BlackBerry® Web Desktop Manager login page. You can specify only one domain name. You can also provide the domain name to users when you send their login information to them.

1. In the BlackBerry Administration Service, in the Servers and components menu, expand BlackBerry Solution Topology > BlackBerry Domain > Component view.
2. Click BlackBerry Administration Service.
3. Click Edit component.
4. On the Microsoft® Active Directory® authentication tab, in the Login domain field, type the name of the default domain that users log in from.
5. Click Save all.
Creating and configuring Wi-Fi profiles and VPN profiles

Creating and configuring Wi-Fi profiles

You can use Wi-Fi® configuration settings and optional VPN configuration settings to manage BlackBerry® devices that can operate on both mobile and Wi-Fi networks.

You can manage the configuration settings for user accounts that are associated with a BlackBerry® Enterprise Server Express by creating Wi-Fi profiles. You can create and assign one or more Wi-Fi profiles to a user account or to a group using a process that is similar to the process you use to create an IT policy and assign it to a user account.

For more information, see the BlackBerry Enterprise Server Feature and Technical Overview.

Prerequisites: Creating Wi-Fi profiles and VPN profiles

You must install and configure wireless access points for your organization’s enterprise Wi-Fi® network. Perform the following actions:

• Verify that the access points comply with the IEEE® 802.11a™ standard, IEEE® 802.11b™ standard, or IEEE® 802.11g™ standard.
• Verify the number of connections for each access point to make sure that the access points can manage additional traffic.
• Verify that users can roam between access points.
• Refer to the documentation for the access points to complete a site survey and assign channels.
• If your organization does not use a switched enterprise Wi-Fi network and your organization has multiple subnets, configure the subnets to cover the same physical area. The configuration can affect how users send or receive calls.
• Assign an SSID to each access point or each group of access points that share an SSID.
• If users can roam between the access points, configure all of the relevant SSID profiles on each access point.
• If your organization uses NAT traversal, verify that the access points support NAT traversal.

You must configure authentication and encryption for the access points. Perform the following actions:

• Configure authentication using a supported authentication method. For example, if your organization uses layer 2 access security, verify that your organization uses one of the supported layer 2 security methods.
• Configure encryption using a supported encryption method.

If your organization’s environment requires a VPN concentrator, configure a VPN concentrator for VPN access security using IPsec VPN. See the administrator for your organization’s firewall or VPN concentrator to determine the appropriate configuration settings.

You must configure firewall settings. Perform the following actions:

• If your organization use a proxy firewall, configure the proxy server so that it is transparent to users.
• Verify that the IP addresses for the BlackBerry® Domain that are relevant to your organization’s environment are permitted addresses.
• Verify that the Wi-Fi network can connect to the BlackBerry Router.
• Verify that you add the IP address of the BlackBerry Router to the DNS server.

Configure the ports for the Wi-Fi network.

You must configure access to the DHCP server and DNS server. Perform the following actions:
• If necessary, configure your organization’s enterprise Wi-Fi network to access the DHCP server.
• If you do not use static IT addresses, use the DNS lookup tool on a Wi-Fi enabled BlackBerry device to verify that the BlackBerry device can access the DHCP server.
• Use the DNS lookup tool on a Wi-Fi enabled BlackBerry device to verify that the BlackBerry device can access one or more DNS servers.

If your organization uses an AAA server, you must configure it. Perform the following actions:
• Configure the AAA server to support the Wi-Fi authentication method that your organization uses.
• Permit all access points to use the AAA server.

If you configure service-specific access security, create a captive portal login.

You must configure user accounts in your organization’s environment. Perform the following actions:
• Create authentication credentials for the user accounts.
• If your organization uses EAP-TLS, EAP-TTLS, or PEAP authentication methods, permit the BlackBerry® Enterprise Server Express to access to the PKI infrastructure and certificates.

Add the MAC addresses of every BlackBerry device that you permit to access a specific enterprise Wi-Fi network (an allowed list) or prevent from accessing a specific enterprise Wi-Fi network (a restricted list) to the controller for each access point.

**Connection types and port numbers for a Wi-Fi network**

Port assignments might vary by mobile network provider.

</table>
Create a Wi-Fi profile

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Policy > Wi-Fi configuration.
2. Click Create Wi-Fi profile.
3. In the Name field, type a name for the Wi-Fi® profile.
4. Click Save.

After you finish: Configure the Wi-Fi profile.

Create a Wi-Fi profile based on an existing Wi-Fi profile

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Policy > Wi-Fi configuration.
2. Click Manage Wi-Fi profiles.
3. Click the name of the Wi-Fi® profile that you want to copy.
4. Click Copy profile.
5. Type a name for the new Wi-Fi profile.
6. Click Save.

After you finish: Configure the Wi-Fi profile.

Configure a Wi-Fi profile on a BlackBerry device

You can instruct BlackBerry® device users to perform the following task if you want users to configure a Wi-Fi® profile for the Wi-Fi networks that you did not create a Wi-Fi profile for in the BlackBerry® Administration Service. By default, new Wi-Fi profiles appear at the end of the Wi-Fi profile list on the BlackBerry device.

1. On the Home screen or in the application list, click Manage Connections.
2. Click Set Up Wi-Fi Network.
3. Perform the instructions on the screen.
4. On the Wi-Fi Setup Complete screen, perform any of the following actions:
   - To change the order of the Wi-Fi profiles, click Prioritize Wi-Fi Profiles.
   - To specify registration information for the Wi-Fi network, click Wi-Fi Hotspot Login.
5. Click Finish.

Assign a Wi-Fi profile to a group

You can assign one or more Wi-Fi® profiles to a group.

Before you begin: Create and configure a Wi-Fi profile.

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Group.
2. Click Manage groups.
3. In the Manage groups section, click the group that you want to assign a Wi-Fi profile to.
4. On the Wi-Fi profiles tab, click Edit group.
5. In the Available Wi-Fi profiles list, click the profile that you want to assign to the group and click Add. Repeat for any additional profiles that you want to assign to the group.
6. Click Save all.

When you assign a Wi-Fi profile to a group that has at least one user account assigned to it, the BlackBerry Administration Service creates jobs to deliver the resulting objects to BlackBerry devices.

**Assign a Wi-Fi profile to a user account**

You can assign more than one Wi-Fi® profile to a user account.

**Before you begin:** Create and configure a Wi-Fi profile.

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for one or more user accounts.
4. Click the name of the user account that you want to assign a Wi-Fi profile to.
5. Click Edit user.
6. On the Wi-Fi profiles tab, in the Wi-Fi profile name section, in the drop-down list, click the Wi-Fi profile.
7. If required, in the Wi-Fi User Specific Settings section, specify the login information for the Wi-Fi profile.
8. Click the Add icon.
9. Click Save all.

When you assign a Wi-Fi profile to a user account, the BlackBerry Administration Service creates a job to deliver the resulting object to the BlackBerry device.

**Configure a Wi-Fi profile**

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Policy > Wi-Fi configuration.
2. Click Manage Wi-Fi profiles.
3. Click the name of a Wi-Fi® profile.
4. Click Edit profile.
5. On the Wi-Fi profile settings tab, change the values for the configuration settings.
6. Click Save All.

**After you finish:**
- For information about the Wi-Fi configuration settings, see the BlackBerry Enterprise Server Policy Reference Guide.
If the Wi-Fi network includes a captive portal, verify that you changed the WLAN Enable Authentication Page option to True to permit users to access the captive portal using the WLAN Login browser on their BlackBerry devices.

- To update the BlackBerry device information immediately, resend the IT policy to the BlackBerry device.

Creating and configuring VPN profiles

Wi-Fi® enabled BlackBerry® devices have built-in VPN clients that supports several types of VPN concentrators.

To create a VPN profile, you configure the VPN configuration settings (for example, the IP address of the VPN concentrator, user names and passwords, and cryptographic methods that the BlackBerry® Enterprise Server Express uses) on a BlackBerry device or using a VPN profile or IT policy. You can assign one or more VPN profiles to a user account or to a group. If a user account has a VPN profile, you can associate the VPN profile with the Wi-Fi profile for the user account.

Depending on your organization's security policy, you can save a user name and password to a BlackBerry device to prevent the BlackBerry device from prompting the user for the login information the first time (or each time) the BlackBerry device connects to the enterprise Wi-Fi network.

Create a VPN profile

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Policy > Wi-Fi configuration.
2. Click Create VPN profile.
3. In the Name field, type a name for the VPN profile.
4. Click Save.

After you finish: Configure the VPN profile.

Create a VPN profile based on an existing VPN profile

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Policy > Wi-Fi configuration.
2. Click Manage VPN profiles.
3. Click the name of the VPN profile that you want to copy.
4. Click Copy profile.
5. Type a name for the new VPN profile.
6. Click Save.

After you finish: Configure the VPN profile.
Configure a VPN profile

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Policy > Wi-Fi configuration.
2. Click Manage VPN profiles.
3. Click the name of the VPN profile.
4. Click Edit profile.
5. On the VPN profile settings tab, change the values for the configuration settings.
6. Click Save All.

After you finish:
- For information about VPN configuration settings, see the BlackBerry Enterprise Server Policy Reference Guide.
- To update BlackBerry device information immediately, resend the IT policy to the BlackBerry device.

Assign a VPN profile to a group

You can assign one or more VPN profiles to a group.

Before you begin: Create and configure a VPN profile.

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Group.
2. Click Manage groups.
3. In the Manage groups section, click the group that you want to assign a VPN profile to.
4. On the VPN profiles tab, click Edit group.
5. In the Available VPN profiles list, click the profile that you want to assign to the group and click Add. Repeat for any additional profiles that you want to assign to the group.
6. Click Save.

When you assign a VPN profile to a group that has at least one user account assigned to it, the BlackBerry Administration Service creates jobs to deliver the resulting objects to BlackBerry devices.

Assign a VPN profile to a user account

You can assign one or more VPN profile to a user account.

Before you begin: Create and configure a VPN profile.

1. In the BlackBerry® Administration Service, expand User.
2. Click Manage users.
3. Search for a user account.
4. Click the display name for the user account.
5. Click Edit user.
6. On the **VPN profiles** tab, in the **VPN profile name** section, in the drop-down list, click the appropriate VPN profile.

7. If required, in the **VPN User Specific Settings** section, specify the login information that you want to associate with the VPN profile.

8. Click the **Add** icon.

9. Click **Save All**.

When you assign a VPN profile to a user account, the BlackBerry Administration Service creates a job to deliver the resulting object to the BlackBerry device.

**Associate a VPN profile with a Wi-Fi profile**

To permit a BlackBerry® device to connect to a Wi-Fi® network using a VPN session, you must associate a VPN profile with a Wi-Fi profile that you assigned to the user account.

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **Policy > Wi-Fi configuration**.
2. Click **Manage Wi-Fi profiles**.
3. Click the name of the Wi-Fi profile.
4. Click **Edit profile**.
5. On the **Wi-Fi profile settings** tab, in the **Wi-Fi Associations** section, in the **VPN profile** drop-down list, click the VPN profile that you want to associate with the Wi-Fi profile.
6. Click **Save All**.

After you finish: To update the BlackBerry device information immediately, resend the IT policy to the BlackBerry device.

**Delete a Wi-Fi profile**

**Before you begin:** Verify that the Wi-Fi® profile is not assigned to a user account.

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **Policy > Wi-Fi configuration**.
2. Click **Manage Wi-Fi profiles**.
3. Click the name of a Wi-Fi profile.
4. Click **Delete profile**.
5. Click **Yes - Delete the profile**.

**Delete a VPN profile**

**Before you begin:** Verify that the VPN profile is not assigned to a user account or associated with a Wi-Fi® profile.
1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Policy > Wi-Fi configuration.
2. Click Manage VPN profiles.
3. Click the name of a VPN profile.
4. Click Delete profile.
5. Click Yes - Delete the profile.

Importing profile information from a .csv file

You can update the Wi-Fi® profiles and VPN profiles that you want to assign to user accounts and the user names and passwords for the profiles by importing a .csv file using the BlackBerry Administration Service. When you import profile information from a file, you can configure the profile information for multiple user accounts at the same time.

The .csv file must contain the following information:
• user accounts that you want to update
• names of profiles that you want to change
• whether you want to add, remove, or change the profiles

Best practices: Creating a .csv file that contains profile information that you want to import

Consider the following guidelines:
• Specify only one action that you want the BlackBerry® Enterprise Server Express to perform in each row of the file.
• To assign more than one action to a user account, create multiple rows for the user account.
• If you are using a text editor to create the .csv file, include a comma (,) after the value that appears in each field in each row. If a field does not contain a value, include only a comma in the field.
• If you are using a text editor to create the .csv file, include a character return at the end of each row.
• If you are using a text editor to create the .csv file, use quotation marks (" ") if the value for a field contains a space (for example, "Westlee Barichak").
• Add no more than 2000 actions to a file.
• Assign a maximum of 32 profiles to BlackBerry devices that are running BlackBerry® Device Software versions that are earlier than 4.5.0.
• Assign a maximum of 64 profiles to BlackBerry devices that are running BlackBerry Device Software version 4.5.0 and later.

Create a .csv file that contains profile information that you want to import

Before you begin: Using the BlackBerry® Administration Service, create profiles and specify the configuration settings for the profiles.
1. Using the BlackBerry Administration Service, export user information for the user accounts that you want to update profile information for to a .csv file.

2. In any application that permits you to update .csv files, add the following fields to the .csv file that you exported in step 1:
   - Attribute Name
   - Attribute Type
   - Action
   - User Name
   - Password

3. Configure the fields for each user account in the file.

4. Save the changes.

Example: Adding profile information to user accounts

<table>
<thead>
<tr>
<th>User Id</th>
<th>Display Name</th>
<th>PIN</th>
<th>Email Address</th>
<th>Logon Name</th>
<th>Attribute Name</th>
<th>Attribute Type</th>
<th>Action</th>
<th>User Name</th>
<th>Password</th>
</tr>
</thead>
<tbody>
<tr>
<td>16</td>
<td>Westlee Barichak</td>
<td></td>
<td></td>
<td><a href="mailto:wbarichak@example.com">wbarichak@example.com</a></td>
<td>wifi_1</td>
<td>WLAN</td>
<td>ADD</td>
<td>test user</td>
<td>test password</td>
</tr>
<tr>
<td>17</td>
<td>Jovanka Buac</td>
<td></td>
<td></td>
<td><a href="mailto:jbuac@example.com">jbuac@example.com</a></td>
<td>vpn_1</td>
<td>VPN</td>
<td>ADD</td>
<td></td>
<td></td>
</tr>
<tr>
<td>8</td>
<td>Sherisse Da Silva</td>
<td>2072C4B7</td>
<td><a href="mailto:sdasilva@example.com">sdasilva@example.com</a></td>
<td>wifi_1</td>
<td>WLAN</td>
<td>ADD</td>
<td>wlan_user</td>
<td>wlan_password</td>
<td></td>
</tr>
<tr>
<td>8</td>
<td>Sherisse Da Silva</td>
<td>2072C4B7</td>
<td><a href="mailto:sdasilva@example.com">sdasilva@example.com</a></td>
<td>wifi_1</td>
<td>WLAN</td>
<td>ADD</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Example: Changing profile information that you assigned to user accounts

<table>
<thead>
<tr>
<th>User Id</th>
<th>Display Name</th>
<th>PIN</th>
<th>Email Address</th>
<th>Logon Name</th>
<th>Attribute Name</th>
<th>Attribute Type</th>
<th>Action</th>
<th>User Name</th>
<th>Password</th>
</tr>
</thead>
<tbody>
<tr>
<td>16</td>
<td>Westlee Barichak</td>
<td></td>
<td></td>
<td><a href="mailto:wbarichak@rim.com">wbarichak@rim.com</a></td>
<td>wlan_1</td>
<td>WLAN</td>
<td>UPDATE</td>
<td>update_username</td>
<td>update_password</td>
</tr>
<tr>
<td>8</td>
<td>Sherisse Da Silva</td>
<td>2072C4B7</td>
<td><a href="mailto:sdasilva@.rim.com">sdasilva@.rim.com</a></td>
<td>wifi_1</td>
<td>WLAN</td>
<td>UPDATE</td>
<td>update_username</td>
<td>update_password</td>
<td></td>
</tr>
</tbody>
</table>

Example: Removing profile information from user accounts

<table>
<thead>
<tr>
<th>User Id</th>
<th>Display Name</th>
<th>PIN</th>
<th>Email Address</th>
<th>Logon Name</th>
<th>Attribute Name</th>
<th>Attribute Type</th>
<th>Action</th>
<th>User Name</th>
<th>Password</th>
</tr>
</thead>
<tbody>
<tr>
<td>8</td>
<td>Lou Sicoli</td>
<td>2072C4B7</td>
<td><a href="mailto:lsicoli@example.com">lsicoli@example.com</a></td>
<td>wlan_1</td>
<td>WLAN</td>
<td>DELETE</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>9</td>
<td>Sarah Symonds</td>
<td>2072C4B7</td>
<td><a href="mailto:ssymonds@example.com">ssymonds@example.com</a></td>
<td>vpn_1</td>
<td>VPN</td>
<td>DELETE</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>16</td>
<td>Westlee Barichak</td>
<td></td>
<td></td>
<td><a href="mailto:wbarichak@example.com">wbarichak@example.com</a></td>
<td>wlan_1</td>
<td>WLAN</td>
<td>DELETE</td>
<td></td>
<td></td>
</tr>
<tr>
<td>16</td>
<td>Westlee Barichak</td>
<td></td>
<td></td>
<td><a href="mailto:wbarichak@example.com">wbarichak@example.com</a></td>
<td>vpn_1</td>
<td>VPN</td>
<td>DELETE</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Fields in the .csv file that contains profile information

The following table describes the fields that you can configure in a .csv file. The BlackBerry® Administration Service uses the fields in the .csv file to update profile information that you assigned to user accounts.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>User Id</td>
<td>This field specifies the user identifier that the BlackBerry Enterprise Server Express creates for each user account. You must specify a value in this field.</td>
</tr>
<tr>
<td>Display Name</td>
<td>This field specifies the user name for the user account.</td>
</tr>
<tr>
<td>PIN</td>
<td>This field specifies the BlackBerry device PIN.</td>
</tr>
<tr>
<td>Logon Name</td>
<td>This field specifies the name that the user can use to log in to the BlackBerry Administration Service or BlackBerry® Web Desktop Manager.</td>
</tr>
<tr>
<td>Attribute Name</td>
<td>This field specifies the name of the Wi-Fi® profile or VPN profile. You must specify a value in this field.</td>
</tr>
<tr>
<td>Attribute Type</td>
<td>This field specifies whether the profile is a Wi-Fi profile or VPN profile. You must specify either WLAN or VPN as the value in this field.</td>
</tr>
<tr>
<td>Action</td>
<td>This field specifies whether you want to add, remove, or update the profile. You must specify ADD, DELETE, or UPDATE as the value in this field.</td>
</tr>
<tr>
<td>User Name</td>
<td>This field specifies the user name that the BlackBerry device can use to access the enterprise Wi-Fi network or VPN, if a user name is required.</td>
</tr>
<tr>
<td>Password</td>
<td>This field specifies the password that the BlackBerry device can use to access the enterprise Wi-Fi network or VPN, if a password is required. You can include quotation marks (&quot; &quot;) in the password.</td>
</tr>
</tbody>
</table>

**Import profile information from a .csv file**

The BlackBerry® Administration Service processes actions in the order that they appear in the .csv file. If two actions that you listed in the file contradict each other, the action that appears closer to the end of the file is the action that the BlackBerry Administration Service processes. If the BlackBerry Administration Service notices an error that is specific to an action during the import process (for example, you formatted an action incorrectly in the .csv file), the BlackBerry Administration Service continues to process the remaining actions in the file and displays an error message for the action that the BlackBerry Administration Service could not process.

1. In the BlackBerry Administration Service, expand **User > Manage users**.
2. In the **Search for users** section, click **Update WLAN Information for users from a List**.
3. Click **Browse**.
4. Navigate to the .csv file that you want to import.
5. Click **Open**.
6. Click **Save**.
Configuring encryption and authentication methods for Wi-Fi enabled BlackBerry devices

For information about the encryption and authentication methods for Wi-Fi® connections, see the BlackBerry Enterprise Solution Security Technical Overview.

Configuring WEP encryption

WEP encryption uses matching encryption keys that are located at wireless access points and wireless clients to secure wireless communication.

To configure WEP encryption, you must distribute the WEP keys in the Wi-Fi® profiles that you assign to user accounts. The BlackBerry® Enterprise Server Express sends the WEP key information when users activate Wi-Fi enabled BlackBerry devices.

The WEP keys on BlackBerry devices must match the WEP keys that are located at the access points.

You can configure four WEP keys and a default key ID. The WEP key numbering on BlackBerry devices does not match the WEP key numbering in the configuration settings of the Wi-Fi profile for the enterprise Wi-Fi network. For example, WEP key 1 on the BlackBerry device is WEP key 0 in the configuration settings, and WEP key 2 on the BlackBerry device is WEP key 1 in the configuration settings. You type or copy the WEP keys for the access points as a string of hexadecimal digits.

BlackBerry devices do not support a WEP passphrase.

Configure WEP keys for BlackBerry devices using a Wi-Fi profile

**Before you begin:** Obtain the WEP keys for the wireless access point. For more information, see the documentation for the access point.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand **Policy > Wi-Fi configuration**.
2. Click **Manage Wi-Fi profiles**.
3. Click the name of the Wi-Fi® profile that you want to change.
4. Click **Edit profile**.
5. On the **Wi-Fi profile settings** tab, configure the values for the following configuration settings:
   - Wi-Fi WEP Key 0
   - Wi-Fi WEP Key 1
   - Wi-Fi WEP Key 2
   - Wi-Fi WEP Key 3
6. Click **Save All**.

**After you finish:**
- Assign the Wi-Fi profile to the user accounts.
• Resend the IT policy that you assign to the user accounts to Wi-Fi enabled BlackBerry devices.

Configuring PSK encryption

The IEEE® 802.1X™ standard specifies PSK encryption as an access control method for enterprise Wi-Fi® networks. You can use PSK encryption in small office and home environments where it is not feasible to configure server-based authentication.

To configure PSK encryption, you must distribute a passphrase to Wi-Fi enabled BlackBerry® devices that matches the key or passphrase for the wireless access points. You must distribute the passphrase using the Wi-Fi profiles that you assign to user accounts. The BlackBerry® Enterprise Server Express sends the passphrase when users activate the BlackBerry devices.

For more information about how the BlackBerry® Enterprise Solution supports PSK encryption, see the BlackBerry Enterprise Server Security Technical Overview.

Configure PSK encryption data for BlackBerry devices using a Wi-Fi profile

Before you begin: Obtain the passphrase for the wireless access point. For more information, see the documentation for the access point.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand Policy > Wi-Fi configuration.
2. Click Manage Wi-Fi profiles.
3. Click the name of the Wi-Fi® profile that you want to change.
4. Click Edit profile.
5. On the Wi-Fi profile settings tab, in the Wi-Fi Preshared Key field, type the passphrase.
6. Click Save All.

After you finish:
• Assign the Wi-Fi profile to the user accounts.
• Resend the IT policy that you assign to the user accounts to Wi-Fi enabled BlackBerry devices.

Configuring LEAP authentication

LEAP authentication is a proprietary authentication method that was developed by Cisco® Systems. LEAP authentication provides one-side, server-based authentication between an enterprise Wi-Fi® network and Wi-Fi enabled BlackBerry® devices and provides per-client dynamic generation of WEP keys and automatic WEP key updates during a session.
BlackBerry devices support LEAP authentication that uses a user name and password. You must distribute the user name and password using a Wi-Fi profile that you assign to user accounts. BlackBerry devices use a one-way function to encrypt passwords before they send the passwords to the authentication server.

For more information about how the BlackBerry® Enterprise Solution supports LEAP authentication, see the BlackBerry Enterprise Server Security Technical Overview.

**Configure LEAP authentication data for BlackBerry devices using a Wi-Fi profile**

**Before you begin:**
- Using the wireless access point, configure the LEAP settings to accept SSID association requests from users that have the credentials that you specify or to identify the authentication server that the Wi-Fi® enabled BlackBerry devices use to verify user credentials. For more information, see the documentation for your organization's access points.
- Configure strong password policies if Wi-Fi network authentication uses LEAP authentication.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand Policy > Wi-Fi configuration.
2. Click Manage Wi-Fi profiles.
3. Click the name of the Wi-Fi profile that you want to change.
4. Click Edit profile.
5. On the Wi-Fi profile settings tab, perform the following actions:
   - In the Wi-Fi User Name field, type the user name for LEAP authentication.
   - In the Wi-Fi User Password field, type the password for LEAP authentication.
6. Click Save All.

**After you finish:**
- Assign the Wi-Fi profile to the user accounts.
- Resend the IT policy that you assign to the user accounts to BlackBerry devices.

Creating and configuring Wi-Fi profiles, 155

**Configuring PEAP authentication**

If your organization implements PEAP authentication, Wi-Fi® enabled BlackBerry® devices must authenticate to an authentication server before they can connect to the enterprise Wi-Fi network.

PEAP authentication requires that BlackBerry devices trust the authentication server certificate. To trust the authentication server certificate, BlackBerry devices must trust the certificate authority that issued the certificate. A certificate authority that the BlackBerry devices and the authentication server trust mutually must generate the certificate for the authentication server.
Each BlackBerry device stores a list of explicitly trusted certificate authority certificates. BlackBerry devices that use PEAP authentication require the root certificate for the certificate authority that issued the certificate.

To distribute the root certificate to BlackBerry devices, you can use the certificate synchronization tool in the BlackBerry® Desktop Manager. You must configure a Wi-Fi profile to provide the user name and password for authentication.

For more information about how the BlackBerry® Enterprise Solution supports PEAP authentication, see the *BlackBerry Enterprise Server Security Technical Overview*.

**Configure PEAP authentication data for BlackBerry devices using a Wi-Fi profile**

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **Policy > Wi-Fi configuration**.
2. Click **Manage Wi-Fi profiles**.
3. Click the name of the Wi-Fi® profile that you want to configure.
4. Click **Edit profile**.
5. On the **Wi-Fi profile settings** tab, perform the following actions:
   • In the **Wi-Fi User Name** field, type the user name for PEAP authentication.
   • In the **Wi-Fi User Password** field, type the password for PEAP authentication.
6. If necessary, on the **Wi-Fi profile settings** tab, configure the following configuration settings:
   • Wi-Fi Link Security
   • Wi-Fi Hard Token Required
   • Wi-Fi Server Subject
   • Wi-Fi Server SAN
   • Wi-Fi Disable Server Certificate Validation
7. Click **Save All**.

**After you finish:**
- Resend the IT policy that you assign to the user accounts to BlackBerry devices.
- Distribute the certificates.

**Related topics**
- Creating and configuring Wi-Fi profiles, 155

**Prerequisites: Distributing a certificate using the BlackBerry Desktop Manager**

- Using a public or private certificate authority, obtain or generate a digital certificate for the authentication server. The root.der certificate file is stored in the location where the certificate was created. For example, the authentication server stores a self-signed certificate locally.
• Configure each wireless access point as a client of the authentication server. You must use the same authentication version on clients and servers. For more information, see the documentation for the access points.
• Use the certificate management features of Microsoft® Active Directory® to download the root certificate from the certificate authority server to the computer.

Distribute a certificate using the BlackBerry Desktop Manager

If a BlackBerry® device requires the root certificate for the certificate authority, a client certificate, or both, you can distribute the certificates using BlackBerry® Desktop Manager. The BlackBerry device can add the certificates to the list of explicitly trusted certificate authority certificates or the list of client certificates.

1. On the user’s computer, right-click the certificate. Click Install certificate.
2. Click Next.
3. Click Place all certificates in the following store.
4. Click Browse.
5. Perform one of the following actions:
   • If you are distributing a root certificate, click Trusted Root Certification Authorities.
   • If you are distributing a client certificate, click Personal
6. Click OK.
7. Click Finish.
8. In the Security Warning dialog box, click Yes.
9. Connect the BlackBerry device to the BlackBerry Desktop Manager.
10. In the BlackBerry Desktop Manager, select the Certificate Synch tool.
11. Type a password that you can use as the keystore password.
12. Perform one of the following actions:
   • If you are distributing a root certificate, on the Root Certificates tab, select the certificate that you add to the certificate list on the BlackBerry device.
   • If you are distributing a client certificate, on the Personal tab, select the certificate that you want to add to the certificate list on the BlackBerry device.

Users cannot find the certificate synchronization tool in the BlackBerry Desktop Manager

Possible cause
The certificate synchronization tool was not installed when the user installed the BlackBerry® Desktop Manager.

Possible solution
Instruct the user to re-install the BlackBerry Desktop Manager using the custom installation option. During the custom installation process, the user can install the certificate synchronization tool.
Configure PEAP configuration settings in the Wi-Fi profile on a BlackBerry device

If you do not configure the PEAP configuration settings using the BlackBerry® Administration Service, instruct users to configure the settings in the Wi-Fi® profile on the BlackBerry device.

1. On the BlackBerry device, in the device options, click Wi-Fi Connections.
2. Click the Wi-Fi profile that you want to configure.
3. Click Edit.
4. In the Security Type list, select PEAP.
5. Type the user name and password for the messaging server.
6. In the CA certificate list, click the certificate for the authentication server.
7. Select the Inner link security type.
8. If your organization does not use EAP-MS-CHAPv2, if necessary, in the Token list, select the token type.
9. If necessary, in the Server subject field, type the server name in the server certificate, in URL format (for example, server1.domain.com or server1.domain.net). If you leave the field blank, the BlackBerry device skips over it during server authentication.
10. If necessary, in the Server SAN field, type the alternative name for the server, in URL format (for example, server1.domain.com or server1.domain.net). If you leave the field blank, the BlackBerry device skips over it during server authentication.
11. If your organization uses dynamic IP addresses, verify that the Automatically obtain IP address and DNS option is selected.
12. Verify that the Allow inter-access point handover option is selected.
13. If necessary, select the Prompt before connection check box. If you do not select the check box, the BlackBerry device connects to an available wireless access point automatically.
14. If necessary, select the Notify on authentication failure check box.
15. If necessary, select the VPN profile.

Configuring EAP-TLS authentication

If your organization implements EAP-TLS authentication, Wi-Fi® enabled BlackBerry® devices must authenticate to an authentication server so that they can connect to the enterprise Wi-Fi network.

EAP-TLS authentication requires that BlackBerry devices trust the authentication server certificate and use a client-side certificate as the supplicant credentials. To trust the authentication server certificate, BlackBerry devices must trust the certificate authority that issued the certificate. A certificate authority that the BlackBerry devices and the authentication server trust mutually must generate the certificate for the authentication server and the certificate for each BlackBerry device.

BlackBerry devices that use EAP-TLS authentication require a client certificate and the root certificate for the certificate authority server that created the certificate for the authentication server. You can obtain and install both certificates using the same distribution method.
To distribute the certificates to BlackBerry devices, you can use the certificate synchronization tool in the BlackBerry® Desktop Manager, or you can enroll the certificate over the wireless network. You must configure a Wi-Fi profile to provide the user name and password for authentication.

For more information about how the BlackBerry® Enterprise Solution supports EAP-TLS authentication, see the BlackBerry Enterprise Server Security Technical Overview.

**Configure EAP-TLS authentication data for BlackBerry devices using a Wi-Fi profile**

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **Policy > Wi-Fi configuration**.
2. Click **Manage Wi-Fi profiles**.
3. Click the name of the Wi-Fi® profile that you want to change.
4. Click **Edit profile**.
5. On the **Wi-Fi profile settings** tab, perform the following actions:
   • In the **Wi-Fi User Name** field, type the user name for EAP-TLS authentication.
   • In the **Wi-Fi User Password** field, type the password for EAP-TLS authentication.
6. If required, configure the following configuration settings:
   • Wi-Fi Link Security
   • Wi-Fi Hard Token Required
   • Wi-Fi Server Subject
   • Wi-Fi Server SAN
   • Wi-Fi Disable Server Certificate Validation
7. Click **Save All**.

**After you finish:**
• Resend the IT policy that you assign to the user accounts to Wi-Fi enabled BlackBerry devices.
• Distribute the certificates.

**Related topics**

Creating and configuring Wi-Fi profiles, 155

**Configure EAP-TLS configuration settings in the Wi-Fi profile on a BlackBerry device**

If you do not configure the EAP-TLS configuration settings using the BlackBerry® Administration Service, instruct the users to configure the settings in the Wi-Fi® profile on the Wi-Fi enabled BlackBerry device.

1. On the BlackBerry device, in the device options, click **Wi-Fi Connections**.
2. Click the Wi-Fi profile that you want to change.
3. Click **Edit**.
4. If a warning about a VPN profile appears, click **OK**. EAP-TLS does not require a VPN profile.
5. In the **Security Type** list, select **EAP-TLS**.
6. Type the user name and password for the messaging server.
7. In the **CA certificate** list, click the root certificate for the certificate authority that created the authentication server certificate.
8. In the **Client certificate** list, click the user certificate.
9. If necessary, in the **Server subject** field, type the server name in the server certificate, in URL format (for example, server1.domain.com or server1.domain.net). If you leave the field blank, the BlackBerry device skips over it during server authentication.
10. If necessary, in the **Server SAN** field, type the alternative name for the server, in URL format (for example, server1.domain.com or server1.domain.net). If you leave the field blank, the BlackBerry device skips over it during server authentication.
11. If your organization uses dynamic IP addresses, verify that the **Automatically obtain IP address and DNS** option is selected.
12. Verify that the **Allow inter-access point handover** option is selected.
13. If necessary, select the **Prompt before connection** check box. If you do not select the check box, the BlackBerry device connects to an available wireless access point automatically.
14. If necessary, select the **Notify on authentication failure** check box.

**Configuring EAP-TTLS authentication**

If your organization implements EAP-TTLS authentication, Wi-Fi® enabled BlackBerry® devices must authenticate to an authentication server so that they can connect to the enterprise Wi-Fi network.

EAP-TTLS authentication requires that BlackBerry devices trust the authentication server certificate. To trust the authentication server certificate, BlackBerry devices must trust the certificate authority that issued the certificate. A certificate authority that the BlackBerry devices and the authentication server trust mutually must generate the authentication server certificate.

Each BlackBerry device stores a list of explicitly trusted certificate authority certificates. BlackBerry devices that use EAP-TTLS authentication require the root certificate for the certificate authority that created the authentication server certificate.

To distribute the root certificate to BlackBerry devices, you can use the certificate synchronization tool in BlackBerry® Desktop Manager or you can enroll the certificate over the wireless network.

For more information about how the BlackBerry® Enterprise Solution supports EAP-TTLS authentication, see the *BlackBerry Enterprise Server Security Technical Overview*. 
Configure EAP-TTLS authentication data for BlackBerry devices using a Wi-Fi profile

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand Policy > Wi-Fi configuration.
2. Click Manage Wi-Fi profiles.
3. Click the name of the Wi-Fi® profile that you want to change.
4. Click Edit profile.
5. On the Wi-Fi profile settings tab, perform the following actions:
   • In the Wi-Fi User Name field, type the user name for EAP-TTLS authentication.
   • In the Wi-Fi User Password field, type the password for EAP-TTLS authentication.
6. If required, configure the following configuration settings:
   • Wi-Fi Link Security
   • Wi-Fi Hard Token Required
   • Wi-Fi Server Subject
   • Wi-Fi Server SAN
   • Wi-Fi Disable Server Certificate Validation
7. Click Save All.

After you finish:
• Resend the IT policy that you assign to the user accounts to Wi-Fi enabled BlackBerry devices.
• Distribute the certificates.

Configure EAP-TTLS configuration settings in the Wi-Fi profile on a BlackBerry device

If you do not configure the EAP-TTLS configuration settings using the BlackBerry® Administration Service, instruct a user to configure the settings in the Wi-Fi® profile on the Wi-Fi enabled BlackBerry device.
1. On the BlackBerry device, in the device options, click Wi-Fi Connections.
2. Click the Wi-Fi profile that you want to change.
3. Click Edit.
4. In the Security Type list, select EAP-TTLS.
5. Type the user name and password for the messaging server.
6. In the CA certificate list, click the root certificate for the certificate authority that created the authentication server certificate.
7. In the Inner link security type list, select EAP-MS-CHAPv2.
8. If necessary, in the **Server subject** field, type the server name in the server certificate, in URL format (for example, server1.domain.com or server1.domain.net). If you leave the field blank, the BlackBerry device skips over it during server authentication.

9. If necessary, in the **Server SAN** field, type the alternative name for the server, in URL format (for example, server1.domain.com or server1.domain.net). If you leave the field blank, the BlackBerry device skips over it during server authentication.

10. If your organization use dynamic IP addresses, verify that the **Automatically obtain IP address and DNS** option is selected.

11. Verify that the **Allow inter-access point handover** option is selected.

12. If necessary, select the **Prompt before connection** check box. If you do not select the check box, the BlackBerry device connects to an available wireless access point automatically.

13. Verify that the **Allow inter-access point handover** option is selected.

14. If necessary, select the **Notify on authentication failure check box.**

### Configuring EAP-FAST authentication

EAP-FAST is an authentication method that was developed by Cisco® Systems. Similar to PEAP authentication, EAP-FAST authentication encrypts EAP transactions within a TLS tunnel. Although PEAP uses a server-side digital certificate to configure the TLS tunnel, EAP-FAST uses a .pac file.

The .pac file that the BlackBerry® devices and the authentication server share contains secret keys that are unique to the BlackBerry devices. The EAP-FAST master key on the authentication server generates the .pac file. EAP-FAST uses the .pac file to open the TLS tunnel and authenticates the user credentials through the TLS tunnel.

#### Configure EAP-FAST authentication

1. Distribute the .pac file to the wireless client over a network connection that is designed to be secure using automatic PAC provisioning.

2. Configure each wireless access point to connect to the access control server and a DHCP server.

3. Verify that the DHCP server can provide the following information to the wireless client:
   - IP address or network
   - default gateway
   - IP address of the DNS server

4. Configure the access control server.

#### After you finish:

- For information about the automatic provisioning process, see the documentation for your organization’s authentication server.
- For information about configuring wireless access points, see the documentation for the access points.
- For information about configuring the access control server, see the documentation for the access control server.

### Related topics

- **Prerequisites:** Distributing a certificate using the BlackBerry Desktop Manager, 168
Send EAP-FAST authentication data to a BlackBerry device using a Wi-Fi profile

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand Policy > Wi-Fi configuration.
2. Click Manage Wi-Fi profiles.
3. Click the name of the Wi-Fi® profile that you want to configure.
4. Click Edit profile.
5. In the Wi-Fi profile settings tab, perform the following actions:
   - In the Wi-Fi User Name field, type the user name for PEAP authentication.
   - In the Wi-Fi User Password field, type the password for PEAP authentication.
6. If required, configure the following configuration settings:
   - Wi-Fi Link Security
   - Wi-Fi Inner Authentication Mode
   - Wi-Fi Hard Token Required
   - Wi-Fi Server Subject
   - Wi-Fi Server SAN
   - Wi-Fi EAP-FAST Provisioning method
   - Wi-Fi Disable Server Certificate Validation
7. Click Save All.

After you finish:
- Resend the IT policy that you assign to the user accounts to BlackBerry devices.
- Distribute the certificates.

Configure EAP-FAST configuration settings in the Wi-Fi profile on BlackBerry devices

If you do not configure the EAP-FAST configuration settings using the BlackBerry® Administration Service, instruct users to configure the settings in the Wi-Fi® profile on the Wi-Fi enabled BlackBerry device.
1. On the BlackBerry device, in the device options, click Wi-Fi Connections.
2. Click the Wi-Fi profile that you want to change.
3. Click Edit.
4. In the Security Type list, select EAP-FAST.
5. Type the user name and password for the messaging server.
6. In the Inner link security list, click the security type.
7. If necessary, in the Token list, select the token type.
8. If your organization uses dynamic IP addresses, verify that the **Automatically obtain IP address and DNS** option is selected.

9. If necessary, select the **Prompt before connection** check box. If you do not select the check box, the BlackBerry device connects to an available wireless access point automatically.

10. If necessary, select the **Notify on authentication failure** check box.
Configuring software tokens for BlackBerry devices

The BlackBerry® Enterprise Server Express is designed to work with the RSA® Authentication Manager to provide software token support for use with layer 2 and layer 3 Wi-Fi® authentication on Wi-Fi enabled BlackBerry devices.

When you configure a software token for users, BlackBerry devices are designed to use the passcode to authenticate the users to the Wi-Fi network and VPNs automatically using the PEAPv1, EAP-GTC, and EAP-TTLS or EAP-GTC authentication methods.

You can configure multiple software tokens for each user. For example, you can configure one software token that a user can use with Wi-Fi authentication and a second software token that a user can use with VPN authentication. When users try to open a Wi-Fi or VPN connection that requires two-factor authentication on the BlackBerry devices, the BlackBerry devices prompt the users to type the software token PIN and submit the current tokencode for the connection type to create the passcode for two-factor authentication.

For more information about how the BlackBerry Enterprise Server Express supports software tokens, see the BlackBerry Enterprise Solution Security Technical Overview.

Prerequisites: Configuring BlackBerry devices for RSA authentication

To perform tasks in the RSA® Authentication Manager, see the RSA Authentication Manager documentation, and the documentation for the RSA SecurID® token.

- In the RSA Authentication Manager, configure the following policies for the PINs of the software tokens in your organization's environment:
  - whether a PIN is required for authentication
  - whether a PIN is defined by the user or generated by the RSA Authentication Manager
  - whether a PIN is alphanumeric or numeric only
  - whether a PIN has a fixed length or a variable length, with a minimum of four characters and a maximum of eight characters
- Import the token seed file (also known as the *.sdtid file) that contains the UID for each software token into the RSA Authentication Manager Database.
- In the RSA Authentication Manager Database, create a user record for each software token holder.
- In the RSA Authentication Manager Administration application, configure the following parameters for the software token seed file:
  - serial number
  - cryptographic algorithm
  - user account that you can assign the software token to
  - password to protect the software token seed file
- Communicate the password to the user.
Configure BlackBerry devices for RSA authentication

Software tokens use the UID and current time to authenticate the Wi-Fi® enabled BlackBerry® devices to the RSA® Authentication Manager. To permit BlackBerry devices to authenticate to the RSA Authentication Manager, you must synchronize the time and date on BlackBerry devices with the time and date on the computer that hosts the RSA Authentication Manager, even though the RSA Authentication Manager is designed to accommodate time differences of up to three minutes.

Instruct users to use one of the following methods to synchronize the date, time, and time zone settings on the BlackBerry devices with the RSA Authentication Manager:

- Adjust the time on BlackBerry devices using the Date/Time option on the BlackBerry devices manually.
- Use the BlackBerry® Desktop Manager to synchronize the date and time on the BlackBerry devices with the date and time on the users' computers.

After you finish:
- Assign the Wi-Fi profile to the user accounts.
- Resend the IT policy to BlackBerry devices.

Configure RSA authentication over a Wi-Fi network using a software token

You must add the serial number of the software token that the Wi-Fi® enabled BlackBerry® devices can use to a Wi-Fi profile so that RSA® authentication can occur over Wi-Fi connections.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand Policy > Wi-Fi configuration.
2. Click Manage Wi-Fi profiles.
3. Click the name of the Wi-Fi profile that you want to change.
4. Click Edit profile.
5. On the Wi-Fi profile settings tab, in the Wi-Fi Token Serial Number field, type the serial number of the software token.
6. Click Save All.

After you finish:
- Assign the Wi-Fi profile to the user accounts.
- Resend the IT policy that you assign to the user accounts to BlackBerry devices.
Configure RSA authentication over a VPN network using a software token

You must add the serial number of the software token that the Wi-Fi® enabled BlackBerry® device can use to a VPN profile so that RSA® authentication can occur over VPN connections.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand Policy > Wi-Fi configuration.
2. Click Manage VPN profiles.
3. Click the name of the VPN profile that you want to change.
4. Click Edit profile.
5. On the VPN profile settings tab, in the VPN Token Serial Number field, type the serial number of the software token.
6. Click Save All.

After you finish:
- Assign the VPN profile to the user accounts.
- Resend the IT policy that you assign to the user accounts to BlackBerry devices.

Assign software tokens to a user account

You must assign the software tokens that BlackBerry® device users can use to authenticate to a Wi-Fi® network or VPN network to the user accounts. Depending on the number of software token records that are available to you, you can assign up to three software tokens to each user account.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for a user account.
4. Click the display name for the user account.
5. Click Edit user.
6. On the Software tokens tab, type the serial number of the software token.
7. To import the software token seed file for the user account, perform the following actions:
   a. Click Browse.
   b. Navigate to the software token seed file for the user account.
   c. Click Open.
8. If you configured a password in the RSA® Authentication Manager so that you can encrypt the .sdtid file, type and confirm the password.
9. In the Timeout (minutes) field, type the length of time, in minutes, that the Wi-Fi enabled BlackBerry device takes to cache the PIN.
10. Click the Add icon.
11. Click **Save all**.
Changing the security settings of the BlackBerry Administration Service and BlackBerry Web Desktop Manager

Import a new SSL certificate for the BlackBerry Administration Service and BlackBerry Web Desktop Manager

When you install the BlackBerry® Administration Service and BlackBerry® Web Desktop Manager, the setup application generates an SSL certificate to protect the HTTPS connection. You can import a self-signed SSL certificate or a trusted certificate that a certification authority signs after the installation process completes. If you configure a BlackBerry Administration Service pool, you must generate an SSL certificate that uses the name of the BlackBerry Administration Service pool.

For more information about using the keytool, visit java.sun.com/javase/6/docs/technotes/tools/windows/keytool.html.

Before you begin: If you want to use a trusted certificate, copy the root certificate of the certification authority to the computer that hosts the BlackBerry Administration Service.

1. On a computer that hosts a BlackBerry Administration Service instance, in <drive>:\Program Files\Research In Motion\BlackBerry Enterprise Server\BAS\bin\web.keystore, back up the web.keystore file.
2. Using the keytool in <drive>:\Program Files\Java\<JRE_version>\bin, delete the default SSL certificate that the setup application generated (for example, keytool -delete -alias httpssl -keystore "<drive>:\Program Files\Research In Motion\BlackBerry Enterprise Server\BAS\bin\web.keystore").
3. Using the keytool and the SSL password that you specified when you installed the BlackBerry Administration Service, generate a new entry and private key in the web.keystore file (for example, keytool -genkey -alias httpssl -keypass <password> -keystore "<drive>:\Program Files\Research In Motion\BlackBerry Enterprise Server\BAS\bin\web.keystore"). When the keytool prompts you for the first name and last name, type the pool name of the BlackBerry Administration Service. You can find the pool name in the BlackBerry Configuration Panel.
4. If you want to use a trusted certificate, using the keytool, import the root certificate of the certification authority (for example, keytool -import -alias <ca_alias_name> -file <root_certificate_file>.cer -trustcacerts -keystore "<drive>:\Program Files\Research In Motion\BlackBerry Enterprise Server\BAS\bin\web.keystore").
5. Using the keytool, generate a certificate signing request (for example, keytool -certreq -alias https -file <certreq_filename>.csr -keystore "<drive>:\Program Files\Research In Motion\BlackBerry Enterprise Server\BAS\bin\web.keystore").
6. Send the certificate signing request to a certification authority so that the certification authority can create the certificate.
7. When the certification authority returns the certificate, copy it into a text file and save it with a .cer extension.
8. Using the keytool, import the certificate to the web.keystore file (for example, keytool -import -alias https -keystore "<drive>:\Program Files\Research In Motion\Blackberry Enterprise Server\BAS\bin\web.keystore" -file "<certificate_filename>.cer").

9. In the Windows® Services, restart the BlackBerry Administration Service services.

10. Complete the following actions on each computer that hosts a BlackBerry Administration Service instance:
   a. Copy the web.keystore file in the <drive>:\Program Files\Research In Motion\Blackberry Enterprise Server\BAS\bin folder from the BlackBerry Administration Service that you updated to the other BlackBerry Administration Service instances.
   b. In the Windows® registry, copy the WebKeyStorePass value in the HKEY_CURRENT_USER\Software \Research In Motion\Blackberry Enterprise Server\Administration Service\Key Store from the BlackBerry Administration Service that you updated to the other BlackBerry Administration Service instances.
   c. In the Windows Services, restart the BlackBerry Administration Service services.

Configuring Microsoft Active Directory authentication in an environment that includes a resource forest

If your organization's environment includes a resource forest that is dedicated to running Microsoft® Exchange, you can configure the BlackBerry® Administration Service to use Microsoft® Active Directory® authentication to log in BlackBerry device users that have user accounts that are located in trusted account forests. The BlackBerry Administration Service can use Microsoft Active Directory authentication to log users into the BlackBerry Administration Service console and the BlackBerry® Web Desktop Manager.

You must install the BlackBerry® Enterprise Server Express in the resource forest if a resource forest exists in your organization's environment. In the resource forest, you create a mailbox for each user account and associate the mailboxes with the user accounts that are located in the account forests. When you associate the mailboxes in the resource forest with the user accounts in the account forests, the user accounts obtain full access to the mailboxes and the user accounts in the account forests are connected to the Microsoft Exchange server.

To authenticate users who log in to the BlackBerry Administration Service or BlackBerry Web Desktop Manager, the BlackBerry Administration Service must read the user information that is stored in the global catalog servers that are part of the resource forest. To configure the BlackBerry Administration Service to authenticate user accounts that are associated with mailboxes in the resource forest, you must create a Microsoft Active Directory account for the BlackBerry Administration Service that is located in a Windows® domain that is part of the resource forest. During the BlackBerry Enterprise Server Express installation process, you provide the Windows domain, user name, and password for the Microsoft Active Directory account, and, if required, the names of the global catalog servers that the BlackBerry Administration Service can use. You can change the Windows domain, user name, and password for the Microsoft Active Directory account and global catalog servers after the installation process completes.

For more information, visit technet.microsoft.com to read Using a Dedicated Exchange forest.

Change the information for Microsoft Active Directory authentication

Before you begin:
• Create a Microsoft® Active Directory® account for the BlackBerry® Administration Service that is located in a Windows® domain that is a part of the resource forest. When you create the account, specify a password that meets the security requirements of your organization and configure the following password settings:
  • the user is not required to change the password at next login
  • the user's password never expires

1. In the BlackBerry Administration Service, expand BlackBerry solution topology > BlackBerry Domain > Component view.
2. Click BlackBerry Administration Service.
4. In the User name field, type the name for the Microsoft Active Directory account that has permission to access the user containers and read the user objects that are stored in the global catalog servers that are located in the resource forest.
5. In the Password field and Confirm Password field, type the password for the Microsoft Active Directory account.
6. In the User domain field, type the name of the Windows domain that is a part of the resource forest.
7. In the Global Catalog search base field, perform one of the following actions:
  • To permit the BlackBerry Administration Service to search the global catalog, leave the Global Catalog search base field blank.
  • To control which user accounts the BlackBerry Administration Service can authenticate with, type the distinguished name of the user container (for example, OU=sales,DC=example,DC=com).
8. If you want the BlackBerry Administration Service to find all of the global catalog servers in the resource forest automatically, in the Global Catalog server discovery drop-down list, click Automatic.
9. If you want to configure which global catalog servers the BlackBerry Administration Service can access, in the Global Catalog server discovery drop-down list, click Select server from the list below and perform the following actions:
   a. In the Global Catalog server section, type the FQDN of the global catalog server that you want the BlackBerry Administration Service to access (for example, globalcatalog01.example.com). You must type the FQDN of a global catalog server that is located in the Windows domain that the Microsoft Active Directory account located in.
   b. Click the Add icon.
   c. Perform this step for each global catalog server that you want the BlackBerry Administration Service to access.
10. Click Save All.

The BlackBerry Administration Service validates the information for Microsoft Active Directory authentication. If the information is valid, the BlackBerry Administration Service implements the changes immediately and you do not need to restart the BlackBerry Administration Service services. If the information is invalid, the BlackBerry Administration Service prompts you to specify correct information.
Configuring single sign-on authentication for the BlackBerry Administration Service and BlackBerry Web Desktop Manager

If you configure the BlackBerry® Administration Service to support Microsoft® Active Directory® authentication, you can turn on single sign-on authentication. Single sign-on authentication permits you to access the BlackBerry Administration Service and BlackBerry device users to access the BlackBerry Web Desktop Manager without requiring that you or the users type a Microsoft Active Directory user name and password. By default, if you log in to the BlackBerry Administration Service or users log in to the BlackBerry Web Desktop Manager using Microsoft Active Directory authentication, the browser prompts you or the users to type a Microsoft Active Directory user name and password. If you turn on single sign-on authentication, and you log in to a computer using a Microsoft Active Directory account, you can bypass the login screen and access the BlackBerry Administration Service and BlackBerry Web Desktop Manager directly.

Before you turn on single sign-on, you must configure constrained delegation for the Microsoft Active Directory account for the BlackBerry Administration Service.

Configure constrained delegation for the Microsoft Active Directory account to support single sign-on authentication

1. Use the Windows Server® ADSI Edit tool to add the following SPNs for the BlackBerry® Administration Service pool to the Microsoft® Active Directory® account:
   - HTTP/<BAS_pool_FQDN> (for example, HTTP/BASconsole104.example.com)
   - BASPLUGIN111/<BAS_pool_FQDN> (for example, BASPLUGIN111/BASconsole104.example.com)

2. If you create separate pools of BlackBerry Administration Service instances and BlackBerry Web Desktop Manager instances in the BlackBerry Administration Service pool, add the HTTP/<BAS_pool_FQDN> SPN for each pool to the Microsoft Active Directory account.

3. Configure the Microsoft Active Directory account for constrained delegation using the following settings:
   - trust this user for delegation to specific services only
   - use Kerberos™ only

4. In the Microsoft Active Directory account properties, on the Delegation tab, add BASPLUGIN111/<BAS_pool_FQDN> to the list of services.

**After you finish:** For more information about configuring constrained delegation for the Microsoft Active Directory account so you can access the BlackBerry Administration Service, visit [www.blackberry.com/btsc](http://www.blackberry.com/btsc) to read article KB22717.

Turn on single sign-on authentication for the BlackBerry Administration Service

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution Topology > BlackBerry Domain > Component view.
2. Click BlackBerry Administration Service.

4. In the Login Domain section, in the Single sign-on authentication for BlackBerry Administration Service turned on drop-down list, click Yes.

5. To configure the Microsoft® Active Directory® account for each forest, in the Account forest name section, type the user domain name, user name, and password for the Microsoft Active Directory account.

6. Click Save all.

7. In the Windows® Services, restart all of the BlackBerry® Enterprise Server Express services.

8. Instruct all administrators and device users to add the web addresses for the BlackBerry Administration Service and BlackBerry® Web Desktop Manager to the list of web sites in the local intranet zone and install the certificate for the BlackBerry Administration Service or BlackBerry Web Desktop Manager in the certificate store of their computers.

**BlackBerry Administration Service web addresses and BlackBerry Web Desktop Manager web addresses that support BlackBerry Administration Service single sign-on**

If you configure BlackBerry® Administration Service single sign-on, you must instruct administrators and BlackBerry® Web Desktop Manager users to access the BlackBerry Administration Service console and BlackBerry Web Desktop Manager using the following web addresses:

- `https://<BAS_pool_FQDN>/webconsole/login`
- `https://<BAS_pool_FQDN>/webdesktop/login`

Single-sign authentication takes precedence over other authentication methods that permit administrators and users to log in to the BlackBerry Administration Service console or BlackBerry Web Desktop Manager. If the security policies in your organization require that administrators or users use another authentication method, you must instruct administrators or users to access the BlackBerry Administration Service console or BlackBerry Web Desktop Manager using the following web addresses:

- `https://<BAS_pool_FQDN>/webconsole/app`
- `https://<BAS_pool_FQDN>/webdesktop/app`

**Changing password settings for BlackBerry Administration Service authentication**

If you use BlackBerry® Administration Service authentication in your organization's environment, you can change the minimum password length and the date when passwords expire to meet the requirements of your organization's security policies. By default, the minimum password length is four characters and a password expires after 365 days.

If you change the minimum password length, administrators that use passwords that do not meet the new minimum length are not required to change the passwords until the passwords expire.
Change password settings for BlackBerry Administration Service authentication

1. In the BlackBerry® Administration Service, on the Servers and components menu, click BlackBerry solution topology > BlackBerry Domain > Component view.
2. Click BlackBerry Administration Service.
3. Click Edit component.
4. In the Security settings section, change the minimum password length and the date when the password expires.
5. Click Save all.

Regenerate the system credentials for the BlackBerry Administration Service

The setup application generates the system credentials for the BlackBerry® Administration Service during the installation process. The BlackBerry Administration Service uses the system credentials when it communicates with other BlackBerry® Enterprise Server Express components. If you suspect that the system credentials are compromised, you can regenerate them on the database server.

Before you begin: Verify that you have database owner permissions for the BlackBerry Configuration Database.

1. On all of the computers that host BlackBerry Administration Service instances, in the Windows® Services, stop the BlackBerry Administration Service services.
2. On the database server, on the BlackBerry Configuration Database, run the following SQL statement: DELETE from BASTraits WHERE PlugInId=8 AND TraitId=0.
3. On a computer that hosts a BlackBerry Administration Service instance, in the Windows Services, start the BlackBerry Administration Service services.
4. On the computers that host the remaining BlackBerry Administration Service instances, in the Windows Services, start the BlackBerry Administration Service services.

Protecting and redistributing devices

Preparing a device for redistribution to a new user

You can prepare a BlackBerry® device for redistribution to a new BlackBerry device user by performing one of the following actions:

- use the security options on the device to permanently delete all user data
- connect the device to the BlackBerry Administration Service and delete all user data from the device permanently
- connect the device to the BlackBerry Administration Service and delete all user data permanently and remove the BlackBerry® Device Software

For more information about using the security options on the device to permanently delete all user data, see the user guide for the device.

After the new user receives the device, you must activate it.

Related topics
Assigning BlackBerry devices to user accounts, 68

Use the BlackBerry Administration Service to delete user data and assign the device to a new user

1. Connect the BlackBerry® device to the computer that you used to log in to the BlackBerry Administration Service.
2. If you receive a prompt, type the device password.
3. In the BlackBerry Administration Service, on the Devices menu, click Attached devices > Manage current device.
4. Click Remove user data from current device.
5. Click Yes – Remove user data.
6. Click Assign current device.
7. Search for the new user account that you want to assign the device to.
8. Select the user name.
9. Click Associate user.
   After you assign the user account to the device, the activation process begins automatically.
11. Install the applications that the user requires on the device.

Use the BlackBerry Administration Service to delete user data and remove the BlackBerry Device Software before assigning the device to a new user

If you perform this task, you are deleting user data permanently and removing the BlackBerry® Device Software and BlackBerry device operating system.

1. Connect the BlackBerry device to the computer that you used to log in to the BlackBerry Administration Service.
2. If you receive a prompt, type the device password.
3. In the BlackBerry Administration Service, on the **Devices** menu, click **Attached devices > Manage current device**.
4. Click **Delete all device data and disable device**.
5. Click **Yes – Delete all device data and disable device**.
6. Reinstall the BlackBerry Device Software using the application loader tool in the BlackBerry Administration Service, BlackBerry® Desktop Manager, or BlackBerry® Web Desktop Manager.
7. Activate the device.

**After you finish:** For more information about installing the BlackBerry Device Software, see the *BlackBerry Device Software Update Guide*.

### Deleting only work data from a device

To help secure your organization's data on a personal BlackBerry® device, you can permit your organization to delete work data from a device when a user no longer works at your organization. You can use the BlackBerry Administration Service to require that a personal device remove only work data when the device receives the Delete only the organization data and remove device IT administrative command over the wireless network. All personal data remains on the device. A BlackBerry device user cannot use the device or make emergency calls while the device deletes the work data.

The device permanently deletes the following work data:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>email messages</td>
<td>• email messages that are sent to the user's work email account and the email messages that the user sends from the work email account</td>
</tr>
<tr>
<td></td>
<td>• draft email messages that the user creates using their work email account</td>
</tr>
<tr>
<td>attachments</td>
<td>attachments that are sent to the user's work email account and the attachments that the user sends from the work email account</td>
</tr>
<tr>
<td>calendar entries</td>
<td>calendar entries that the user creates using their work calendar</td>
</tr>
<tr>
<td>contacts</td>
<td>contacts that the BlackBerry® Enterprise Server Express synchronizes with the user's work email account</td>
</tr>
<tr>
<td>memos</td>
<td>all memos</td>
</tr>
<tr>
<td>tasks</td>
<td>all tasks</td>
</tr>
<tr>
<td>call history</td>
<td>although the device defines phone data for personal use, the call history entries are deleted when you delete work data</td>
</tr>
<tr>
<td>call logs</td>
<td>although the device classifies phone data as personal data, the call log files are deleted when you delete work data</td>
</tr>
<tr>
<td>Item</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>the BlackBerry® Browser cache</td>
<td>although the device specifies the BlackBerry Browser for personal use, the BlackBerry Browser cache is deleted when you delete work data</td>

## Delete only work data from a device

**Before you begin:** If you want to remove your organization’s applications from the BlackBerry® device, create a software configuration that includes the applications and set the disposition of all work applications to Disallowed in the software configuration. Assign the software configuration to the user account to send it to the device. For more information, see the *BlackBerry Enterprise Server Express Administration Guide*.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. In the search results, click the PIN for the user account.
5. In the **Device activation** list, click **Delete only the organization data and remove device**.
6. Optionally, in the **Removing users and devices** section, in the **Actions** drop-down list, perform one of the following actions:
   - To delete a user account from the BlackBerry® Enterprise Server Express but retain the BlackBerry Enterprise Server Express information in the user’s mailbox, click **Delete the user**.
   - In a Microsoft® Exchange environment, to delete a user account from the BlackBerry Enterprise Server Express and remove the BlackBerry Enterprise Server Express information from the user’s mailbox, click **Delete the user and remove BlackBerry information from the user's messaging system**.
   - In an IBM® Lotus® Domino® environment, to delete a user account from the BlackBerry Enterprise Server Express and remove the BlackBerry Enterprise Server Express information from the user's mailbox, click **Delete the user and remove the profile document and the state database**.
   - To disable a user account from the BlackBerry Enterprise Server Express but retain the BlackBerry Enterprise Server Express information in the user’s mailbox, click **Disable as BlackBerry user**.
• In a Microsoft Exchange environment, to disable a user account from the BlackBerry Enterprise Server Express and remove the BlackBerry Enterprise Server Express information from the user's mailbox, click **Disable the user and remove BlackBerry information from the user's messaging system**.

• In a Lotus Domino environment, to disable a user account from the BlackBerry Enterprise Server Express and remove the BlackBerry Enterprise Server Express information from the user's mailbox, click **Disable the user and remove the profile document and the state database**.

7. Click **Yes - Delete only the organization data and remove device**.

**Using IT administration commands to protect a lost or stolen device**

The BlackBerry® Enterprise Server Express includes IT administration commands that you can send over the wireless network to protect sensitive data on a BlackBerry device. You can use the commands to lock the device, permanently delete work data, permanently delete user information and application data, and return the device settings to the default values.

<table>
<thead>
<tr>
<th>IT administration command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Specify new device password and lock device</td>
<td>This command creates a new password and locks a device over the wireless network. You can communicate the new password to the user verbally when the BlackBerry device user locates the device. When the user unlocks the device, the device prompts the user to accept or reject the new password. You can use this command if the device is lost. If you or a user turned on content protection and a device is running BlackBerry® Device Software 4.3.0 or later, you can use this command. If you or a user turned on two-factor content protection, you cannot use this command.</td>
</tr>
<tr>
<td>Delete only the organization data and remove device</td>
<td>This command permanently deletes all work data that the device stores and removes the device from the BlackBerry Enterprise Server Express. All personal data remains on the device. You can send this command to a personal device when a user no longer works at your organization and you want to delete work data from the device. You can also specify whether you want to delete or disable a user account from the BlackBerry Enterprise Server Express after the device deletes all work data.</td>
</tr>
</tbody>
</table>
| Delete all device data and remove device | This command permanently deletes all user information and application data that the device stores. You can configure the following options when you use this command:  
  • specify a delay, in hours, that must occur before the device starts to delete all the user information and application data |
### IT administration command | Description
--- | ---
| | • require the device to return to its factory default settings when it receives this command
| | • specify whether to permit the user to stop permanently deleting data from the device and making the device unavailable during the delay period

You can send this command to a device that you want to distribute to another user in your organization, or to a device that is lost and that the user might not recover.

You can also specify whether you want to delete or disable a user account from the BlackBerry Enterprise Server Express after the device deletes all user information and application data.

## Protect a stolen device

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. In the search results, click the PIN for the user account.
5. In the **Device activation** list, click **Delete all device data and remove device**.
6. Click **Yes - Delete all device data and remove device**.
7. Optionally, in the **Removing users and devices** section, in the **Actions** drop-down list, perform one of the following actions:
   - To delete a user account from the BlackBerry® Enterprise Server Express but retain the BlackBerry Enterprise Server Express information in the user's mailbox, click **Delete the user**.
   - To delete a user account from the BlackBerry Enterprise Server Express and remove the BlackBerry Enterprise Server Express information from the user’s mailbox, click **Delete the user and remove BlackBerry information from the user's messaging system**.
   - To disable a user account from the BlackBerry Enterprise Server Express but retain the BlackBerry Enterprise Server Express information in the user’s mailbox, click **Disable as BlackBerry user**.
   - To disable a user account from the BlackBerry Enterprise Server Express and remove the BlackBerry Enterprise Server Express information from the user’s mailbox, click **Disable the user and remove BlackBerry information from the user's messaging system**.

**After you finish:**
- Verify that the BlackBerry device received the command.
- Contact your organization's wireless service provider to turn off the service for a device after you send the IT administration command that deletes all of the device data and deactivates the device.
Protect a lost device

If a user misplaces a BlackBerry® device or if a device is stolen, you can protect the data on the device by locking the device or making it unavailable.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. In the search results, click the PIN for the user account.
5. In the **Device activation** section, click **Specify new device password and lock device**.
6. Type and confirm an activation password. For devices that are running BlackBerry® Device Software version 4.1 and earlier, the password must not contain special characters. Some devices do not support special characters and do not unlock when a user types a password that contains special characters.
7. Click **Specify new device password and lock device**.

Protect a lost device that a user might not recover

If a BlackBerry® device is lost but the device user might recover it, you can protect the information on the device by scheduling it to start deleting all user information and application data and to become unavailable after a period of time that you specify. You can also specify whether the user can cancel the scheduled command if the user recovers the device.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. In the search results, click the PIN for the user account.
5. In the **Device activation** section, click **Delete all device data and remove device**.
6. In the **Erase Data Settings** section, perform the following actions:
   • In the **Erase Data Delay (hours)** field, type the number of hours that must elapse before the BlackBerry device starts deleting user information and application data.
   • In the **Allow User Override** drop-down list, click **Yes** to permit the user to cancel the scheduled command on the BlackBerry device if the user recovers it.
7. Optionally, in the **Removing users and devices** section, in the **Actions** drop-down list, perform one of the following actions:
   • To delete a user account from the BlackBerry® Enterprise Server Express but retain the BlackBerry Enterprise Server Express information in the user's mailbox, click **Delete the user**.
   • To delete a user account from the BlackBerry Enterprise Server Express and remove the BlackBerry Enterprise Server Express information from the user's mailbox, click **Delete the user and remove BlackBerry information from the user's messaging system**.
   • To disable a user account from the BlackBerry Enterprise Server Express but retain the BlackBerry Enterprise Server Express information in the user's mailbox, click **Disable as BlackBerry user**.
• To disable a user account from the BlackBerry Enterprise Server Express and remove the BlackBerry Enterprise Server Express information from the user's mailbox, click **Disable the user and remove BlackBerry information from the user's messaging system**.

8. Click **Yes - Delete all device data and remove device**.
Managing administrator accounts

Change the roles for an administrator account

To reflect the changes to an administrator’s responsibilities in your organization, you can add or remove one or more administrative roles for the administrator account.

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for an administrator account.
4. In the search results, click the display name for the administrator account.
5. Click Edit user.
6. On the Roles tab, in the Current roles list, add or remove the appropriate roles.
7. Click Save all.

Delete a role

You can delete a role when you no longer require it in your organization's environment.

Before you begin: Verify that the role is not assigned to any administrator accounts or groups.

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Role.
2. Click Manage roles.
3. In the list of existing roles, click the name of the role that you want to delete.
4. Click Delete role.
5. Click Yes - Delete the role.

Delete an administrator account

You can delete an administrator account when you no longer require it in your organization's environment.

Before you begin: If the administrator is also a BlackBerry® device user, remove the BlackBerry device from the administrator account.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand Administrator User.
2. Click Manage users.
3. Search for an administrator account.
4. In the search results, click the display name for the administrator account.
5. In the Status list, click Delete user.
6. Click Yes - **Delete the user.**
Managing groups and user accounts

Managing groups

You can reduce the time that you spend managing user accounts by creating groups of similar user accounts and assigning shared properties, such as software configurations or IT policies, to the group. Properties that you assign to a group are assigned to all user accounts in the group.

You can assign properties to user accounts and administrator accounts at the individual level, group level, or domain level. The BlackBerry® Administration Service applies properties to user accounts and administrator accounts using the following hierarchy:

- The properties at the individual level override the properties at the group level.
- The properties at the group level override the properties at the domain level.

After you add a user account or administrator account to a group, you can override the properties that you configured for the account at the group level or domain level by changing the properties at the user account level.

If you remove a user account or administrator account from a group, the account name remains in the global users list but it does not appear in the group list.

You can either create user-specific groups and assign roles to those groups or use the default user groups that contain pre-existing roles.

If you are managing a large number of groups (over 3000) using the BlackBerry Administration Service in a single domain, your organization's environment might experience a performance impact.

Using default groups to manage user accounts and administrator accounts

The BlackBerry® Enterprise Server Express installation includes default groups that have preconfigured administrative roles. You can use the default groups in your organization's environment instead of creating specific administrative groups. Each default group consists of a set of preconfigured rules which specify the information that administrators can view and the tasks that they can perform using the BlackBerry Administration Service.

The default groups ensure users without administrative privileges cannot escalate their permissions, for example, junior administrators cannot escalate their roles to senior administrator roles.

<table>
<thead>
<tr>
<th>Default group</th>
<th>Description of the default group</th>
</tr>
</thead>
<tbody>
<tr>
<td>Administrators</td>
<td>This is a preconfigured group for BlackBerry Administration Service administrators. This group has the permissions assigned to the Security role. Administrators in this group are responsible for ensuring all Junior Helpdesk administrators are added to the Junior Helpdesk group.</td>
</tr>
<tr>
<td>Help desk representatives</td>
<td>This is a preconfigured group for help desk administrators. This group has the permissions assigned to the Junior Helpdesk role.</td>
</tr>
</tbody>
</table>
Default group | Description of the default group
--- | ---
Junior Helpdesk administrators in this group can perform basic administrative tasks such as adding users to groups and assigning BlackBerry devices to BlackBerry device users. The Junior Helpdesk role can only add users to the Web Desktop Users group and the Junior Helpdesk group.
BlackBerry® Web Desktop Manager users | This is a preconfigured group for BlackBerry Web Desktop Manager users. BlackBerry Web Desktop Manager users in this group do not have any BlackBerry Administration Service administrative permissions. Users in this group can perform basic administrative tasks on their own user account using the BlackBerry Web Desktop Manager such as setting an activation password or locking their BlackBerry device.

Remove a user account from a group

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **Group**.
2. Click **Manage groups**.
3. Click the group name.
4. In the **Manage users in group membership** list, click **Remove users from group membership**.
5. Search for a user account.
6. Select the check box beside the display name for the user accounts that you want to remove.
7. Click **Remove from group membership**.

Change the properties of a group

After you create a group, specify the properties that you want to apply to all user and administrator accounts in the group. You can copy the properties from one group to another. When you add user accounts or administrator accounts to a group, the group properties apply to the new accounts automatically.

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **Group**.
2. Click **Manage groups**.
3. Click the group name.
4. Click **Edit group**.
5. Switch between the appropriate tabs and make the appropriate changes.
6. Click **Save all**.

Rename a group

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **Group**.
2. Click **Manage groups**.
3. Click the group name.
4. Click **Edit group**.

5. In the **Group information** section, in the **Name** field, type a new name for the group.

6. Click **Save all**.

**Delete a group**

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **Group**.

2. Click **Manage groups**.

3. Click the group name.

4. Click **Delete group**.

5. Click **Yes - Delete the group**.

**Managing user accounts**

You can move user accounts from one user group to another or from one BlackBerry® Enterprise Server Express to another in the BlackBerry Domain. If you move a user account from one BlackBerry Enterprise Server Express to another, the destination BlackBerry Enterprise Server Express sends new service books to the BlackBerry device over the wireless network. If you are moving a user’s mailbox to a different Microsoft® Exchange Server and moving the user account to a different BlackBerry Enterprise Server Express, first move the user’s mailbox to the destination mail server. Do not move the user account until the destination BlackBerry Enterprise Server Express recognizes the new mailbox location.

If you move a user mailbox or change its display name on the messaging server, the BlackBerry Enterprise Server Express is designed to update the user account within 15 minutes of when the change occurs. If you move a hidden mailbox that does not appear in the contact list, you must update the user account that is associated with the BlackBerry Enterprise Server Express manually.

When you delete a user account, you can retain the user account information in the BlackBerry Enterprise Server Express. You can activate the user account again, or the user can continue to use the BlackBerry device as a BlackBerry® Desktop Redirector. When you activate a user account that you retained, the user account will have the same settings it had before you deleted it.

**Move a user account to a different group**

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **User**.

2. Click **Manage users**.

3. Search for a user account.

4. In the search results, click the display name for the user account.

5. Click **Edit user**.

6. On the **Groups** tab, in the **Current groups** list, click the group that you want to remove the user from.

7. Click **Remove**.
8. In the **Available groups** list, click the group that you want to move the user account to.

9. Click **Add**.

10. Click **Save all**.

**Move a user account from one BlackBerry Enterprise Server Express to another**

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for one or more user accounts.
4. In the search results, select one or more user accounts.
5. In the **BlackBerry Enterprise Server status** list, click **Switch BlackBerry user to different BlackBerry Enterprise Server**.
6. In the **Available BlackBerry Enterprise Server instances** list, click the BlackBerry® Enterprise Server Express that you want to move the user accounts to.
7. Click **Next**.
8. A message appears indicating that some of the user accounts might have pending deployment tasks. Perform one of the following actions:
   - If you want to cancel any pending deployment tasks and move all of the user accounts, click **Yes - Switch the users and fail the tasks**.
   - If you do not want to move the user accounts that have pending deployment tasks, click **No - Switch only the users that have no existing deployment tasks**.

**Delete a user account from the BlackBerry Enterprise Server Express**

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. In the search results, click the display name for the user account.
5. In the **BlackBerry Enterprise Server status** list, click **Disable as BlackBerry user**.
6. Perform one of the following actions:
   - To retain the BlackBerry Enterprise Server Express information in the user’s mailbox, click **Yes - Disable as BlackBerry user**.
   - To delete the BlackBerry Enterprise Server Express information from the user’s mailbox, click **Yes - Disable as a BlackBerry user and remove the BlackBerry information from the user’s mail system**. This command does not delete any data from the user's BlackBerry device.

7. Click **Back to search**.
8. In the **Search for users > User criteria** section, type the display name for the user account.
9. Click the display name for the user account.
10. In the Status list, click **Delete user**.

**Update a user account manually**

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. In the search results, click the display name for the user account.
5. In the Status list, click **Reload user**.

**Add an administrator role to a user account**

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. In the search results, click the display name for the user account.
5. Click **Edit user**.
6. On the **Roles** tab, in the **Available roles** list, click the role that you want to assign to the user account.
7. Click **Add**.
8. Click **Save all**.

**Update the contact list manually**

You can update the contact list in the BlackBerry® Configuration Database so that you can include any organizational changes or updates in the contact list. The amount of time that the BlackBerry Mail Store Service requires to update the contact list depends on the contact list size.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry solution topology > BlackBerry Domain > Component view**.
2. Click **Email**.
3. Click **Refresh available user list from company directory**.

**Resend service books to a BlackBerry device**

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. In the search results, click the BlackBerry device PIN.
5. In the **Communications** list, click **Resend service books to a device**.
Managing the delivery of BlackBerry Java Applications, BlackBerry Device Software, and device settings to BlackBerry devices

Managing the default distribution settings for jobs

When you create a software configuration and assign it to user accounts, change a software configuration that you assigned to user accounts, or assign or change an IT policy, the BlackBerry® Administration Service creates jobs to deliver the resulting objects or settings to BlackBerry devices. You can change the default settings that control how the BlackBerry Administration Service creates jobs and delivers job tasks to BlackBerry devices. You can also change the default settings that the BlackBerry Administration Service uses to deliver IT policies, BlackBerry Java® Applications, BlackBerry® Device Software, and standard application settings to BlackBerry devices.

Change default settings for a job schedule

When you create a software configuration and assign it to user accounts, when you change a software configuration that you assigned to user accounts, or assign or change an IT policy, the BlackBerry® Administration Service creates jobs to deliver the resulting objects or settings to BlackBerry devices. A job consists of multiple tasks. Each task delivers a specific object or setting to a BlackBerry device, for example, upgrading BlackBerry® Device Software, installing or removing a BlackBerry Java® Application, or sending updated IT policy settings or application settings.

You can change the default settings for a job to control how the BlackBerry Administration Service processes jobs. If you change the default settings for a job, your organization’s environment might experience a performance impact.

1. In the BlackBerry Administration Service, on the Devices menu, expand Deployment jobs.
2. Click Specify job schedule settings.
3. Click Edit job schedule settings.
4. In the Default delay for each job section, in the Default delay field, type the number of minutes that the BlackBerry Administration Service waits before it creates and processes a job.
   The default value is 15 minutes.
5. In the General section, in the Mark job as failed field, type the number of days that the BlackBerry Administration Service waits before it defines a job that was not delivered to BlackBerry devices as failed.
   The default value is 30 days.
6. In the Purge jobs field, type the number of days that the BlackBerry Administration Service waits before it deletes a failed job or a completed job.
   The default value is 7 days.
7. Click Save all.
Change how IT policies are sent to BlackBerry devices

You can change the settings that the BlackBerry® Administration Service uses to send all IT policy settings and updates to BlackBerry devices. If you change the default settings for IT policy distribution, your organization's environment might experience a performance impact.

1. In the BlackBerry Administration Service, on the Devices menu, expand Deployment jobs.
2. Click Specify IT policy distribution settings.
3. Click Edit distribution settings.
4. Perform any of the following tasks:

<table>
<thead>
<tr>
<th>Task</th>
<th>Steps</th>
</tr>
</thead>
</table>
| Change the default recurrence day for sending IT policy updates. | a. Click the Edit icon for the default recurrence day.  
b. In the Scheduled deployment day(s) drop-down list, click the appropriate recurrence option. If necessary, select the recurrence days.  
c. In the Start time drop-down list, click the appropriate option. If necessary, set the start time and end time.  
d. Click the Update icon. |
| Add a new recurrence day for sending IT policy updates. | If you want to add more than one recurrence day for sending IT policy updates, the schedules for the separate recurrence days cannot overlap.  
a. In the Scheduled deployment day(s) drop-down list, click the appropriate recurrence option. If necessary, select the recurrence days.  
b. In the Start time drop-down list, click the appropriate option. If necessary, set the start time and end time.  
c. Click the Add icon. |

5. On the System throttling tab, in the Maximum number of simultaneous tasks per BlackBerry Administration Service instance field, type the maximum number of tasks that you want the BlackBerry® Enterprise Server Express to process at the same time. The default value is 1000.
6. On the Job throttling tab, to turn on throttling for all IT policy tasks in jobs, select Enabled to reduce load on system.
7. If necessary, in the Default throttling for all IT policy tasks in each job in a time window section, in the Maximum number of simultaneous tasks per BlackBerry Administration Service instance field, type the maximum number of IT policy tasks that you want the BlackBerry Enterprise Server Express to process at the same time. The default value is 25.
8. If necessary, in the **Total number of tasks per time window per BlackBerry Administration Service instance** field, type the total number of IT policy tasks that you want the BlackBerry Enterprise Server Express to process during each processing interval. The default value is 150.

9. Click **Save all**.

### Change how to install, update, or remove BlackBerry Java Applications

You can change the settings that the BlackBerry® Administration Service uses to install and update BlackBerry® Java® Applications on BlackBerry devices, and remove BlackBerry Java Applications on BlackBerry devices. If you change the default application distribution settings, your organization’s environment might experience a performance impact.

1. In the BlackBerry Administration Service, on the **Devices** menu, expand **Deployment jobs**.
2. Click **Specify application distribution settings**.
3. Click **Edit distribution settings**.
4. Perform any of the following tasks:

<table>
<thead>
<tr>
<th>Task</th>
<th>Steps</th>
</tr>
</thead>
</table>
| Change the default recurrence day for installing, upgrading, or removing BlackBerry Java Applications. | a. Click the **Edit** icon for the default recurrence day.  
  b. In the **Scheduled deployment day(s)** drop-down list, click the appropriate recurrence option. If necessary, select the recurrence days.  
  c. In the **Start time** drop-down list, click the appropriate option. If necessary, change the start time and end time.  
  d. Click the **Update** icon.  
  By default, the recurrence day is Every day and the start time is All day. |
| Add a new recurrence day for installing, upgrading, or removing BlackBerry Java Applications. | If you want to add more than one recurrence day, the schedules for the separate recurrence days cannot overlap.  
  a. In the **Scheduled deployment day(s)** drop-down list, click the appropriate recurrence option. If necessary, select the recurrence days.  
  b. In the **Start time** drop-down list, click the appropriate option. If necessary, change the start time and end time.  
  c. Click the **Add** icon. |

5. On the **System throttling** tab, in the **Maximum number of simultaneous tasks per BlackBerry Administration Service instance** field, type the maximum number of tasks that you want the BlackBerry® Enterprise Server Express to process at the same time. The default value is 1000.
6. On the **Job throttling** tab, to turn on throttling for all application tasks in jobs, select **Enabled to reduce load on system**.

7. If necessary, in the **Default throttling for all application tasks in each job in a time window** section, in the **Maximum number of simultaneous tasks per BlackBerry Administration Service instance** field, type the maximum number of application tasks that you want the BlackBerry Enterprise Server Express to process simultaneously.
   The default value is 25.

8. If necessary, in the **Total number of tasks per time window per BlackBerry Administration Service instance** field, type the total number of application tasks that you want the BlackBerry Enterprise Server Express to process during each processing interval.
   The default value is 150.

9. Click **Save all**.

---

**Change how to install or update the BlackBerry Device Software**

You can change the settings that the BlackBerry® Administration Service uses to install or upgrade the BlackBerry® Device Software on BlackBerry devices. If you change the default distribution settings for the BlackBerry Device Software, your organization's environment might experience a performance impact.

1. In the BlackBerry Administration Service, on the **Devices** menu, expand **Deployment jobs**.
2. Click **Specify BlackBerry Device Software distribution settings**.
3. Click **Edit distribution settings**.
4. Perform any of the following tasks:

<table>
<thead>
<tr>
<th>Task</th>
<th>Steps</th>
</tr>
</thead>
</table>
| Change the recurrence day for installing, updating, or removing the BlackBerry Device Software. | a. Click the **Edit** icon for the recurrence day.  
b. In the **Scheduled deployment day(s)** drop-down list, click the appropriate recurrence option. If necessary, select the recurrence days.  
c. In the **Start time** drop-down list, click the appropriate option. If necessary, change the start time and end time.  
d. Click the **Update** icon.  
By default, the recurrence day is Every day and the start time is All day. |
| Add a recurrence day for installing, updating, or removing the BlackBerry Device Software. | To add more than one recurrence day, the schedules for the separate recurrence days cannot overlap.  
a. In the **Scheduled deployment day(s)** drop-down list, click the appropriate recurrence option. If necessary, select the recurrence days. |
5. On the **System throttling** tab, in the **Maximum number of simultaneous tasks per BlackBerry Administration Service instance** field, type the maximum number of BlackBerry Device Software tasks that you want the BlackBerry Enterprise Server Express to process at the same time. The default value is 1000.

6. On the **Job throttling** tab, to turn on throttling for all BlackBerry Device Software tasks in jobs, select **Enabled to reduce load on system**.

7. If necessary, in the **Default throttling for all BlackBerry Device Software tasks in each job in a time window** section, in the **Maximum number of simultaneous tasks per BlackBerry Administration Service instance** field, type the maximum number of BlackBerry Device Software tasks that you want the BlackBerry Enterprise Server Express to process at the same time. The default value is 25.

8. If necessary, in the **Total number of tasks per time window per BlackBerry Administration Service instance** field, type the total number of BlackBerry Device Software tasks that you want the BlackBerry Enterprise Server Express to process during each processing interval. The default value is 150.

9. Click **Save all**.

### Change how the BlackBerry Enterprise Server Express sends standard application settings to BlackBerry devices

BlackBerry® Device Software configurations include standard application settings that you can use to control calendar, email, and contact list settings on BlackBerry devices. You can change how the BlackBerry® Enterprise Server Express sends the settings to and updates the settings on BlackBerry devices. If you change the default distribution settings for the standard application settings, your organization's environment might experience a performance impact.

1. In the BlackBerry Administration Service, on the **Devices** menu, expand **Deployment jobs**.

2. Click **Specify BlackBerry Device Software application distribution settings**.

3. Click **Edit distribution settings**.

4. Perform any of the following tasks:

<table>
<thead>
<tr>
<th>Task</th>
<th>Steps</th>
</tr>
</thead>
</table>
| Change the recurrence day for sending or updating standard application settings. | a. Click the **Edit** icon for the default recurrence day.  
   
b. In the **Scheduled deployment day(s)** drop-down list, click the appropriate recurrence option. If necessary, click the recurrence days. |
<table>
<thead>
<tr>
<th>Task</th>
<th>Steps</th>
</tr>
</thead>
<tbody>
<tr>
<td>c. In the <strong>Start time</strong> drop-down list, click the appropriate recurrence option. If necessary, change the start time and end time.</td>
<td>d. Click the <strong>Update</strong> icon. By default, the recurrence day is Every day and the start time is All day.</td>
</tr>
<tr>
<td>Add a recurrence day for sending or updating standard application settings.</td>
<td>To add more than one recurrence day, the schedules for the separate recurrence days cannot overlap.</td>
</tr>
<tr>
<td>a. In the <strong>Scheduled deployment day(s)</strong> drop-down list, click the appropriate recurrence option. If necessary, click the recurrence days.</td>
<td>b. In the <strong>Start time</strong> drop-down list, click the appropriate recurrence option. If necessary, change the start time and end time.</td>
</tr>
<tr>
<td>c. Click the <strong>Add</strong> icon.</td>
<td></td>
</tr>
</tbody>
</table>

5. On the **System throttling** tab, in the **Maximum number of simultaneous tasks per BlackBerry Administration Service instance** field, type the maximum number of tasks that you want the BlackBerry Enterprise Server Express to process at the same time. The default value is 1000.

6. On the **Job throttling** tab, to turn on throttling for all tasks for standard application settings in jobs, click **Enabled to reduce load on system**.

7. If necessary, in the **Default throttling for all BlackBerry Device Software application settings tasks in each job in a time window** section, in the **Maximum number of simultaneous tasks per BlackBerry Administration Service instance** field, type the maximum number of tasks for standard application settings that you want the BlackBerry Enterprise Server Express to process at the same time. The default value is 25.

8. If necessary, in the **Total number of tasks per time window per BlackBerry Administration Service instance** field, type the total number of tasks for standard application settings that you want the BlackBerry Enterprise Server Express to process during each processing interval. The default value is 150.

9. Click **Save all**.

### Managing the distribution settings for a specific job

When you create a software configuration and assign it to user accounts, change a software configuration that you assigned to user accounts, or assign or change an IT policy, the BlackBerry® Administration Service creates jobs to deliver the resulting objects or settings to BlackBerry devices. Before the BlackBerry Administration Service delivers a specific job, you can change the delivery schedule of the job, priority of the job, and how the job delivers IT policies, BlackBerry Java® Applications, BlackBerry® Device Software, and standard application settings to BlackBerry devices.

If you do not change the schedule, priority, or distribution settings for a job, the job uses the default schedule and distribution settings that you configure in the BlackBerry Administration Service.
Specify the start time and priority for a job

If a job has not started running, you can specify when you want the job to start. If you do not specify the start time for a job, the job starts according to the distribution settings that you configured in the BlackBerry® Administration Service. You can also change the priority of a job. By default, all jobs have a medium priority. If you change the priority of a job to low, the BlackBerry® Enterprise Server Express processes it after the jobs with a medium or high priority. The BlackBerry Enterprise Server Express processes jobs with a high priority before it processes jobs with a medium or low priority.

1. In the BlackBerry Administration Service, on the Devices menu, expand Deployment jobs.
2. Click Manage deployment jobs.
3. Search for the job that you want to change.
4. In the search results, click the ID of the job that you want to change.
5. Click Edit job.
6. In the Priority drop-down list, click the appropriate priority for the job.
7. In the Job Schedule section, in the Effective Date field, select the start date for the job.
8. Click Save all.

Change how a job sends IT policies to BlackBerry devices

You can change how the BlackBerry® Administration Service sends IT policy settings and changes in a specific job to BlackBerry devices. You can change a job's distribution settings for IT policies only if the job is not running. If you changing the IT policy distribution settings for a job, your organization's environment might experience a performance impact.

1. In the BlackBerry Administration Service, on the Devices menu, expand Deployment jobs.
2. Click Manage deployment jobs.
3. Search for the job that you want to change.
4. In the search results, click the ID of the job that you want to change.
5. Click Edit job.
6. On the IT Policy Distribution tab, perform any of the following tasks:

<table>
<thead>
<tr>
<th>Task</th>
<th>Steps</th>
</tr>
</thead>
</table>
| Change the default recurrence day for sending IT policy changes. | a. Click the Edit icon for the default recurrence day.  
b. In the Scheduled deployment day(s) drop-down list, click the appropriate recurrence option. If necessary, select the recurrence days.  
c. In the Start time drop-down list, click the appropriate option. If necessary, change the start time and end time.  
d. Click the Update icon. |
<table>
<thead>
<tr>
<th>Task</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add a new recurrence day for sending IT policy changes.</td>
</tr>
<tr>
<td>If you want to add more than one recurrence day for sending IT policy changes, the schedules for the separate recurrence days cannot overlap.</td>
</tr>
<tr>
<td>a. In the Scheduled deployment day(s) drop-down list, click the appropriate recurrence option. If necessary, select the recurrence days.</td>
</tr>
<tr>
<td>b. In the Start time drop-down list, click the appropriate option. If necessary, change the start time and end time.</td>
</tr>
<tr>
<td>c. Click the Add icon.</td>
</tr>
</tbody>
</table>

7. To turn on throttling for all IT policy tasks in the job, in the Default throttling enablement for all IT policy tasks in each job in a time window section, select Enabled to reduce load on system.

8. If necessary, in the Default throttling for all IT policy tasks in each job in a time window section, in the Maximum number of simultaneous tasks per BlackBerry Administration Service instance field, type the maximum number of IT policy tasks in the job that you want the BlackBerry Enterprise Server Express to process at the same time. The default value is 25.

9. If necessary, in the Total number of tasks per time window per BlackBerry Administration Service instance field, type the total number of IT policy tasks in the job that you want the BlackBerry Enterprise Server Express to process during each processing interval. The default value is 150.

10. Click Save all.

**Change how a job sends BlackBerry Java Applications to BlackBerry devices**

You can change how the BlackBerry® Administration Service installs, updates, or removes the BlackBerry® Java® Applications in a specific job on BlackBerry devices. You can change a job’s distribution settings for applications only if the job is not running. If you change the default application distribution settings, your organization’s environment might experience a performance impact.

1. In the BlackBerry Administration Service, on the Devices menu, expand Deployment jobs.
2. Click Manage deployment jobs.
3. Search for the job that you want to change.
4. In the search results, click the ID of the job that you want to change.
5. Click Edit job.
6. On the Application Distribution tab, perform any of the following tasks:
### Task

<table>
<thead>
<tr>
<th>Change the default recurrence day for installing, upgrading, or removing BlackBerry Java Applications.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Steps</strong></td>
</tr>
<tr>
<td>a. Click the <strong>Edit</strong> icon for the default recurrence day.</td>
</tr>
<tr>
<td>b. In the <strong>Scheduled deployment day(s)</strong> drop-down list, click the appropriate recurrence option. If necessary, select the recurrence days.</td>
</tr>
<tr>
<td>c. In the <strong>Start time</strong> drop-down list, click the appropriate option. If necessary, change the start time and end time.</td>
</tr>
<tr>
<td>d. Click the <strong>Update</strong> icon.</td>
</tr>
</tbody>
</table>

By default, the recurrence day is Every day and the start time is All day.

<table>
<thead>
<tr>
<th>Add a new recurrence day for installing, upgrading, or removing BlackBerry Java Applications.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Steps</strong></td>
</tr>
<tr>
<td>a. In the <strong>Scheduled deployment day(s)</strong> drop-down list, click the appropriate recurrence option. If necessary, select the recurrence days.</td>
</tr>
<tr>
<td>b. In the <strong>Start time</strong> drop-down list, click the appropriate option. If necessary, change the start time and end time.</td>
</tr>
<tr>
<td>c. Click the <strong>Add</strong> icon.</td>
</tr>
</tbody>
</table>

If you want to add more than one recurrence day, the schedules for the separate recurrence days cannot overlap.

7. To turn on throttling for all application tasks in the job, on the **Default throttling enablement for all application tasks in each job in a time window** section, select **Enabled to reduce load on system**.

8. If necessary, in the **Default throttling for all application tasks in each job in a time window** section, in the **Maximum number of simultaneous tasks per BlackBerry Administration Service instance** field, type the maximum number of application tasks in the job that you want the BlackBerry Enterprise Server Express to process at the same time. The default value is 25.

9. If necessary, in the **Total number of tasks per time window per BlackBerry Administration Service instance** field, type the total number of application tasks in the job that you want the BlackBerry Enterprise Server Express to process during each processing interval. The default value is 150.

10. Click **Save all**.

### Change how a job sends the BlackBerry Device Software to BlackBerry devices

You can change how the BlackBerry® Administration Service installs or updates the BlackBerry® Device Software in a specific job on BlackBerry devices. You can change the distribution settings for a job for the BlackBerry Device Software only if the job is not running. If you change the default distribution settings for BlackBerry Device Software, your organization's environment might experience a performance impact.

1. In the BlackBerry Administration Service, on the **Devices** menu, expand Deployment jobs.
2. Click **Manage deployment jobs**.
3. Search for a job.
4. In the search results, click the ID of the appropriate job.
5. Click **Edit job**.
6. On the **BlackBerry Device Software Distribution** tab, perform any of the following tasks:

<table>
<thead>
<tr>
<th>Task</th>
<th>Steps</th>
</tr>
</thead>
</table>
| Change the recurrence day for installing, updating, or removing BlackBerry Device Software. | a. Click the **Edit** icon for the recurrence day.  
b. In the **Scheduled deployment day(s)** drop-down list, click the appropriate recurrence option. If necessary, click the number of recurrence days.  
c. In the **Start time** drop-down list, click the appropriate option. If necessary, change the start time and end time.  
d. Click the **Update** icon.  
By default, the recurrence day is Every day and the start time is All day. |
| Add a new recurrence day for installing, updating, or removing BlackBerry Device Software. | To add more than one recurrence day, the schedules for the separate recurrence days cannot overlap.  
a. In the **Scheduled deployment day(s)** drop-down list, click the appropriate recurrence option. If necessary, click the recurrence days.  
b. In the **Start time** drop-down list, click the appropriate recurrence option. If necessary, change the start time and end time.  
c. Click the **Add** icon. |

7. To turn on throttling for all BlackBerry Device Software tasks in jobs, in the **Default throttling enablement for all BlackBerry Device Software tasks in each job in a time window** section, click **Enabled to reduce load on system**.
8. If necessary, in the **Default throttling for all BlackBerry Device Software tasks in each job in a time window** section, in the **Maximum number of simultaneous tasks per BlackBerry Administration Service instance** field, type the maximum number of BlackBerry Device Software tasks in the job that you want the BlackBerry® Enterprise Server Express to process at the same time.  
The default value is 25.
9. If necessary, in the **Total number of tasks per time window per BlackBerry Administration Service instance** field, type the total number of BlackBerry Device Software tasks in the job that you want the BlackBerry Enterprise Server Express to process during each processing interval.  
The default value is 150.
10. Click **Save all**.
Change how a job sends standard application settings to BlackBerry devices

BlackBerry® Device Software configurations include standard application settings that you can use to control calendar, email, and contact list settings on BlackBerry devices. You can change how the BlackBerry Administration Service sends settings and updates in jobs to BlackBerry devices. If you change the default distribution settings for the standard application settings in BlackBerry Device Software configurations, your organization’s environment might experience a performance impact.

1. In the BlackBerry Administration Service, on the Devices menu, expand Deployment jobs.
2. Click Manage deployment jobs.
3. Search for a job.
4. In the search results, click the ID of the appropriate job.
5. Click Edit job.
6. On the BlackBerry Device Software Application Settings Distribution tab, perform any of the following tasks:

<table>
<thead>
<tr>
<th>Task</th>
<th>Steps</th>
</tr>
</thead>
</table>
| Change the recurrence day for sending or updating standard application settings. | a. Click the Edit icon for the recurrence day.  
b. In the Scheduled deployment day(s) drop-down list, click the appropriate recurrence option. If necessary, select the number of recurrence days.  
c. In the Start time drop-down list, click the appropriate recurrence option. If necessary, change the start time and end time.  
d. Click the Update icon. |
| Add a recurrence day for sending or updating standard application settings. | To add more than one recurrence day, the schedules for the separate recurrence days cannot overlap.  
a. In the Scheduled deployment day(s) drop-down list, click the appropriate recurrence option. If necessary, click the recurrence days.  
b. In the Start time drop-down list, click the appropriate recurrence option. If necessary, change the start time and end time.  
c. Click the Add icon. |

7. To turn on throttling for all tasks for standard application settings in the job, in the Default throttling enablement for all BlackBerry Device Software application tasks in each job in a time window section, click Enabled to reduce load on system.
8. If necessary, in the Default throttling for all BlackBerry Device Software Application Settings tasks in each job in a time window section, in the Maximum number of simultaneous tasks per BlackBerry Administration Service instance field, type the maximum number of tasks for standard application settings in the job that you want the BlackBerry® Enterprise Server Express to process at the same time. The default value is 25.

9. If necessary, in the Total number of tasks per time window per BlackBerry Administration Service instance field, type the total number of tasks for standard application settings in the job that you want the BlackBerry Enterprise Server Express to process during each processing interval. The default value is 150.

10. Click Save all.

Managing BlackBerry Java Applications on BlackBerry devices

Make a BlackBerry Java Application unavailable for installation

You can delete a BlackBerry® Java® Application and all versions of the application from the application repository if you do not want to make the BlackBerry Java Application available to add to software configurations. You cannot delete a BlackBerry Java Application from the application repository if the BlackBerry Java Application is in a software configuration.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand Software > Applications.
2. Click Manage applications.
3. Search for a BlackBerry Java Application.
4. In the search results, click the name of the application.
5. Click Delete application.
6. Click Yes - Delete the application and all application versions.

Remove a BlackBerry Java Application from BlackBerry devices over the wireless network

You can remove a BlackBerry® Java® Application from BlackBerry devices over the wireless network.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand Software.
2. Click Manage software configurations.
3. Click a software configuration.
4. Click Edit software configuration.
5. On the Applications tab, click the Delete icon for the application.
6. Perform one of the following actions:
• If you configured the software configuration to permit unlisted applications on BlackBerry devices and you want to permit users to install the application as an unlisted application, or if you configured the software configuration to not permit unlisted applications on BlackBerry devices, click **Save all**.

• If you configured the software configuration to permit unlisted applications on BlackBerry devices, and you do not want to permit users to install the application on their BlackBerry devices, perform steps 7 to 12.

7. Click **Add applications to software configuration**.
8. Search for the application that you want to remove.
9. In the search results, select the application.
10. In the **Disposition** drop-down list for the application, click **Disallowed**.
11. Click **Add to software configuration**.
12. Click **Save all**.

### Managing software configurations

#### Remove a software configuration from a group

If you remove a software configuration from a group, the applications in the software configuration are removed from the BlackBerry® devices that are associated with the user accounts that belong to the group.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **Group**.
2. Click **Manage groups**.
3. Click a group.
4. Click **Edit group**.
5. On the **Software configuration** tab, in the **Current software configurations** list, click a software configuration.
6. Click **Remove**.
7. Repeat steps 5 and 6 for each software configuration you want to remove.
8. Click **Save all**.

#### Remove a software configuration from multiple user accounts

If you remove a software configuration from multiple user accounts, the applications in the software configuration are removed from the BlackBerry® devices that are associated with the user accounts.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for one or more user accounts.
4. Select one or more user accounts.
5. In the **Remove from user configuration** list, click **Remove software configuration**.
6. In the **Available software configurations** list, click a software configuration.
7. Click Remove.
8. Repeat steps 6 and 7 for each software configuration that you want to remove from the user accounts.
9. Click Save.

Remove a software configuration from a user account

If you remove a software configuration from a user account, the applications in the software configuration are removed from the BlackBerry® device associated with the user account.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for one or more user accounts.
4. In the search results, click the display name for a user account.
5. Click Edit user.
6. On the Software configuration tab, in the Current software configurations list, click a software configuration.
7. Click Remove.
8. Repeat steps 6 and 7 for each software configuration that you want to remove.
9. Click Save all.

Delete a software configuration

You can delete a software configuration that is not assigned to a user account.

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Software.
2. Click Manage software configurations.
3. Click a software configuration.
4. Click Delete software configuration.
5. Click Yes - Delete the software configuration.
Managing how users access enterprise applications and web content

Restricting user access to content on web servers

You can prevent BlackBerry® device users from accessing specific web servers using the BlackBerry® Browser or applications on BlackBerry devices. To specify the web servers that you want users to access, you can turn on pull authorization to restrict access to all types of web content and create pull rules to specify a list of web servers that you permit users to access. Alternatively, you can create pull rules that specify a list of restricted web servers.

When you create pull rules, you can specify whether users must authenticate using RSA® authentication, integrated Windows® authentication, or both before the users can access the web servers.

Restrict requests for content on web servers from BlackBerry devices

Turn on pull authorization for a BlackBerry® MDS Connection Service to restrict the web addresses that users assigned to that BlackBerry MDS Connection Service can request when the users connect to the Internet or to your organization’s intranet from their BlackBerry devices.

1. In the BlackBerry Administration Service, in the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service.
2. Click the instance that you want to change.
3. Click Edit instance.
4. In the Access control section, in the Pull authorization drop-down list, click Yes.
5. Click Save all.

Users cannot access web content on their BlackBerry devices until you permit the users to access specific web servers using pull rules.

After you finish: To permit users to access specific web servers, specify allowed web address patterns and assign the web address patterns to a pull rule, and assign the pull rule to a user account or group.

Specify web address patterns

You can create pull rules that specify which web address patterns users can and cannot use to access web servers from the BlackBerry® Browser and other applications on their BlackBerry devices. To create a pull rule, you must first specify web address patterns (for example, specify addresses with domains that are allowed). You can assign the web address patterns to a pull rule that you create, and specify whether access to web servers that match the web address patterns is permitted or restricted on BlackBerry devices. After you create a pull rule, you must assign it to user accounts or groups.
A web site that uses DNS load balancing returns a single IP address to the BlackBerry MDS Connection Service but might use multiple IP addresses to provide access to the web site. As a result, the BlackBerry MDS Connection Service might not be able to restrict BlackBerry devices from accessing the web site.

1. In the BlackBerry Administration Service, in the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. Click MDS Connection Service.
3. Click Edit component.
4. On the Pull URL patterns tab, in the appropriate protocol section, type the web address pattern of a web server that you want to control access to. The web address patterns are based on Java® regular expressions (for example, \.*\..*domain.*).
5. Click the Add icon.
6. Click Save all.

After you finish: Create web address patterns for each web server that you want to permit users to access. Create a pull rule that permits users to access the web servers that match the web address patterns.

Create a pull rule

1. In the BlackBerry® Administration Service, in the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. Click MDS Connection Service.
3. Click Edit component.
4. On the Access control rules tab, in the Rule name field, type a name for the pull rule.
5. In the Control type drop-down list, click Pull.
6. Click the Add icon.
7. Click Save all.

After you finish: Restrict or permit web address patterns using a pull rule.

Restrict or permit web addresses and Intranet addresses using a pull rule

A web site that uses DNS load balancing returns a single IP address to the BlackBerry® MDS Connection Service but might use multiple IP addresses to provide access to the web site. As a result, the BlackBerry MDS Connection Service might not be able to restrict BlackBerry devices from accessing the web site.

Before you begin:

• Create a pull rule.
• If you want BlackBerry device users to use RSA® authentication to access web servers, configure the BlackBerry MDS Connection Service to authenticate BlackBerry devices to the RSA® Authentication Manager.
• If you want users to use integrated Windows® authentication when they access the web servers, configure the BlackBerry MDS Connection Service to authenticate devices to Microsoft® Active Directory®.
1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. Click MDS Connection Service.
3. Click Edit component.
4. On the Access control rules tab, click the Edit icon for a pull rule.
5. In the URL pattern group drop-down list, click the protocol for the address that you want to assign to the pull rule.
6. In the URL pattern drop-down list, click the address that you want to assign to the pull rule.
7. In the Allowed drop-down list, perform one of the following actions:
   • To prevent users from accessing web servers that match the address, click Deny.
   • To permit users to access web servers that match a specific address, click Allow.
8. If necessary, in the Authentication drop-down list, perform one of the following actions:
   • To require that a user enter authentication credentials to access content on a web site, click Access control rules only. The device user is not prompted to enter authentication credentials if they are not required by the web site.
   • To require that the BlackBerry MDS Connection Service authenticates a user using integrated Windows authentication, click Integrated.
   • To require that a user authenticates to the RSA Authentication Manager using RSA authentication, click RSA.
   • To require that the BlackBerry MDS Connection Service authenticates the user using integrated Windows authentication and that a user authenticates to the RSA Authentication Manager using RSA authentication, click Integrated and RSA.
9. Click the Add icon.
10. Repeat steps 5 to 8 for each address that you want to assign to the pull rule.
11. Click Save all.

After you finish: Assign the pull rule to a group or user account.

Assign a pull rule to the members of a group

Before you begin: Create a pull rule. Assign web address patterns to the pull rule.

1. In the BlackBerry® Administration Service, in the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Click View more criteria.
4. Search for a group.
5. Click Select all results in the entire set.
6. In the Add to user configuration list, click Add pull rule.
7. In the Available pull rules list, click a pull rule.
8. Click Add.
9. Click Save.
Assign a pull rule to user accounts

**Before you begin:** Create a pull rule. Assign web address patterns to the pull rule.

1. In the BlackBerry® Administration Service, in the **BlackBerry solution management** menu, expand User.
2. Click **Manage users**.
3. Search for one or more user accounts.
4. Select the appropriate user accounts.
5. In the **Add to user configuration** list, click **Add pull rule**.
6. In the **Available pull rules** list, click a pull rule.
7. Click **Add**.
8. Click **Save**.

Restricting user access to media content in the BlackBerry Browser

You can use standard definitions for MIME media types so that you can restrict the media types that the BlackBerry® MDS Connection Service can send to the BlackBerry® Browser and other applications on BlackBerry devices.

For more information about MIME media types, visit [www.iana.org](http://www.iana.org).

Prevent users from accessing specific media types

You can configure the BlackBerry® MDS Connection Service instances in your organization's environment to prevent users from accessing every format of a media type (for example, video), or a specific format of a media type (for example, .mp3), using the BlackBerry® Browser and other applications on a BlackBerry device.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view**.
2. Click **MDS Connection Service**.
3. Click **Edit component**.
4. In the **Media content type** field, type the media type and subtype using standard definitions for MIME media types. Use the format `<type>/<subtype>`.
5. In the **Disallow content** drop-down list, click **Yes**.
6. Click the **Add** icon.
7. Click **Save all**.
Configure download limits for media content types

You can configure the BlackBerry® MDS Connection Service instances in your organization’s environment to limit the size of media content that BlackBerry device users can download to BlackBerry devices during each connection. Each request for data that the device makes to the BlackBerry MDS Connection Service is a connection. If you do not configure a limit for media content types, the default values apply.

Before you begin: For more information about MIME media types, visit www.iana.org/assignments/media-types.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. Click MDS Connection Service.
3. Click Edit component.
4. In the Media content type field, type the media type and subtype using standard definitions for MIME media types. Use the format <type>/<subtype>. You can substitute an asterisk (*) to represent all types or subtypes except for the types you have already configured. Some examples of entries for the Media content type field include application/msword, application/pdf, video/mpeg, application/*, image/*, */*.
5. In the Maximum KB/Connection field, type the maximum size (in KB) of content that a user can download to the device, during each connection to the BlackBerry MDS Connection Service.
6. In the Disallow content drop-down list, click No.
7. Click the Add icon.
8. Click Save all.

Configuring Integrated Windows authentication so that users can access resources on your organization's network

To permit BlackBerry® device users to access resources on your organization's network using BlackBerry devices without requiring the users to type a user name and password each time they access the network resources, you can configure the BlackBerry MDS Connection Service to support Integrated Windows® authentication. Users can then access network resources such as intranet sites and network shared folders on their devices using the BlackBerry® Browser or Files application without typing a user name and password.

Before you configure the BlackBerry MDS Connection Service to support Integrated Windows authentication, you must create a Microsoft® Active Directory® account in each Microsoft Active Directory domain that includes resources that you want to turn on Integrated Windows authentication for. You must configure constrained delegation for the Microsoft Active Directory accounts so that they delegate access to each intranet site or network shared folder in the Microsoft Active Directory domain.

You must also configure two-way trust between the Microsoft Active Directory domain that the BlackBerry MDS Connection Service is running on and other Microsoft Active Directory domains in other forests that the BlackBerry MDS Connection Service must connect to. The S4U2proxy extension that the BlackBerry MDS Connection Service uses to retrieve the Kerberos™ service tickets for users requires a two-way trust between Microsoft Active Directory domains.

After you turn on Integrated Windows authentication and specify a Microsoft Active Directory account in the BlackBerry Administration Service, you must specify web address patterns for the network resources that you want to permit users to access, create a pull rule for the web address patterns, permit access to the web address patterns using the pull rule, and assign the pull rule to users or a group.

After you configure the BlackBerry MDS Connection Service to support Integrated Windows authentication, the BlackBerry MDS Connection Service uses the Microsoft Active Directory account to verify login information for a user and access the network resources on behalf of the user. The BlackBerry Enterprise Server Express then sends information from the network resources to the user's device.

Configuring the Microsoft Active Directory account to delegate access

**Prerequisites:** Configuring the Microsoft Active Directory account to delegate access to an intranet site

- Verify that you configured Integrated Windows® authentication for the application server that hosts the intranet site.
• Verify that the application server that hosts the intranet site and the web application that runs on the application server support Kerberos™ authentication.
• Verify that you have permission to update the Microsoft® Active Directory® account in Microsoft Active Directory.
• Verify that you have access to the Windows Server® setspn tool that is included with the Windows Server Support Tools. For more information about the setspn tool, visit http://technet.microsoft.com to read Setspn Overview.
• If you did not configure a Microsoft Active Directory account to delegate access to an intranet site or shared folder, in Microsoft Active Directory, you must create a Microsoft Active Directory account that should have the following conditions:
  • a password that meets the security requirements of your organization
  • the user is not required to change their password the next time that the user logs in
  • the user's password never expires
• If you configured a pool of application servers to host the intranet site, and the pool is running on Microsoft® IIS and is located behind a load balancer, specify a user account (also known as the identity) for the pool that hosts the intranet site. For more information, see http://technet.microsoft.com/en-us/library/cc771170(WS.10).aspx.

Configure the Microsoft Active Directory account to delegate access to an intranet site

You are required to have only one Microsoft® Active Directory® account in each Microsoft Active Directory domain that includes the resources that you want to turn on Integrated Windows® authentication for.

For more information about configuring the Microsoft Active Directory account using setspn and Microsoft Active Directory, visit www.blackberry.com/btsc to read article KB22726.

1. If a pool of application servers host a intranet site and the pool is running on Microsoft® IIS and is located behind a load-balancer, use setspn or ADSI to add the SPNs of the intranet site to the user account (also known as the identity) of the pool. You must configure the SPNs using the FQDN and the name of the intranet site that users type into their browsers (for example, if users type http://intranet_site in their browsers, the name of the intranet site is intranet_site).

2. In Microsoft Active Directory, in the Microsoft Active Directory account properties, if the Delegation tab does not display, update the default HOST SPN registrations for the Microsoft Active Directory account.

3. In the Microsoft Active Directory account properties, on the Delegation tab, configure the following settings:
   • trust this user for delegation to specified services only
   • use any authentication protocol

4. Click Add.

5. Perform one of the following tasks:
   • If a pool of application servers hosts the intranet site and the pool is running on Microsoft IIS and is located behind a load-balancer, select the user account that runs the application pools in the Microsoft IIS servers.
   • If the intranet site is hosted by one application server, select the application server that hosts the intranet site.
6. Select the HTTP service type for the user account or application server that you specified.
7. Repeat steps 1 to 6 for each intranet site that you want to turn on integrated Windows authentication for.

After you finish:
- If required, configure BlackBerry® MDS Connection Service to use a Microsoft Active Directory account when the messaging server is in a remote Microsoft Active Directory domain.
- Turn on Integrated Windows authentication when users access resources on your organization's network.

Prerequisites: Configuring the Microsoft Active Directory account to delegate access to a shared folder
- Verify that you configured Integrated Windows® authentication for the file server that hosts the shared folders.
- Verify that you have permission to update the Microsoft® Active Directory® account in Microsoft Active Directory.
- Verify that you have access to the Windows Server® setspn tool that is included with the Windows Server Support Tools. For more information about the setspn tool, visit http://technet.microsoft.com to read Setspn Overview.
- If you did not configure a Microsoft Active Directory account to delegate access to an intranet site or shared folder, in Microsoft Active Directory, you must create a Microsoft Active Directory account that should have the following conditions:
  - the password meets the security requirements of your organization
  - the user is not required to change their password the next time that the user logs in
  - the user’s password never expires

Configure the Microsoft Active Directory account to delegate access to a shared folder
You are required to have only one Microsoft® Active Directory® account in each Microsoft Active Directory domain that includes the resources that you want to turn on Integrated Windows® authentication for.

For more information about configuring the Microsoft Active Directory account using setspn and Microsoft Active Directory, visit www.blackberry.com/btsc to read article KB22726.

1. In Microsoft Active Directory, in the Microsoft Active Directory account properties, if the Delegation tab does not display, update the default HOST SPN registrations for the Microsoft Active Directory account.
2. In the Microsoft Active Directory account properties, on the Delegation tab, configure the following settings:
  - trust this user for delegation to specified services only
  - use any authentication protocol
3. Click Add.
4. Select the the file server that hosts the shared folder.
5. Select the CIFS service type for the file server that you specified.
6. Repeat steps 3 to 5 for each shared folder that you want to turn on Integrated Windows authentication for.

After you finish:
• If required, configure BlackBerry® MDS Connection Service to use a Microsoft Active Directory account when the messaging server is in a remote Microsoft Active Directory domain.
• Turn on Integrated Windows authentication when users access resources on your organization's network.

Configuring the BlackBerry MDS Connection Service when the messaging server is located in a remote Microsoft Active Directory domain

If the computer that hosts the BlackBerry® MDS Connection Service is not located in the same Microsoft® Active Directory® domain as the global catalog server or messaging server and you want to configure support for Integrated Windows® authentication, you must create a Microsoft Active Directory account that the BlackBerry MDS Connection Service can use to connect to the global catalog server.

In a Microsoft® Exchange environment, you must create the Microsoft Active Directory account in the Microsoft Active Directory domain that includes the messaging server.

In an IBM® Lotus® Domino® environment, if the messaging server is located in the same Microsoft Active Directory domain as the global catalog server, you must create the Microsoft Active Directory account in that domain. If the messaging server is located in a different Microsoft Active Directory domain than the global catalog server, you must create the Microsoft Active Directory account in the Microsoft Active Directory domain that includes the global catalog server.

You do not need to configure constrained delegation for the Microsoft Active Directory account that you create in the Microsoft Active Directory domain that includes the messaging server or global catalog server.

Configure the BlackBerry MDS Connection Service when the messaging server is located in a remote Microsoft Active Directory domain

Before you begin: Create a Microsoft® Active Directory® account in the Microsoft Active Directory domain that the messaging server or global catalog server is located in.

1. On the computer that hosts the BlackBerry® MDS Connection Service, navigate to `<drive>:\Program Files \Research In Motion\BlackBerry Enterprise Server\MDS\Servers\instance\config`.
2. In a text editor, open the `rimpublic.properties` file.
3. In the `rimpublic.properties` file, type `application.handler.exchange.domain=<domain_name>` where `<domain_name>` is the Microsoft Active Directory domain that contains the messaging server. For example, type `application.handler.exchange.domain=domain123.example.com`.
4. Save and close the `rimpublic.properties` file.
5. In the Windows® Services, restart the BlackBerry MDS Connection Service service.

After you finish: Turn on Integrated Windows authentication when BlackBerry device users access resources on your organization's network.

Related topics
Restarting BlackBerry Enterprise Server Express components, 277
Turn on Integrated Windows authentication so that users can access resources on your organization's network

Before you begin:
• Configure the Microsoft® Active Directory® account to access resources on your organization's network.
• If required, configure BlackBerry® MDS Connection Service to use a Microsoft Active Directory account when the messaging server is in a remote Microsoft Active Directory domain.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry solution topology > BlackBerry Domain > Component view.
2. Click MDS Connection Service.
3. Click Edit component.
4. In the Integrated authentication turned on drop-down list, click Yes.
5. For each Microsoft Active Directory account, provide the following information:
   • In the Delegation user domain field, type the FQDN (for example, ldap.example.com).
   • In the Delegation user name field, type the user name.
   • In the Password and Confirm fields, type the password.
6. Click Save all.
7. On the HTTP tab, click Edit component.
8. In the Authentication support enabled drop-down list, click Yes.
9. Click Save all.
10. On the Pull URL Patterns tab, specify web address patterns for the intranet sites or shared folders that you want to permit BlackBerry device users to access (for example, intranet_site(:80)?(\/.*)?). The web address patterns are based on Java® regular expressions. Consider specifying the following web address patterns:
   • Specify .*/.* as the web address pattern so that you can prevent users from using any other web address patterns to access intranet sites or shared network folders.
   • Specify .* as the web address pattern for OCSP, LDAP, and TCP to permit users to communicate with OCSP servers, LDAP servers, or TCP servers.
11. On the Access control rules tab, create a pull rule for each of the web address patterns that you specified. When you create the pull rule, in the Authentication drop-down list, click Integrated or Integrated and RSA.
12. Click Save all.
13. Assign the pull rules to the users or groups that you want to access intranet sites or shared network folders.
15. Click a BlackBerry MDS Connection Service instance.
16. Click Edit instance.
17. In the Pull Authorization drop-down list, click Yes.
18. Click Save all.
19. Repeat step 16 to 20 for each BlackBerry MDS Connection Service instance.
Restricting the push application content that users can receive

By default, a BlackBerry® MDS Connection Service sends push requests from server-side push applications to applications on BlackBerry devices. BlackBerry devices can receive application data and application updates without users requesting the content.

You can configure your organization's environment so that only specific server-side push applications can send push requests to BlackBerry devices. You can turn on push authentication to prevent a BlackBerry MDS Connection Service from sending push requests, and create push initiators that permit specific server-side applications to send push requests to BlackBerry devices. To permit specific users to receive push requests on BlackBerry devices, you can create push rules and assign the rules to the users.

For more information about push requests, see the *BlackBerry Java Development Environment Development Guide*.

Restrict push applications from sending data to BlackBerry devices

You can turn on push authentication to permit only authenticated push applications to send push requests to applications on BlackBerry® devices.

1. In the BlackBerry Administration Service, in the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service.
2. Click the instance that you want to change.
3. Click Edit instance.
4. In the Access control section, in the Push authentication options, click Yes.
5. Click Save all.

After you finish: To authenticate and permit specific server-side push applications to send push requests to BlackBerry devices, create push initiators.

Create push initiators for push applications

Push initiators specify which server-side push applications are authenticated and permitted to send push requests to applications on BlackBerry® devices. For push initiators to work, you must turn on push authentication for the BlackBerry MDS Connection Service. You can configure several server-side push applications to use the same push
initiator (that is, to use the same authorization password) if your organization's development environment permits it. Verify that the authorization HTTP header in push requests from server-side push applications matches the name and password that you specify for the push initiator.

**Before you begin:** Turn on push authentication for the appropriate instances of the BlackBerry MDS Connection Service.

1. In the BlackBerry Administration Service, in the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view**.
2. Click **MDS Connection Service**.
3. Click **Edit component**.
4. On the **Push initiators** tab, in the **Name** field, type the name of the server-side application that you want to permit to send push requests to BlackBerry devices.
5. In the **Credentials** field, type the password for the server-side push application.
6. Click the **Add** icon.
7. Click **Save all**.

**After you finish:** Create a push initiator for each server-side push application that you want to permit to send push requests to BlackBerry devices. To specify which users can receive push requests from authenticated push applications, turn on push authorization and create push rules.

**Turn on push authorization**

If you turned on push authentication and created push initiators to specify which push applications can send push requests, you can create push rules to specify which users are permitted to receive authenticated push requests. The BlackBerry® MDS Connection Service can apply push rules only if you turn on push authorization for the BlackBerry MDS Connection Service.

**Before you begin:**
- Turn on push authentication.
- Create push initiators to authenticate specific push applications.

1. In the BlackBerry Administration Service, in the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service**.
2. Click the instance that you want to change.
3. Click **Edit instance**.
4. In the **Access control** section, in the **Push authorization** drop-down list, click **Yes**.
5. Click **Save all**.

**After you finish:** Create a push rule.

**Related topics**

- Restrict push applications from sending data to BlackBerry devices, 225
**Create a push rule**

1. In the BlackBerry® Administration Service, in the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view**.
2. Click **MDS Connection Service**.
3. Click **Edit component**.
4. On the **Access control rules** tab, in the **Rule name** field, type a name for the push rule.
5. In the **Control type** drop-down list, click **Push**.
6. Click the **Add** icon.
7. Click **Save all**.

**After you finish:** Assign push initiators to the push rule.

**Assign push initiators to a push rule**

**Before you begin:** Create push initiators to authenticate specific push applications.

1. In the BlackBerry® Administration Service, in the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view**.
2. Click **MDS Connection Service**.
3. Click **Edit component**.
4. On the **Access control rules** tab, click the **Edit** icon for a push rule.
5. In the **Available push initiators** list, click the push initiator that you want to assign to the push rule.
6. Click **Add**.
7. Repeat steps 5 and 6 for each push initiator that you want to assign to the push rule.
8. Click **Save all**.

**After you finish:** Assign the push rule to a user account or to a group.

**Related topics**

Create push initiators for push applications, 225

**Assign a push rule to the members of a group**

**Before you begin:**

- Create a push rule.
- Assign push initiators to the push rule.

1. In the BlackBerry® Administration Service, in the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Click **View more criteria**.
4. Search for a group.
5. Click Select all results in the entire set.
6. In the Add to user configuration list, click Add push rule.
7. In the Available push rules list, click a push rule.
8. Click Add.
9. Click Save.

Assign a push rule to user accounts

Before you begin:
• Create a push rule.
• Assign push initiators to the push rule.

1. In the BlackBerry® Administration Service, in the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for one or more user accounts.
4. Select the user accounts that you want to assign a push rule to.
5. In the Add to user configuration list, click Add push rule.
6. In the Available push rules list, click a push rule.
7. Click Add.
8. Click Save.

Encrypt push requests that push applications send to BlackBerry devices

You can configure a BlackBerry® MDS Connection Service to use SSL or TLS to encrypt the push requests that server-side push applications send to BlackBerry devices. By default, the BlackBerry MDS Connection Service does not encrypt the push requests that server-side push applications send.

1. In the BlackBerry Administration Service, in the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service.
2. Click the instance that you want to change.
3. Click Edit instance.
4. In the Access control section, in the Push encryption drop-down list, click Yes.
5. Click Save all.

Managing push application requests

The BlackBerry® MDS Connection Service receives push application requests from server-side push applications and sends the requests to applications on BlackBerry devices. You can control how the BlackBerry MDS Connection Service processes, stores, and sends push application requests.
For more information about types of push requests, visit www.blackberry.com/developers to see the *BlackBerry Java Development Environment Development Guide*.

**Specify device ports for application-reliable push requests**

Application developers can create BlackBerry® Java® Applications to manage application-reliable push requests. When a BlackBerry Java Application receives an application-reliable push request, it sends a delivery confirmation message to the BlackBerry MDS Connection Service, which sends the message to the server-side push application. You must specify the device port numbers that the BlackBerry Java Applications listen on for application-reliable push requests.

**Before you begin:** Contact your organization's application developers for the unique port numbers that they defined for BlackBerry Java Applications that support application-reliable push requests.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service**.
2. Click the instance that you want to specify device ports for.
3. Click **Edit instance**.
4. In the **Device ports enabled for reliable pushes** field, type the device port number.
5. Click the **Add** icon.
6. Repeat steps 4 to 5 for each device port number that you want to add.
7. Click **Save all**.
8. Click **Restart instance**.

**Store push application requests in the BlackBerry Configuration Database**

To manage memory and system resources in your organization's environment, you can configure a BlackBerry® MDS Connection Service to store PAP and Research In Motion® push requests in the BlackBerry Configuration Database. You can also configure storage settings for the BlackBerry Configuration Database. For more information about types of push requests, visit www.blackberry.com/developers to see the *BlackBerry Java Development Environment Development Guide*.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service**.
2. Click the instance that you want to change.
3. Click **Edit instance**.
4. In the **Push access protocol** section, in the **Store push submissions** drop-down list, click **Yes**.
5. Click **Save all**.
6. Click **Restart instance**.

**After you finish:** Configure the settings for storing push requests in the BlackBerry Configuration Database.
Configure the settings for storing push requests in the BlackBerry Configuration Database

To manage your organization's system resources, you can configure storage settings for push requests that are stored in the BlackBerry® Configuration Database.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. Click MDS Connection Service.
3. Click Edit component.
4. In the Push message settings section, in the Maximum number of push messages stored field, type the number of push requests that you want the BlackBerry Configuration Database to store.
5. In the Maximum push message age field, type the maximum length of time, in minutes, that you want the BlackBerry Configuration Database to store a push request before the BlackBerry® Enterprise Server Express deletes it from the BlackBerry Configuration Database.
6. Click Save all.

Configure the maximum number of active connections that a BlackBerry MDS Connection Service can process

You can configure the maximum number of push connections that a BlackBerry® MDS Connection Service can process at the same time. The BlackBerry MDS Connection Service queues the push connections that exceed this limit.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service.
2. Click the instance that you want to configure active connections for.
3. Click Edit instance.
4. In the Push access protocol section, in the Maximum number of active connections field, type a number.
5. Click Save all.
6. Click Restart instance.

Configure the maximum number of queued connections that a BlackBerry MDS Connection Service can process

The BlackBerry® MDS Connection Service queues push connections when the number of connections exceeds a limit that you specify. You can configure the maximum number of push connections that a BlackBerry MDS Connection Service can queue. The BlackBerry MDS Connection Service sends a "service unavailable" message to BlackBerry devices when the number of pending push connections in the queue exceeds the limit.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > MDS Connection Service.
2. Click the instance that you want to configure the maximum number of queued connections for.
3. Click Edit instance.
4. In the Push access protocol section, in the Maximum number of queued connections field, type a number.
5. Click Save all.
6. Click Restart instance.

Managing organizer data synchronization

Managing the wireless backup and recovery of organizer data

The wireless backup feature backs up user account settings and data from BlackBerry® devices to the BlackBerry® Enterprise Server Express automatically. You can use the wireless backup feature to synchronize organizer data to BlackBerry devices without affecting the performance of your organization’s messaging server. You can also use the wireless backup feature to restore data from the BlackBerry Enterprise Server Express to the BlackBerry device. By default, wireless backup is turned on when you activate BlackBerry devices.

Turn off the wireless backup of organizer data for a user account

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for a user account.
4. In the search results, click the display name for the user account.
5. Click Edit user.
6. In the Messaging configuration section, click Default configuration.
7. On the Organizer data synchronization tab, in the General section, in the Automatic wireless backup turned on drop-down list, click No.
8. Click Continue to user information edit.
9. Click Save all.

Delete organizer data for members of a user group from the BlackBerry Enterprise Server Express

If the BlackBerry® Enterprise Server Express is not writing organizer data for members of a user group from their BlackBerry devices to the BlackBerry Configuration Database correctly, the organizer data on the BlackBerry Enterprise Server Express might be corrupted. You can delete the organizer data from the BlackBerry Enterprise Server Express. This action forces the BlackBerry devices to synchronize the current organizer data with the BlackBerry Enterprise Server Express over the wireless network.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Click Advanced search.
4. In the Group criteria section, in the Specific group drop-down list, click the appropriate group.
5. Click Search.
6. Click Manage multiple users.
7. Select all users.
8. Under Organizer data synchronization, click Clear backed up data for organizer data synchronization.

**Delete a user's organizer data from a BlackBerry Enterprise Server Express**

If the BlackBerry® Enterprise Server Express writes a user’s organizer data from a BlackBerry device to the BlackBerry Configuration Database incorrectly, the organizer data on the BlackBerry Enterprise Server Express might become corrupt. In this case, you can delete the organizer data from the BlackBerry Enterprise Server Express.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for one or more user accounts.
4. Click Manage multiple users.
5. Select the appropriate user accounts.
6. In the Organizer data synchronization list, click Clear backed up data for organizer data synchronization.

**Turning off organizer data synchronization**

**Turn off organizer data synchronization for all user accounts that are associated with a BlackBerry Enterprise Server Express**

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Synchronization.
2. Click the instance that you want to change.
3. In the Instance information section, click Synchronization.
4. Click Edit component.
5. In the Synchronization turned on drop-down list, click False for each type of organizer data.
6. Click Save all.

**Turn off organizer data synchronization for a specific user account**

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for a user account.
4. In the search results, click the display name for the user account.
5. Click Edit user.
6. In the Messaging configuration section, click Default configuration.
7. On the Organizer data synchronization tab, in the General section, perform one of the following actions:
• To prevent the synchronization of organizer data, in the **Wireless Synchronization turned on** drop-down list, click **No**.
• To prevent the synchronization of specific types of organizer data, in the **General** section, in the **Wireless Synchronization turned on** drop-down list, click **Yes**. In the **Synchronization turned on** drop-down list, click **No** for each type of organizer data that you do not want to synchronize.

8. Click **Continue to user information edit**.
9. Click **Save all**.

**Changing how organizer data synchronizes**

**Change the direction of organizer data synchronization for all user accounts on a BlackBerry Enterprise Server Express**

1. In the BlackBerry® Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > Synchronization**.
2. Click the instance that you want to change.
3. In the **Instance information** section, click **Synchronization**.
4. Click **Edit component**.
5. For each type of organizer data, in the **Synchronization type** drop-down list, perform one of the following actions:
   • To synchronize data from the BlackBerry® Enterprise Server Express to the BlackBerry device only, click **Server to Device**.
   • To synchronize data from the BlackBerry device to the BlackBerry Enterprise Server Express only, click **Device to Server**.
   • To synchronize data from the BlackBerry device to the BlackBerry Enterprise Server Express and from the BlackBerry Enterprise Server Express to the BlackBerry device, click **Bidirectional**.
6. Click **Save all**.

**Change the direction of organizer data synchronization for a specific user account**

1. In the BlackBerry® Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. In the search results, click the display name of the user account.
5. Click **Edit user**.
6. In the **Message configuration** section, click **Default configuration**.
7. On the **Organizer data synchronization** tab, for each type of organizer data, in the **Synchronization type** drop-down list, perform one of the following actions:
• To synchronize data from the BlackBerry® Enterprise Server Express to the BlackBerry device only, click Server to Device.
• To synchronize data from the BlackBerry device to the BlackBerry Enterprise Server Express only, click Device to Server.
• To synchronize data from the BlackBerry device to the BlackBerry Enterprise Server Express and from the BlackBerry Enterprise Server Express to the BlackBerry device, click Bidirectional.

8. Click Continue to user information edit.
9. Click Save all.

Change how the BlackBerry Administration Service resolves conflicts during organizer data synchronization for all user accounts on a BlackBerry Enterprise Server Express

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Synchronization.
2. Click the instance that you want to change.
3. In the Instance information section, click Synchronization.
4. Click Edit component.
5. In the Conflict resolution drop-down list, perform one of the following actions for each type of organizer data:
   • To specify that the BlackBerry® Enterprise Server Express data overrides the BlackBerry device data, click Server Wins.
   • To specify that the BlackBerry device data overrides the BlackBerry Enterprise Server Express data, click Device Wins.
6. Click Save all.

Change how the BlackBerry Administration Service resolves conflicts during organizer data synchronization for a specific user account

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for a user account.
4. In the search results, click the display name for the user account.
5. Click Edit user.
6. In the Messaging configuration section, click Default configuration.
7. On the Organizer data synchronization tab, for each type of organizer data, in the Conflict resolution drop-down list, perform one of the following actions:
   • To specify that the BlackBerry® Enterprise Server Express data overrides the BlackBerry device data, click Server Wins.
• To specify that the BlackBerry device data overrides the BlackBerry Enterprise Server Express data, click Device Wins.
8. Click Continue to user information edit.
9. Click Save all.

Synchronizing contact pictures

By default, the BlackBerry® Synchronization Service synchronizes pictures that a user adds to contact entries in their contact list between the BlackBerry device and the email applications on their computer. A user can add, delete, and change pictures in the email applications on the computer or on the BlackBerry device.

If a picture is larger than 32 KB, the BlackBerry Synchronization Service cannot synchronize the contact picture to a BlackBerry device from an email application.

Turn off synchronization of contact pictures for a user account

Before you begin:
Verify that you turned on the mappings for organizer data synchronization for a specific user account.

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for a user account.
4. In the search results, click the display name for the user account.
5. Click Edit user.
6. In the Messaging configuration section, click Default configuration.
7. On the Mappings for organizer data synchronization tab, in the Additional mappings section, in the Picture drop-down list, click None.
8. Click Continue to user information edit.
9. Click Save all.
Managing your organization's messaging environment and attachment support

Managing message forwarding

You can define the message forwarding settings for user accounts and groups that are associated with the BlackBerry® Enterprise Server Express. The settings control how the BlackBerry Enterprise Server Express forwards email messages from users’ email applications to their BlackBerry devices. You can also manage individual user accounts, provide support to users, control the size of the message queue, and control the load on the BlackBerry Messaging Agent to process forwarding requests. By default, email message forwarding is turned on when you add a user account to the BlackBerry Enterprise Server Express.

Users can configure message forwarding settings on their BlackBerry devices, or by using the BlackBerry® Desktop Manager or the BlackBerry® Web Desktop Manager. The settings that you define override the settings that users define.

Forward email messages to a BlackBerry device when no filter rules apply

You can configure a BlackBerry® Enterprise Server Express to deliver incoming messages to a user’s BlackBerry device when no email message filters apply to those messages.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for a user account.
4. In the search results, click the name of a user account.
5. In the Messaging configuration section, click Default configuration.
6. Click Edit user.
7. On the Email tab, in the Email message filter rules section, click Forward email messages to the device.
8. Click Continue to user information edit.
9. Click Save all.

Do not deliver email messages to a BlackBerry device when no filter rules apply

You can configure a BlackBerry® Enterprise Server Express to prevent the delivery of incoming email messages to a user’s BlackBerry device when no email message filters apply to the email messages.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for a user account.
4. In the search results, click the name of a user account.
5. In the **Messaging configuration** section, click **Default configuration**.

6. Click **Edit user**.

7. On the **Email** tab, in the **Email message filter rules** section, click **Do not forward email messages to the device**.

8. Click **Continue to user information edit**.

9. Click **Save all**.

### Forward email messages from inbox subfolders to a BlackBerry device

You can specify which subfolders in a user’s email application that the BlackBerry® Enterprise Server Express can forward email messages from. By default, a BlackBerry Enterprise Server Express forwards messages from the inbox only.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **User**.

2. Click **Manage users**.

3. Search for a user account.

4. In the search results, click the name of the user account.

5. Click **Edit user**.

6. In the **Messaging configuration** section, click **Default configuration**.

7. On the **Email** tab, in the **Redirection settings** section, perform one of the following actions:
   - To forward email messages from the user’s inbox only, click **Inbox only**.
   - To forward email messages from the user’s inbox and sent items folder, click **Inbox and sent items only**.
   - To select the folders that you want the BlackBerry Enterprise Server Express to forward messages from, click **Selected folders**. Click the folders that you want to forward messages from.

8. Click **Continue to user information edit**.

9. Click **Save all**.

### Turn off email message forwarding to user accounts in a group

You can temporarily stop the BlackBerry® Enterprise Server Express from forwarding email messages to user accounts that belong to a user group (for example, if the members of the user group are out of a wireless coverage area and do not want to receive email messages during that time). When you turn off message forwarding for user accounts, users can send email messages from their BlackBerry devices, but cannot receive email messages.

Users can turn on email message forwarding on the BlackBerry device manually.

1. In the BlackBerry Administration Service, on the **BlackBerry Solution management** menu, expand **User**.

2. Click **Manage users**.

3. Click **Advanced search**.

4. In the **Group criteria** section, in the **Specific group** drop-down list, click the group you want to turn off message forwarding for.

5. Click **Search**.
6. Click **Manage multiple users**.
7. Select all users.
8. Under **Device services**, click **Turn off redirection for selected devices**.

### Turn off email message forwarding to a user account

You can temporarily stop the BlackBerry® Enterprise Server Express from forwarding email messages to a BlackBerry device (for example, if a user is out of a wireless coverage area and does not want to receive email messages during that time). When you turn off message forwarding for a user account, the user can send email messages from the BlackBerry device, but cannot receive email messages.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. Click **Edit user**.
5. In the **Messaging configuration** section, click **Default configuration**.
6. In the **Email services settings** section, on the **Redirect to BlackBerry device** drop-down list, click **No**.
7. Click **Continue to user information edit**.
8. Click **Save all**.

**After you finish:** The user can turn on message forwarding on the BlackBerry device manually.

### Turn off synchronization for email messages sent from a BlackBerry device

If you do not want a user’s email application to receive a copy of email messages that the user sends from the BlackBerry® device, you can turn off synchronization for email messages that the user sends from the BlackBerry device.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. In the search results, click the name of the user account.
5. Click **Edit user**.
6. In the **Messaging configuration** section, click **Default configuration**.
7. On the **Services** tab, in the **Email services settings** section, in the **Save copy in sent folder** drop-down list, click **No**.
8. Click **Continue to user information edit**.
9. Click **Save all**.
Turn off email message forwarding when a user connects a BlackBerry device to a computer

To manage network resources and control the number of email messages on a user's BlackBerry® device, you can turn off email message forwarding when a user's BlackBerry device is connected to the user's computer using a USB connection.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for a user account.
4. In the search results, click the name of the user account.
5. Click Edit user.
6. In the Messaging configuration section, click Default configuration.
7. In the Email services settings section, in the Redirect when in cradle drop-down list, click False.
8. Click Continue to user information edit.
9. Click Save all.

Managing the incoming message queue

The incoming message queue stores email messages from an organization's mail server until the BlackBerry® Enterprise Server Express processes the email messages and sends them to BlackBerry devices.

Delete email messages for user accounts from the incoming message queue

You can delete email messages for one or more user accounts from the incoming message queue. This permits you to manage the size of the queue and to manage user accounts that have a high number of pending email messages.

When you delete pending email messages from the incoming message queue, the BlackBerry® Enterprise Server Express does not send the email messages to the user’s BlackBerry device. The email messages remain in the email application on the user’s computer.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for one or more user accounts.
4. Click Manage multiple users.
5. Select the user accounts that you want to delete incoming messages for.
6. In the Pending data packets list, click Purge pending data packets for selected devices.

If wireless calendar synchronization for a user account is turned on, the BlackBerry Enterprise Server Express deletes pending meeting invitations or updates from the incoming message queue and sends them at a later time. The BlackBerry Enterprise Server Express does not delete IT policies and IT administration commands from the incoming message queue.
Managing wireless message reconciliation

The BlackBerry® Enterprise Server Express synchronizes email message status changes between BlackBerry devices and the email applications on users' computers. The BlackBerry Enterprise Server Express reconciles message moves, deletions, and indicators for read and unread messages every 30 minutes. By default, wireless message reconciliation is turned on.

To reduce high volumes of wireless network traffic, you can instruct users to limit how often they use the Reconcile Now menu item in the message list on their BlackBerry devices.

Turn off wireless message reconciliation for a BlackBerry Enterprise Server Express

You can turn off wireless message reconciliation to reduce wireless network traffic or to manage user accounts. If you turn off wireless message reconciliation, users can reconcile their email messages only by connecting their BlackBerry® devices to the BlackBerry® Desktop Manager or the BlackBerry® Web Desktop Manager.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Email.
2. Click the instance that you want to change.
3. Click Edit instance.
4. On the Messaging tab, in the Messaging options section, in the Wireless message reconciliation turn on drop-down list, click False.
5. Click Save all.

Turn on reconciliation for email messages that are hard deleted

Users can hard delete email messages in Microsoft® Outlook® and you can configure a BlackBerry® Enterprise Server Express to remove hard deleted messages from BlackBerry devices. If you turn on hard deletes reconciliation, the BlackBerry Messaging Agent also deletes email messages from devices when users archive or move email messages to personal folders in Microsoft Outlook. When you turn on reconciliation for hard deleted email messages, the BlackBerry Messaging Agent uses recurring message scans to detect hard deleted email messages on the messaging server, and then deletes the email messages from devices.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Email.
2. Click the instance that you want to change.
3. Click Edit instance.
4. On the Messaging tab, in the Messaging options section, in the Hard deletes reconciliation drop-down list, click True.
5. Click Save all.
6. On the computer that hosts the BlackBerry Dispatcher, restart the BlackBerry Dispatcher.

Related topics
Managing access to remote message data

Prevent a user from checking the availability of meeting participants on the BlackBerry device

By default, when a BlackBerry® device user creates a meeting request, the BlackBerry device user can check to see if a potential participant is available. You can turn this feature off if you want to minimize the resource impact of the BlackBerry® Enterprise Server Express on your organization’s messaging server.

Before you begin: If your organization’s environment includes Microsoft® Exchange 2007, configure the system public folder’s Schedule + Free Busy properties. For more information, visit www.microsoft.com to read article 397221(EXCHG.80) and article 691120(EXCHG.80).

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component View > Email.
2. Click the name of the BlackBerry Enterprise Server Express instance or BlackBerry Enterprise Server Express pair that you want to change.
3. Click Edit instance.
4. On the Messaging tab, in the Messaging Options section, change Free busy lookup turn on to False.
5. Click Save All.
6. Restart the BlackBerry Enterprise Server Express using one of the following methods:
   • If you want to change a BlackBerry Enterprise Server Express instance, on the Instance information tab, click Restart instance.
   • If you want to change a BlackBerry Enterprise Server Express pair, click one of the instances, and on the Instance information tab, click Restart instance. Repeat this step for the other instance in the pair.
   • In the Windows® Services, restart the BlackBerry Dispatcher.
7. Repeat step 2 to step 6 for each BlackBerry Enterprise Server Express instance that you want to turn off the feature for.

After you finish: To allow the user to check the availability of a potential meeting participant, in the Messaging Options section, change Free busy lookup turn on to True. Click Save all. Restart the BlackBerry Enterprise Server Express.

Prevent a user from searching for remote email messages using a device

You can prevent BlackBerry® device users from searching with their devices for remote email messages that are located on the messaging server.

Before you begin: You must turn on wireless email reconciliation.
1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Email.
2. Click the name of the BlackBerry Messaging Agent instance that you want to prevent a device user from searching for remote email messages.
3. Click Edit instance.
4. On the Messaging tab, in the Messaging options section, change Remote search turned on to False.
5. Click Save all.
6. On the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > BlackBerry Enterprise Server.
7. Click the name of the BlackBerry® Enterprise Server Express instance or BlackBerry Enterprise Server Express pair that is associated with the email instance that you want to prevent a device user from searching for remote email messages.
8. Restart the BlackBerry Enterprise Server Express using one of the following methods:
   • If you are changing a BlackBerry Enterprise Server Express instance, in the Status section, click Restart instance.
   • If you are changing a BlackBerry Enterprise Server Express pair, in the Status section for one of the instances in the pair, click Restart instance. Repeat this step for the other instance in the pair.
   • In the Windows® Services, restart the BlackBerry Dispatcher.
9. Repeat step 2 to step 8 for each BlackBerry Messaging Agent instance that you want to turn off remote searching for.

After you finish: To turn on the ability to search for remote messages, in the Messaging Options section, change Remote search turn on to True. Click Save all. Restart the BlackBerry Enterprise Server Express.

Restarting BlackBerry Enterprise Server Express components, 277

Managing email messages that contain HTML and rich content

The BlackBerry® Enterprise Server Express supports email messages that contain HTML and rich content on BlackBerry devices that are running BlackBerry® Device Software version 4.5 or later. You can turn off support for rich content and inline images in email messages. Users can configure the message settings on the BlackBerry devices. The settings that you define override the settings that users define.

View whether a user turned on support for email messages that contain HTML and rich content for a BlackBerry device

You can view whether a user turned on support for email messages with HTML and rich content and whether a user can download images to a BlackBerry® device automatically. A user can choose whether to turn off support on the BlackBerry device.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.

3. In the Search for users section, search for the user account that you assigned the BlackBerry device to.

4. In the search results, click the user name.

5. In the Messaging configuration section, click the Device configuration name.

6. In the Email Services Settings section, check if Rich content turned on and Automatic downloading of inline images turned on are configured to Yes.

**Turn off support for rich text formatting and inline images in email messages for users on a BlackBerry Enterprise Server Express**

You can prevent the BlackBerry® Enterprise Server Express from sending email messages that contain HTML and rich content to BlackBerry devices. When you turn off rich text formatting, the BlackBerry Enterprise Server Express sends all email messages in plain text format. You can also prevent the BlackBerry Enterprise Server Express from sending email messages that contain inline images to BlackBerry devices.

If you turn off support for rich content and inline images, you reduce the resource consumption on the computers that are running the messaging server, BlackBerry Attachment Service, and BlackBerry MDS Connection Service.

1. In the BlackBerry Administration Service, in the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component View > Email.

2. Click the name of the BlackBerry Enterprise Server Express instance or BlackBerry Enterprise Server Express pair that you want turn off rich text formatting or inline images for.

3. Click Edit instance.

4. On the Messaging tab, perform one or both of the following options:
   - To turn off rich text formatting, in the Messaging Options section, change Rich content turn on to False.
   - To prevent sending inline images, in the Messaging Options section, change Automatic downloading of inline images turn on to False.

5. Click Save All.

6. Restart the BlackBerry Enterprise Server Express using one of the following methods:
   - If you want to change a BlackBerry Enterprise Server Express instance, on the Instance information tab, click Restart instance.
   - If you want to change a BlackBerry Enterprise Server Express pair, click one of the instances, and on the Instance information tab, click Restart instance. Repeat this step for the other instance in the pair.
   - In the Windows® Services, restart the BlackBerry Dispatcher.

7. Repeat step 2 through step 6 for each BlackBerry Enterprise Server Express instance that you want to turn off rich text formatting or inline images for.
**Turn off support for rich text formatting in email messages using an IT policy rule**

You can change an IT policy rule to prevent the BlackBerry® Enterprise Server Express from sending email messages that contain HTML and rich content to users. If you turn off support for rich text formatting, the BlackBerry Enterprise Server Express sends all email messages in plain text format.

If you turn off rich content formatting, you reduce resource consumption on the computers that host the messaging server, BlackBerry Attachment Service, and BlackBerry MDS Connection Service.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **Policy**.
2. Click **Manage IT policies**.
3. Click the name of the IT policy that you want to change.
4. Click **Edit IT policy**.
5. On the **Email Messaging** tab, change **Disable Rich Content Email** to **Yes**.
6. Click **Save all**.
7. Resend the updated IT policy to the BlackBerry devices.

**Synchronizing folders on the BlackBerry device**

**Control which published public contact folders a user can synchronize to a BlackBerry device**

By default, a user can synchronize contacts from all of the published public contact folders on the messaging server with the contact lists on a BlackBerry® device. To help manage network resources, you can select the published public contact folders that a user can synchronize.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for a user account.
4. In the search results, click the display name for the user account.
5. Click **Edit user**.
6. In the **Messaging configuration** section, click **Device configuration**.
7. On the **Email** tab, in the **Published public contact folders** section, select the check box beside each public address book that you that you want to permit the user to synchronize with the contact lists on the BlackBerry device.
8. Click **Continue to user information edit**.
9. Click **Save all**.
Control which personal contact subfolders a user can synchronize to a BlackBerry device

By default, a user can synchronize all of the personal contact subfolders on the messaging server with the contact lists on the BlackBerry® device. To help manage network resources, you can select the personal contact subfolders that a user can synchronize.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for a user account.
4. Click the display name for the user account.
5. In the Messaging Configuration section, click Device configuration.
6. Click Edit User.
7. Click Continue to user information edit.
8. Click Save all.

Control which personal mail folders a user can synchronize with a BlackBerry device

To help manage network resources, you can select the personal mail folders that a user can synchronize with a BlackBerry® device.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for a user account.
4. Click the display name for a user account.
5. In the Messaging Configuration section, click Device configuration name.
6. Click Edit User.
7. In the Email tab, in the Redirection Folders section, click Selected Folders.
8. Select the folders that you want to permit the user to synchronize with the contact lists on the BlackBerry device.
9. Click Continue to user information edit.
10. Click Save all.

After you finish: To permit the user to select which folders that the user can synchronize, instruct the user to select folders using the BlackBerry® Desktop Manager or BlackBerry® Web Desktop Manager.
Configuring access to documents on remote file systems

By default, the BlackBerry® MDS Connection Service can search your organization's Windows® network for any documents that users might want to access from the BlackBerry devices.

In BlackBerry® Enterprise Server Express version 5.0 SP1 or later and BlackBerry® Device Software version 5.0 or later, if you want to permit users to access specific documents that are not located on the Windows network (for example, documents that are located on a Linux® network) from BlackBerry devices, you can configure the BlackBerry MDS Connection Service to search the remote file system where the documents are located and provide authentication credentials to users or the BlackBerry MDS Connection Service. For remote file systems that require authentication, you can provide the credentials to the BlackBerry MDS Connection Service so that users do not need to provide the credentials when they access the documents.

To configure the BlackBerry MDS Connection Service to search the remote file system, you must define how the BlackBerry MDS Connection Service communicates with the remote file system, add the communication information to a BlackBerry MDS Connection Service configuration set, and assign the configuration set to one or more BlackBerry MDS Connection Service instances.

Configure the BlackBerry MDS Connection Service to communicate with a remote file system

To permit the BlackBerry® MDS Connection Service to communicate with a remote file system, you specify the URL for the remote file system and the type of access (Linux® or Windows®) that the domain of the remote file system supports. You can also provide credentials for the domain so that BlackBerry device users do not need to provide the credentials when they access the documents.

Before you begin: If the file system requires the BlackBerry MDS Connection Service to authenticate to the remote file system, create an account on the remote file system that the BlackBerry MDS Connection Service can use to authenticate when the BlackBerry MDS Connection Service receives requests for documents.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. Click MDS Connection Service.
3. Click Edit component.
4. On the File tab, in the Name field, type a name for the communication method that you want to configure.
5. In the Service URL field, type the UNC path to the remote file system using the following format: /<computer_name><fs_path>, where <computer_name> is the FQDN or IP address of a computer or the virtual view of the shared folders (for example, the DFS Namespace in Windows Server®) and <fs_path> is the optional directory path that can include a specific filename. When you type the UNC path, you can use an asterisk (*) to represent a sequence of arbitrary characters (including blank spaces), a question mark (?) to represent a single arbitrary character, and a backslash (\) to represent an escape character. You cannot type a URL that can search all of the computers in a Windows domain.
6. If the file system requires the BlackBerry MDS Connection Service to authenticate with the remote file system, perform the following actions:
• In the **User name** field, type the name of the account that you want the BlackBerry MDS Connection Service to use to authenticate to the remote file system.
• In the **Authentication domain** field, type the domain for the user account.
• In the **Password** and **Confirm Password** fields, type the password for the user account.
• In the **Network provider** drop-down list, click the network provider that BlackBerry MDS Connection Service should use to access the file system.

7. Click **Save all**.

**Examples for step 5**

To access a specific file on a computer, you can type `/test.company.net/docs/presentation.ppt`. To access the shared folders on a specific computer, you can type `/10.10.10.10`. To access all of the content on the computers in a specific domain, you can type `*.test.company.net/*`.

**After you finish:** Add communication information to a BlackBerry MDS Connection Service configuration set.

### Add communication information to a BlackBerry MDS Connection Service configuration set

A BlackBerry® MDS Connection Service configuration set is a set of service configurations that the BlackBerry MDS Connection Service instances in your organization can use to communicate with a remote file system, an LDAP server, a DSML server, a CRL server, an OCSP server, or a certification authority. You must add the communication information that the BlackBerry MDS Connection Service requires to communicate with servers to a configuration set so that a BlackBerry MDS Connection Service instance can communicate with the servers after you assign the configuration set to the instance.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view**.
2. Click **MDS Connection Service**.
3. Click **Edit component**.
4. On the **Configuration Sets** tab, perform one of the following actions:
   • To create a configuration set, in the **Configuration set name** section, type a name and description for the configuration set.
   • To change an existing configuration set, click the **Edit** icon.
5. In the **Priority Service group** drop-down list, click the name of the service that you want to configure the communication method for.
6. In the **Service (Name : Description)** drop-down list, click the name of the communication method that you want to configure.
7. Click the **Add** icon.
8. To specify the communication method that the BlackBerry MDS Connection Service should try to connect to the server with first, click the **Up** and **Down** arrows. The BlackBerry MDS Connection Service resolves conflicts by applying communication methods in the order that you specify. The order of that you specify for LDAP, DSML,
or file communication applies to each communication method separately. The order permits the BlackBerry MDS Connection Service to resolve conflicts between domains if you created multiple communication methods for a specific URL.

9. Perform one of the following actions:
   • To add a new configuration set, click the **Add** icon.
   • To update an existing configuration set, click the **Update** icon.

10. Click **Save all**.

After you finish:
   • To confirm your changes, click the **View** icon.
   • Assign the configuration set to a BlackBerry MDS Connection Service.

**Assign a BlackBerry MDS Connection Service configuration set to a BlackBerry MDS Connection Service instance**

You can assign a BlackBerry® MDS Connection Service configuration set to a BlackBerry MDS Connection Service instance so that BlackBerry device users can access documents on remote file systems from devices, the BlackBerry MDS Connection Service can search for certificates and check for the status of the certificates from LDAP servers, DSML servers, CRL servers, or OCSP servers, and the BlackBerry MDS Connection Service can send certificate requests to a certificate authority.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view**.
2. Click **MDS Connection Service**.
3. Click the instance that you want to change.
4. Click **Edit instance**.
5. On the **Component Configuration Sets** tab, in the **Available component configuration sets** section, in the **Service configuration sets** drop-down list, click the configuration set that you want to assign to the BlackBerry MDS Connection Service instance.
6. Click **Save all**.
7. To restart the BlackBerry MDS Connection Service instance, on the **Instance information** tab, in the **Status** list, click **Restart instance**.
8. To assign the BlackBerry MDS Connection Service configuration set to another BlackBerry MDS Connection Service instance, repeat steps 3 to 7.

Managing signatures and disclaimers in email messages

Add a signature to email messages that a user sends from a BlackBerry device

To enforce a signature format policy in your organization, you can add a standard signature to the email messages that users send from their BlackBerry® devices.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Click Manage instance.
4. In the search results, click the name of the user account.
5. Click Edit user.
6. In the Messaging configuration section, click Default configuration.
7. On the Email tab, in the Mail options section, in the Auto signature field, type the signature that you want to appear in the email messages that the user sends from the BlackBerry device.
8. Click Continue to user information edit.
9. Click Save all.

Add a disclaimer to email messages that users send from BlackBerry devices

You can add a disclaimer to email messages that users send from their BlackBerry® devices. Users cannot change the disclaimers that you define.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry solution topology > BlackBerry Domain > Component view > Email.
2. Click the instance that you want to change.
3. Click Edit instance.
4. On the Messaging tab, in the Messaging options section, perform one of the following actions:
   • To add a disclaimer before the body of the message, in the Prepended disclaimer text field, type the disclaimer.
   • To add a disclaimer after the user signature, in the Appended disclaimer text field, type the disclaimer.
5. Repeat steps 2 to 4 for each instance that you want to create a disclaimer for.
6. Click Save all.
Add a disclaimer to email messages that a user sends from a BlackBerry device

You can add a disclaimer to all email messages that are sent by a user that is different from the disclaimer that you added for all users on a BlackBerry® Enterprise Server Express. A user cannot change the disclaimer that you define.

1. In the BlackBerry Administration Service, on the **BlackBerry solution management** menu, expand **User**.
2. Click **Manage users**.
3. Search for the user account.
4. In the search results, click the name of the user account.
5. Click **Edit user**.
6. In the **Messaging configuration** section, click **Default configuration**.
7. On the **Email** tab, in the **Mail options** section, perform one of the following actions:
   • To add a disclaimer before the body of the message, in the **Prepended disclaimer text** field, type the disclaimer.
   • To add a disclaimer after the user signature, in the **Appended disclaimer text** field, type the disclaimer.
8. Click **Continue to user information edit**.
9. Click **Save all**.

Specify conflict rules for disclaimers

If you associate multiple disclaimers with a user account, you can specify conflict rules for the disclaimer to define the order in which the BlackBerry® Enterprise Server Express applies the disclaimers. For example, you can configure the BlackBerry Enterprise Server Express to display the user disclaimer first in the email message, followed by the BlackBerry Enterprise Server Express disclaimer.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry solution topology > BlackBerry Domain > Component view > Email**.
2. Click the instance that you want to change.
3. Click **Edit instance**.
4. On the **Messaging** tab, in the **Messaging options** section, perform one of the following actions:
   • To specify the conflict rules for disclaimers that appear before the body of a message, in the **Messaging options** section, in the **Prepended disclaimer conflict rule** drop-down list, click a conflict rule.
   • To specify the conflict rules for disclaimers that appear after the user signature, in the **Messaging options** section, in the **Appended disclaimer conflict rule** drop-down list, click a conflict rule.
5. Click **Save all**.

Turn off disclaimers for email messages

1. In the BlackBerry® Administration Service, on the **Servers and components** menu, expand **BlackBerry solution topology > BlackBerry Domain > Component view > Email**.
Monitor email messages that users send from BlackBerry devices

To monitor the content of email messages that users send from their BlackBerry® devices, you can BCC specific email addresses on the email messages. You can BCC the email addresses of all of the users that you assign to a BlackBerry Messaging Agent. When you automatically BCC email addresses on messages, the BCC field of the original message is populated, so the message sender is aware that the message is BCCed.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Email.
2. Click the instance that you want to change.
3. Click Edit instance.
4. On the Messaging tab, in the Auto BCC email address section, perform one of the following tasks:

<table>
<thead>
<tr>
<th>Task</th>
<th>Steps</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add email addresses manually.</td>
<td>In the Auto BCC email address field, type the email addresses.</td>
</tr>
</tbody>
</table>
| Add email addresses from the address book. | a. Click Select from mail address list.  
b. Search for one or more users.  
c. In the search results, select one or more user accounts.  
d. Click Continue. |

5. Click the Add icon.
6. Repeat steps 4 and 5 for each email address that you want to add.
7. Click Save all.
Sending notification messages to users

You can send a notification message to a user, to all of the users associated with a BlackBerry® Enterprise Server Express, or to all of the users in the BlackBerry Domain. You can send notifications as email messages or PIN messages. PIN messages are appropriate for informing users about messaging server outages because BlackBerry devices send and receive PIN messages directly, without using the messaging server. BlackBerry devices do not apply filters to PIN messages.

When users reply to a notification email message, their BlackBerry devices send the replies to the Windows® account that you used to install the BlackBerry Enterprise Server Express (for example, besadmin).

Send a notification message to all users in a BlackBerry Domain

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry solution topology.
2. Click BlackBerry Domain.
3. On the Domain information tab, click Send message to users.
4. Type the message that you want to send.
5. Click Send message.

Send a notification message to all users on a BlackBerry Enterprise Server Express

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > BlackBerry Enterprise Server.
2. Click an instance.
3. Under Manage BlackBerry Enterprise Server users, click Send message to users.
4. Type the message that you want to send.
5. Click Send message.

Send a notification message to group members

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand Group.
2. Click Manage groups.
3. Click a group.
4. Click Send message to users in group.
5. Type the message that you want to send.
6. Click Send message.
Send a notification message to a user

1. In the BlackBerry® Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for a user account.
4. In the search results, click the name of a user account.
5. Click Send message to user.
6. Type the message that you want to send.
7. Click Send message.

Change the size of the message state database

The BlackBerry® Messaging Agent uses a message state database to manage the mapping between email messages on BlackBerry devices and email messages on the Microsoft® Exchange Server. The size of the message state database defines how many recent email messages are kept in this mapping for each user. Increasing the size of the message state database might decrease the message load on the Microsoft Exchange Server because the BlackBerry Messaging Agent can use the local message state database to search for messages instead of communicating with the Microsoft Exchange Server. Increasing the size of the message state database also increases how much memory the BlackBerry Messaging Agent uses.

If you change the size of the message state database, your organization's environment might experience a serious performance impact.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Email.
2. Click the instance that you want to change.
3. Click Edit instance.
4. On the Messaging tab, in the Performance section, in the Message state database size field, type a value between 0 and 1000, that specifies the number of messages that the BlackBerry® Enterprise Server Express keeps in the mapping for each user.
   The default value is 100 messages.
5. Click Save all.

How the BlackBerry Attachment Connector communicates with BlackBerry Attachment Service instances

When a user sends a request to view an email message attachment on a BlackBerry® device, the BlackBerry device sends a request to the BlackBerry® Enterprise Server Express to convert the attachment. The BlackBerry Enterprise Server Express uses a BlackBerry Attachment Connector to send the attachment data to a BlackBerry Attachment
Service, which processes the request and returns the attachment data to the BlackBerry Attachment Connector. The BlackBerry Enterprise Server Express requests the attachment data from the BlackBerry Attachment Connector and sends the attachment data to the user's BlackBerry device.

By associating multiple BlackBerry Attachment Service instances with a single BlackBerry Attachment Connector, you can create a BlackBerry Attachment Service pool. You can configure different BlackBerry Attachment Service instances as dedicated servers for processing specific file formats. For example, you can create a BlackBerry Attachment Service pool that contains three BlackBerry Attachment Service instances, where one instance processes email message attachments that are in audio file formats, one instance processes email message attachments that are in image file formats, and one instance processes email message attachments that are in all other file formats.

You can change how a BlackBerry Attachment Connector processes attachment requests that it cannot deliver to a BlackBerry Attachment Service, and you can change how a BlackBerry Attachment Connector restores a lost connection to a BlackBerry Attachment Service.

**Change how a BlackBerry Attachment Connector retries sending requests to a BlackBerry Attachment Service**

The BlackBerry® Attachment Connector sends requests to view attachments from users' BlackBerry devices to a BlackBerry Attachment Service. You can change how a BlackBerry Attachment Connector processes attachment requests that it cannot deliver to a BlackBerry Attachment Service.

Depending on the number of users in your organization's environment, if you change the BlackBerry Attachment Connector settings, your organization’s environment might experience a performance impact.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > Attachment > Connector**.
2. Click the instance that you want to change.
3. Click **Edit instance**.
4. In the **General** section, in the **Minimum wait for retry per request** field, type the amount of time, in milliseconds, that the BlackBerry Attachment Connector waits before it resends a request that is not delivered to a BlackBerry Attachment Service.
   The default value is 1000 milliseconds.
5. In the **Maximum retries per request** field, type the maximum number of times that the BlackBerry Attachment Connector tries to resend a request that is not delivered to a BlackBerry Attachment Service.
   The default value is 10.
6. Click **Save all**.
Change how a BlackBerry Attachment Connector restores a lost connection to a BlackBerry Attachment Service

Based on the number of users in your organization's environment, if you change the BlackBerry® Attachment Connector settings, your organization's environment might experience a performance impact.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > Attachment > Connector**.
2. Click the instance that you want to change.
3. Click **Edit instance**.
4. In the **General** section, in the **Minimum wait to attempt restore of lost connection** field, type the amount of time, in milliseconds, that the BlackBerry Attachment Connector waits before it tries to restore a lost connection to a BlackBerry Attachment Service.
   The default value is 1000 milliseconds.
5. Click **Save all**.

### Changing how a BlackBerry Attachment Service converts attachments

If the BlackBerry® Enterprise Server Express receives requests from BlackBerry device users to view email message attachments, the BlackBerry Attachment Service converts the attachments into a DOM and caches the DOM locally. The BlackBerry Attachment Service accesses the DOM to process the requests. If users send requests to view the same message attachment again, the BlackBerry Attachment Service accesses the same DOM to process the requests. The BlackBerry Attachment Service keeps all of the cached data in memory only and never caches the original documents.

Each attachment conversion process allocates memory when it starts, uses memory on conversion, and caches the attachment DOM locally on the computer that hosts the BlackBerry Attachment Service. A larger cache size means that more memory is allocated to each running conversion process. The maximum file size of attachments impacts the amount of cached memory that the BlackBerry Attachment Service uses.

By default, the BlackBerry Attachment Service does not limit the file size of an attachment that is embedded in an email message or retrieved using a link. The BlackBerry Enterprise Server Express sends data to BlackBerry devices over the wireless network in packets that are no larger than 64 KB, and it can send an unlimited number of packets to BlackBerry devices.

You can change how the BlackBerry Attachment Service converts attachments by specifying a maximum file size for attachments that users can receive and controlling how the BlackBerry Attachment Service retrieves, distills, and converts attachment data.

### Change how a BlackBerry Attachment Service converts attachments

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Attachment > Server.
2. Click the instance that you want to change.
3. Click Edit instance.
4. In the **General** section, configure the BlackBerry Attachment Service optimization settings.

5. Click **Save**.

### BlackBerry Attachment Service optimization settings

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
<th>Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Submit port</td>
<td>This setting specifies the TCP/IP port number that a BlackBerry® Attachment Service uses to listen for and receive attachment conversion requests in a predefined XML/binary protocol. The default value is 1900.</td>
<td>—</td>
</tr>
<tr>
<td>Result port</td>
<td>This setting specifies the TCP/IP port number that a BlackBerry Attachment Service returns attachment conversion results to in a predefined XML/binary protocol. The default value is 2000.</td>
<td>—</td>
</tr>
<tr>
<td>Configuration port</td>
<td>This setting specifies the TCP/IP port number that you can use with an XML protocol to configure or obtain configuration information for a BlackBerry Attachment Service, including version information, the number of conversion processes, and the number of cached documents. The default value is 1999.</td>
<td>—</td>
</tr>
<tr>
<td>Document cache size</td>
<td>This setting specifies the maximum number of converted documents that can be located in the document cache (as DOM) for a single conversion process. The default value is 32.</td>
<td>1 through 128</td>
</tr>
<tr>
<td>Maximum number of processes</td>
<td>This setting specifies the number of conversion requests that the BlackBerry Attachment Service can process at the same time. When you specify this value, consider the amount of available memory and the competing services on the computer that hosts the BlackBerry Attachment Service. The default value is 4.</td>
<td>1 through 64</td>
</tr>
<tr>
<td>Process recycle time (minutes)</td>
<td>This setting specifies the length of time that an application conversion process can reuse system resources to reclaim space and prevent failed processes from occupying memory resources. The default value is 25 minutes.</td>
<td>5 to 60 minutes</td>
</tr>
<tr>
<td>Maximum conversion threads</td>
<td>This setting specifies the number of documents that the BlackBerry Attachment Service can convert at the same time in a single conversion process. You can use this setting with the Server busy time setting to control thread saturation and manage the BlackBerry Attachment Service workload. The default value is 4.</td>
<td>2 to 32</td>
</tr>
</tbody>
</table>
### Setting Description Range

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
<th>Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server busy time (seconds)</td>
<td>This setting specifies the threshold at which the BlackBerry Attachment Service does not accept new conversion requests. The default value is 120 seconds.</td>
<td>60 to 270 seconds</td>
</tr>
<tr>
<td>Allow remote services</td>
<td>This setting specifies whether you prevent or permit remote TCP/IP connections to the BlackBerry Attachment Service. The default value is Yes.</td>
<td>—</td>
</tr>
<tr>
<td>Maximum archive (ZIP) level</td>
<td>This setting specifies how many levels of zipped files that the BlackBerry Attachment Service can process. For example, if you set this field to 2, the BlackBerry Attachment Service processes the .zip files within a .zip file. If you set this field to 1, the BlackBerry Attachment Service only lists the contents of a .zip file. The default value is 1.</td>
<td>1 to 9</td>
</tr>
</tbody>
</table>

---

### Change the maximum file size for attachments that users can receive

The BlackBerry® Attachment Service uses memory during the attachment conversion process. If users try to open large or complex attachments (for example, .pdf files or ASCII text files that are larger than 2 MB) or multiple attachments at the same time, you might want to limit the file size for attachments.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > Attachment > Server**.
2. Click the instance that you want to change.
3. Click **Edit instance**.
4. In the **Distiller** section, in the **Attachment size (KB)** column, type a value, in KB, for the distillers that you want to change. If necessary, configure the settings in the **Additional data** column.
5. Click **Save**.

**After you finish:** Restart the BlackBerry Attachment Service.

### Suggested file sizes for attachments

<table>
<thead>
<tr>
<th>File format</th>
<th>Suggested size</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adobe® Acrobat® versions 1.1, 1.2, 1.3, and 1.4</td>
<td>less than 2000 KB</td>
</tr>
<tr>
<td>ASCII text</td>
<td>less than 100 KB</td>
</tr>
<tr>
<td>audio</td>
<td>less than 2000 KB</td>
</tr>
<tr>
<td>Corel® WordPerfect® versions 6.0, 7.0, 8.0, 9.0 (2000), and 10.0</td>
<td>less than 2000 KB</td>
</tr>
<tr>
<td>HTML</td>
<td>less than 100 KB</td>
</tr>
<tr>
<td>images</td>
<td>less than 2000 KB</td>
</tr>
<tr>
<td>Microsoft® Excel® versions 97, 2000, 2003, 2007, and XP</td>
<td>less than 2000 KB</td>
</tr>
<tr>
<td>Microsoft® PowerPoint® versions 97, 2000, 2003, 2007, and XP</td>
<td>less than 2000 KB</td>
</tr>
</tbody>
</table>
## Turn off support for an attachment file format for a BlackBerry Attachment Service

The BlackBerry® Attachment Service uses distillers to convert attachments that are in supported file formats so that users can view the attachments on their BlackBerry devices. By default, all supported distillers are turned on. You can turn off a distiller to prevent users from viewing attachments that are in a specific file format. For example, if you turn off the .pdf distiller, users cannot view .pdf attachments on their BlackBerry devices.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > Attachment > Server**.
2. Click the instance that you want to change.
3. Click **Edit instance**.
4. In the **Distiller** section, in the **Allowed** column, specify which distillers are supported for the instance.
5. Click **Save all**.

**After you finish:** Restart the BlackBerry Attachment Service.

## Add support for an additional attachment file format to a BlackBerry Attachment Service

You can configure a BlackBerry® Attachment Service to support additional file formats. If your organization's messaging server connects to a document management system that renames file format extensions, you must add the necessary extensions to the list of supported file formats for all BlackBerry Attachment Service instances.

If your organization uses new common extensions for a file format that there is a distiller available for on a BlackBerry Attachment Service, you must add those extensions to the BlackBerry Attachment Connector. For example, if users send .rtf files as .wav files, you must verify that the BlackBerry Attachment Connector supports .wav files and that the appropriate distiller is turned on for the BlackBerry Attachment Service instances.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view > Attachment > Connector**.
2. Click the BlackBerry Attachment Connector instance that is associated with the BlackBerry Attachment Service that you want to change.
3. Click **Edit instance**.

4. On the **Supported Attachment Server instances** tab, click the **Edit** icon for the BlackBerry Attachment Service that you want to support additional file formats.

5. In the field at the bottom of the **Extensions** list, type the extension of the file format that you want to add.

6. Click the **Add** icon.

7. Repeat steps 4 to 6 for each BlackBerry Attachment Service that you want to add additional file formats to.

8. Click **Save all**.

### Changing how the BlackBerry Messaging Agent reconciles attachments to the messaging server

The BlackBerry® Messaging Agent receives message attachments from supported BlackBerry devices and reconciles the attachments to the messaging server. The BlackBerry Attachment Service does not convert the attachments.

The entries in the CMIME service book on BlackBerry devices indicate whether the BlackBerry® Enterprise Server Express supports attachments that users send from their BlackBerry devices. Users must have BlackBerry® Desktop Software version 4.2 or later installed on their computers to make sure that these service book entries remain on their BlackBerry devices during service book updates over a physical connection to a computer that is running the BlackBerry Desktop Software.

By default, the BlackBerry Messaging Agent limits the file size of attachments that it can receive from a BlackBerry device to a maximum of 3 MB. If the BlackBerry Messaging Agent receives more than one attachment at a time, it limits the total file size of all of the attachments to a maximum of 5 MB.

Data that a BlackBerry device and the messaging server send each other over the wireless network must be in packets that are no larger than 64 KB. If a BlackBerry device sends an attachment that is larger than a single packet, the BlackBerry device divides the attachment into multiple packets. The BlackBerry Messaging Agent caches all of the packets and sends the attachment to the messaging server after it receives the last packet.

You can optimize the amount of memory and the number of transactions that the BlackBerry Messaging Agent uses when it receives attachments by changing the maximum file size of attachments or preventing users from sending large attachments.

Users with BlackBerry devices that are running BlackBerry® Device Software version 4.5 or later can download attachments in any native format to their BlackBerry devices. Users can open and make changes to native file formats using an appropriate third-party application on their BlackBerry devices. Users might be able to open specific file formats using the media application on their BlackBerry devices.

To manage network resources in your organization’s environment, you can change the maximum file size of attachments that users can download to their BlackBerry devices.
Change the maximum file size for attachments that users can send

By default, the maximum file size of a single attachment that users can send is 3072 KB, and the maximum file size of multiple attachments that BlackBerry® devices can send in a single email message is 5120 KB.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Email.
2. Click the instance that you want to change.
3. Click Edit instance.
4. On the Messaging tab, in the Messaging options section, perform any of the following actions:
   - To change the maximum file size for a single attachment that BlackBerry devices can send, in the Maximum single attachment upload size (KB) field, type a number that is between 1 and 3072 KB.
   - To change the maximum file size of multiple attachments that BlackBerry devices can send at one time, in the Maximum multiple attachment upload size (KB) field, type a number that is between 1 and 5120 KB that is greater than the value in the Maximum single attachment upload size (KB) field.
5. Click Save all.

Related topics
Restarting BlackBerry Enterprise Server Express components, 277

Prevent users from sending large attachments

If you prevent users from sending large attachments, they can only send specific attachments, such as certificates and contact list entries, that are less than a single packet.

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Email.
2. Click the instance that you want to change.
3. Click Edit instance.
4. On the Messaging tab, in the Messaging options section, in the Maximum single attachment upload size (KB) field, type 0.
5. Click Save all.

Change the maximum file size of attachments that users can download

On BlackBerry® devices that are running specific versions of the BlackBerry® Device Software, users can download attachments in native formats (for example, .txt for a text file) to their BlackBerry devices. Users can open and make changes to the files that they download using an appropriate third-party application on their BlackBerry devices. A user might be able to open specific file formats using the media application on the BlackBerry device.

The default maximum file size of attachments that users can download to their BlackBerry devices is 3072 KB (3 MB).

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Email.
2. Click the instance that you want to change.

3. Click **Edit instance**.

4. On the **Messaging** tab, in the **Messaging options** section, in the **Maximum single attachment download size (KB)** field, type a number, in KB, that is between 0 and 10240 (10 MB). If you type **0**, users cannot download attachments in a native format to their BlackBerry devices.

5. Click **Save all**.
Managing calendars

Configuring the BlackBerry Enterprise Server Express to use Microsoft Exchange Web Services or MAPI and CDO libraries

By default, the BlackBerry® Enterprise Server Express uses Microsoft® Exchange Web Services to manage calendars on BlackBerry devices. The BlackBerry Enterprise Server Express monitors periodically whether a user account can use Microsoft Exchange Web Services. If a user account cannot use Microsoft Exchange Web Services, for example, because of a configuration error in Microsoft Exchange, the BlackBerry Enterprise Server Express uses MAPI and CDO libraries to manage calendars on devices. A BlackBerry Messaging Agent on the BlackBerry Enterprise Server Express can include a dynamic mix of user accounts that use Microsoft Exchange Web Services and user accounts that use MAPI and CDO libraries.

You can use the BlackBerry® Enterprise Trait Tool to configure the BlackBerry Enterprise Server Express to use only Microsoft Exchange Web Services or only MAPI and CDO libraries to manage calendars on devices. You can configure a specific BlackBerry Messaging Agent instance, a specific BlackBerry Enterprise Server Express, or all BlackBerry Enterprise Server Express instances that share one BlackBerry Configuration Database.

To use Microsoft Exchange Web Services, your organization's environment must include Microsoft® Exchange 2007 SP1 or later.

Prerequisites: Configuring the BlackBerry Enterprise Server Express to use Microsoft Exchange Web Services

- Install an SSL certificate on a BlackBerry® Enterprise Server Express so that the BlackBerry Enterprise Server Express can communicate with Microsoft® Exchange Web Services. You must export the SSL certificate from the client access server for Microsoft® Exchange and import the SSL certificate to the BlackBerry Enterprise Server Express. The BlackBerry Enterprise Server Express supports a self-signed security certificate or a certificate that a certificate authority issues. For more information about installing an SSL certificate, visit support.microsoft.com to read article KB 962624.

- Assign IIS permissions to a BlackBerry Enterprise Server Express administrator account on the Microsoft® Exchange Server that hosts the client access server role. For more information about assigning IIS permissions, visit support.microsoft.com to read article KB 816117.
Configure the BlackBerry Enterprise Server Express to use Microsoft Exchange Web Services

You can configure the BlackBerry® Enterprise Server Express to use only Microsoft® Exchange Web Services to manage calendars on BlackBerry devices.

1. Copy the BlackBerry Enterprise Server Express installation files to the computer that hosts the BlackBerry Enterprise Server Express.
2. Extract the contents to a folder on the computer.
3. At a command prompt, navigate to <extracted_folder>\tools.
4. Perform one of the following actions:
   - To configure a specific BlackBerry Messaging Agent on a specific BlackBerry Enterprise Server Express to use Microsoft Exchange Web Services, type `traittool-server <server_name>-agent <agent_id>-trait EWSEnable-set true`, where `<server_name>` is the name of the BlackBerry Enterprise Server Express and `<agent_id>` is the ID for the BlackBerry Messaging Agent.
   - To configure all BlackBerry Messaging Agent instances on a specific BlackBerry Enterprise Server Express to use Microsoft Exchange Web Services, type `traittool-server <server_name>-trait EWSEnable-set true`, where `<server_name>` is the name of the BlackBerry Enterprise Server Express.
   - To configure all BlackBerry Messaging Agent instances on all BlackBerry Enterprise Server Express instances to use Microsoft Exchange Web Services, type `traittool-global -trait EWSEnable-set true`.
5. Restart the BlackBerry Messaging Agent instances that you made changes to.

After you finish:

In the logs folder verify that the file named `<server_name>_CALH_<agent_id>_<date>.txt` appears. In the file name, `<server_name>` is the name of the BlackBerry Enterprise Server Express, `<agent_id>` is the ID of the BlackBerry Messaging Agent, and `<date>` is the date that you configured the BlackBerry Enterprise Server Express to use Microsoft Exchange Web Services.

Related topics
Restarting BlackBerry Enterprise Server Express components, 277

Configure the BlackBerry Enterprise Server Express to use MAPI and CDO libraries

You can configure the BlackBerry® Enterprise Server Express to use only MAPI and CDO libraries to manage calendars on BlackBerry devices.

1. Copy the BlackBerry Enterprise Server Express installation files to the computer that hosts the BlackBerry Enterprise Server Express.
2. Extract the contents to a folder on the computer.
3. At a command prompt, navigate to `<extracted_folder>\tools`.
4. Perform one of the following actions:
To configure a specific BlackBerry Messaging Agent on a specific BlackBerry Enterprise Server Express to use MAPI and CDO libraries, type `traittool -server <server_name> -agent <agent_id> -trait EWSEnable -set false`, where `<server_name>` is the name of the BlackBerry Enterprise Server Express and `<agent_id>` is the ID for the BlackBerry Messaging Agent.

To configure all BlackBerry Messaging Agent instances on a specific BlackBerry Enterprise Server Express to use MAPI and CDP libraries, type `traittool -server <server_name> -trait EWSEnable -set false`, where `<server_name>` is the name of the BlackBerry Enterprise Server Express.

To configure all BlackBerry Messaging Agent instances on all BlackBerry Enterprise Server Express instances to use MAPI and CDO libraries, type `traittool -global -trait EWSEnable -set false`.

5. Restart the BlackBerry Messaging Agent instances that you made changes to.

Restarting BlackBerry Enterprise Server Express components, 277

Configure the BlackBerry Messaging Agent instances to use a web address for a specific Microsoft Autodiscover service

You can configure the BlackBerry® Messaging Agent instances to use a specific Microsoft® Autodiscover service to search for a client access server for Microsoft® Exchange by specifying the web address for the service. You can use the web address of the service if the default Microsoft Autodiscover service does not find an appropriate client access server for Microsoft Exchange or if you want to use a different client access server for Microsoft Exchange.

1. Copy the BlackBerry® Enterprise Server Express installation files to the computer that hosts the BlackBerry Enterprise Server Express.
2. Extract the contents to a folder on the computer.
3. At the command prompt, navigate to `<extracted_folder>	ools`.
4. Perform one of the following actions:
   - To configure all BlackBerry Messaging Agent instances on a specific BlackBerry Enterprise Server Express to use a web address for a specific Microsoft Autodiscover service, type `traittool -server <server_name> -trait EWSSCPURL -set <web_address>`, where `<server_name>` is the name of the BlackBerry Enterprise Server Express and `<web_address>` is the web address of the Microsoft Autodiscover service.
   - To configure all BlackBerry Messaging Agent instances on all BlackBerry Enterprise Server Express instances to use a web address for a specific Microsoft Autodiscover service, type `traittool -global -trait EWSSCPURL -set <web_address>`, where `<web_address>` is the web address of the Microsoft Autodiscover service.

5. Restart the BlackBerry Messaging Agent instances that you made changes to.

Example:

To specify a web address for a specific Microsoft Autodiscover service that all BlackBerry Messaging Agent instances on all BlackBerry Enterprise Server Express instances will use, type `traittool -global -trait EWSSCPURL -set https://server.company.com/Autodiscover/Autodiscover.xml`
Configure the BlackBerry Messaging Agent instances to use a specific web address for a client access server for Microsoft Exchange

You can configure the BlackBerry® Messaging Agent instances to use a specific client access server for Microsoft® Exchange to connect to Microsoft Exchange Web Services. You can use the specific web address for the client access server if you do not have access to the Microsoft® Autodiscover service or if you do not want to use the client access server for Microsoft Exchange that the Microsoft Autodiscover service selects. If you configure the BlackBerry Messaging Agent instances to use the web address for the client access server, the BlackBerry Messaging Agent instances do not use the Microsoft Autodiscover service to search for a client access server for Microsoft Exchange.

1. Copy the BlackBerry® Enterprise Server Express installation files to the computer that hosts the BlackBerry Enterprise Server Express.
2. Extract the contents to a folder on the computer.
3. At the command prompt, navigate to `<extracted_folder>\tools`.
4. Perform one of the following actions:
   - To configure a specific BlackBerry Enterprise Server Express to use a specific web address for a client access server for Microsoft Exchange, type `traittool -server <server_name> -trait EWSCASURL -set <web_address>`, where `<server_name>` is the name of the BlackBerry Enterprise Server Express and `<web_address>` is the web address for the Microsoft Exchange client access server.
   - To configure all BlackBerry Messaging Agent instances on all BlackBerry Enterprise Server Express instances to use a specific web address for a client access server for Microsoft Exchange, type `traittool -global -trait EWSCASURL -set <web_address>`, where `<web_address>` is the web address for the Microsoft Exchange client access server.
5. Restart the BlackBerry Messaging Agent instances that you made changes to.

Configuring the BlackBerry Messaging Agent instances to look up the user's status using only Microsoft Exchange Web Services

You can configure the BlackBerry® Messaging Agent instances to use only Microsoft® Exchange Web Services to determine the user's status, for example, whether a user is available, busy, or offline. By default, the BlackBerry Messaging Agent instances can determine the user’s status using Microsoft Exchange Web Services unless the user is an external user or the user's email address is a distribution list. If the BlackBerry Messaging Agent instances cannot determine the user's status using Microsoft Exchange Web Services and Microsoft Exchange public folders that are in your organization's environment, the BlackBerry Messaging Agent instances can search the Microsoft Exchange public folders for the user’s status. If your organization's environment is running Microsoft Exchange 2007, it does not include public folders and the BlackBerry Messaging Agent instances write error messages to the log files because they cannot find the public folders.

You can configure the BlackBerry Messaging Agent instances to look up the user's status using only Microsoft Exchange Web Services to avoid the BlackBerry Messaging Agent instances writing error messages to their log files.
Configure the BlackBerry Messaging Agent instances to look up a user’s status using only Microsoft Exchange Web Services

1. Copy the BlackBerry® Enterprise Server Express installation files to the computer that hosts the BlackBerry Enterprise Server Express instance.
2. Extract the contents to a folder on the computer.
3. At the command prompt, navigate to `<extracted_folder>\tools`.
4. Perform one of the following actions:
   - To configure a BlackBerry Messaging Agent on a BlackBerry Enterprise Server Express to look up the user’s status using only Microsoft® Exchange Web Services, type `traittool -server <server_name> -agent <agent_id> -trait EWSUserAvailabilityAccess -set EWS`, where `<server_name>` is the name of the BlackBerry Enterprise Server Express and `<agent_id>` is the ID for the BlackBerry Messaging Agent.
   - To configure all BlackBerry Messaging Agent instances on a specific BlackBerry Enterprise Server Express to look up the user’s status using only Microsoft Exchange Web Services, type `traittool -server <server_name> -trait EWSUserAvailabilityAccess -set EWS`, where `<server_name>` is the name of the BlackBerry Enterprise Server Express.
   - To configure all BlackBerry Messaging Agent instances on all BlackBerry Enterprise Server Express instances to look up the user’s status using only Microsoft Exchange Web Services, type `traittool -global -trait EWSUserAvailabilityAccess -set EWS`.
5. Press ENTER.

Correcting calendar synchronization errors on devices

If you run corrective calendar synchronization on a BlackBerry® Enterprise Server Express instance, you can find and correct differences between the calendar entries on BlackBerry devices and the calendar entries on users’ computers. You can specify a recurring day and time when the process can run and specific days when the process should check for calendar synchronization errors.

You configure corrective calendar synchronization using the BlackBerry Enterprise Trait Tool, which is located in the Tools folder of the BlackBerry Enterprise Server Express installation files.

If corrective calendar synchronization finds differences between the calendar entries on a device and the calendar entries on a computer, the process writes information about the differences to the BlackBerry Messaging Agent log file and, optionally, automatically corrects the calendar synchronization errors that it finds.

It is a best practice to schedule corrective calendar synchronization to occur during low-use periods. For example, you can schedule the process to begin in the early evening, before devices are scheduled to turn off automatically.
Configuration levels using the BlackBerry Enterprise Trait Tool

You can use the BlackBerry® Enterprise Trait Tool to specify whether corrective calendar synchronization checks calendar entries for a specific user, users on a specific BlackBerry® Enterprise Server Express, or all users. The tool uses a hierarchy to determine what calendar entries to check. Settings at the user level override settings at the server level, settings at the server level override settings at the global level, and settings at the global level override the default settings.

<table>
<thead>
<tr>
<th>Level</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-global</td>
<td>The setting that you specify applies to all users.</td>
</tr>
<tr>
<td>-server</td>
<td>The setting that you specify applies to all users on a specific BlackBerry Enterprise Server Express.</td>
</tr>
<tr>
<td>-user</td>
<td>The setting that you specify applies to a specific user.</td>
</tr>
</tbody>
</table>

Turn off corrective calendar synchronization

By default, corrective calendar synchronization is turned on. If you do not want the BlackBerry® Enterprise Server Express to check for differences between calendar entries on BlackBerry® devices and calendar entries on users' computers, you can turn off corrective calendar synchronization.

1. Copy the BlackBerry Enterprise Server Express installation files to a computer that hosts a BlackBerry Enterprise Server Express instance.
2. Extract the contents to a folder on the computer.
3. At the command prompt, navigate to the folder that contains the TraitTool.exe file.
4. Perform one of the following actions:
   - To turn off corrective calendar synchronization for a specific user account, type `traittool -user <smtp_address> -trait ExchangeSmartSyncEnable -set false`.
   - To turn off corrective calendar synchronization for all user accounts that are associated with a BlackBerry Enterprise Server Express, type `traittool -server <server_name> -trait ExchangeSmartSyncEnable -set false`.
   - To turn off corrective calendar synchronization for all user accounts, type `traittool -global -trait ExchangeSmartSyncEnable -set false`.
5. Press ENTER.

Example: Turning off the process for all users

```
traittool -global -trait ExchangeSmartSyncEnable -set false
```

Example: Turning off the process for a specific user

```
traittool -user ian.undas@blackberry.com -trait ExchangeSmartSyncEnable -set false
```
After you finish: To turn on corrective calendar synchronization process, type `traittool -<level> -trait ExchangeSmartSyncEnable -set true`, where `<level>` is the SMTP address of a specific user account, the server name of a specific BlackBerry Enterprise Server Express for all user accounts that are associated with the specific BlackBerry Enterprise Server Express, or global for all user accounts.

View the current settings for corrective calendar synchronization

1. Copy the BlackBerry® Enterprise Server Express installation files to a computer that hosts a BlackBerry Enterprise Server Express instance.
2. Extract the contents to a folder on the computer.
3. At the command prompt, navigate to the folder that the TraitTool.exe file is located in.
4. Perform one of the following actions:
   - To view the calendar synchronization settings for a specific user account, type `traittool -user <smtp_address> -list`.
   - To view the calendar synchronization settings for all user accounts that are associated with a BlackBerry Enterprise Server Express, type `traittool -server <server_name> -list`.
   - To view the calendar synchronization settings for all user accounts, type `traittool -global -list`.
5. Press ENTER.

Example: Viewing the global calendar synchronization settings

```
traittool -global -list
```

Turn off automatic error correction in corrective calendar synchronization

By default, corrective calendar synchronization process finds calendar synchronization errors, adds the errors to the BlackBerry® Messaging Agent log file, and automatically corrects the errors. If you do not want corrective calendar synchronization to automatically correct calendar synchronization errors, you can turn off this function.

1. Copy the BlackBerry® Enterprise Server Express installation files to a computer that hosts a BlackBerry Enterprise Server Express instance.
2. Extract the contents to a folder on the computer.
3. At the command prompt, navigate to `<extracted_folder>\tools`.
4. Perform one of the following actions:
   - To turn off automatic correction of calendar synchronization errors for a specific user account, type `traittool -user <smtp_address> -trait ExchangeSmartSyncSendUpdate -set false`.
   - To turn off automatic correction of calendar synchronization errors for all user accounts that are associated with a BlackBerry Enterprise Server Express, type `traittool -server <server_name> -trait ExchangeSmartSyncSendUpdate -set false`.
   - To turn off automatic correction of calendar synchronization errors for all user accounts, type `traittool -global -trait ExchangeSmartSyncSendUpdate -set false`.
5. Press ENTER.
Example: Turn off automatic error correction for a specific user

```
traittool -user ian.dundas@blackberry.com -trait ExchangeSmartSyncSendUpdate -set false
```

After you finish: To turn on calendar synchronization error correction, type `traittool -<level> -trait ExchangeSmartSyncSendUpdate -set true`, where `<level>` is the SMTP address of a specific user account, the server name of a specific BlackBerry Enterprise Server Express for all user accounts that are associated with the specific BlackBerry Enterprise Server Express, or global for all user accounts.

**Configure the range of days to check for calendar synchronization errors**

You can configure corrective calendar synchronization to check for calendar synchronization errors during a specific range of days in the calendar after the current date.

1. Copy the BlackBerry® Enterprise Server Express installation files to a computer that hosts a BlackBerry Enterprise Server Express instance.
2. Extract the contents to a folder on the computer.
3. At the command prompt, navigate to the folder that the TraitTool.exe file is located in.
4. Perform one of the following actions:
   - To check for calendar synchronization errors during a specific range of days in the calendar for a user account, type `traittool -user <smtp_address> -trait ExchangeSmartSyncDays -set <value>`, where `<value>` is a number from 1 to 365.
   - To check for calendar synchronization errors during a specific range of days in the calendar for all user accounts that are associated with a BlackBerry Enterprise Server Express, type `traittool -server <server_name> -trait ExchangeSmartSyncDays -set <value>`, where `<value>` is a number from 1 to 365.
   - To check for calendar synchronization errors during a specific range of days in the calendar for all user accounts, type `traittool -global -trait ExchangeSmartSyncDays -set <value>`, where `<value>` is a number from 1 to 365.
5. Press ENTER.

Example: To configure corrective calendar synchronization to check calendar entries for the period of three days from the current date for all users, type:

```
traittool -global -trait ExchangeSmartSyncDays -set 3
```
Configure when corrective calendar synchronization runs

You can configure corrective calendar synchronization to start running at a specific hour, on recurring days, or on
only one recurring day. To specify more than one value for when corrective calendar synchronization runs, after you
extract the BlackBerry® Enterprise Server Express installation files to the computer, you can create a list of values
that are separated by commas (,) at the command prompt.

1. Copy the BlackBerry Enterprise Server Express installation files to a computer that hosts a BlackBerry Enterprise
Server Express instance.
2. Extract the contents to a folder on the computer.
3. At the command prompt, navigate to the folder that the TraitTool.exe file is located in.
4. Perform one of the following actions:
   • To configure calendar synchronization to occur at a specific hour for a specific user account, type `traittool
     -user <smtp_address> -trait ExchangeSmartSyncTriggerHour -set <value>`, where `<value>` is a number from
     0 to 23, 0 is 12:00 AM, and 23 is 11:00 PM. The default value is 0, which is 12:00 AM.
   • To configure calendar synchronization to occur at a specific hour for all user accounts that are associated
     with a BlackBerry Enterprise Server Express, type `traittool -server <server_name> -trait ExchangeSmartSyncTriggerHour
     -set <value>`, where `<value>` is a number from 0 to 23, 0 is 12:00 AM, and 23 is 11:00 PM. The default value is 0, which is 12:00 AM.
   • To configure calendar synchronization to occur at a specific hour for all user accounts, type `traittool -global
     -trait ExchangeSmartSyncTriggerHour -set <value>`, where `<value>` is a number from 0 to 23, 0 is 12:00 AM, and
     23 is 11:00 PM. The default value is 0, which is 12:00 AM.
5. Press ENTER.
6. Perform one of the following actions:
   • To configure calendar synchronization to recur on specific days for all user accounts, type `traittool -global
     -trait ExchangeSmartSyncSchedule -set <value>`, where `<value>` is one or more of the following options:
     Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday, Weekdays, Weekends, or Daily. The default value is Daily.
   • To configure calendar synchronization to recur on specific days for all user accounts that are associated with
     a BlackBerry Enterprise Server Express, type `traittool -server <server_name> -trait ExchangeSmartSyncSchedule
     -set <value>`, where `<value>` is one or more of the following options: Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday, Weekdays, Weekends, or Daily. The default value is Daily.
   • To configure calendar synchronization to recur on specific days for a user account, type `traittool -user
     <smtp_address> -trait ExchangeSmartSyncSchedule -set <value>`, where `<value>` is one or more of the
     following options: Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday, Weekdays, Weekends,
     or Daily. The default value is Daily.
7. Press ENTER.

Example: Configuring corrective calendar synchronization to run at 10:00 PM for all users on the BlackBerry
Enterprise Server Express that is named SERVER01
Example: Corrective calendar synchronization that runs at 11:00 PM for all users on the BlackBerry Enterprise Server Express that is named SERVER02

```plaintext
traittool -server SERVER02 -trait ExchangeSmartSyncTriggerHour -set 23
```

Example: Corrective calendar synchronization that runs on weekdays for all users

```plaintext
traittool -global -trait ExchangeSmartSyncSchedule -set Weekdays
```

Example: Corrective calendar synchronization that runs on Monday, Wednesday, and Friday for a specific user

```plaintext
traittool -user greg.stark@blackberry.com -trait ExchangeSmartSyncSchedule -set Monday,Wednesday,Friday
```

Logging information for corrective calendar synchronization

Corrective calendar synchronization writes the following information to the BlackBerry® Messaging Agent log file:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DIF</td>
<td>specifies that a calendar item is different on the BlackBerry device than it is in the email application</td>
</tr>
<tr>
<td>MOD</td>
<td>specifies that a calendar item is missing on the device</td>
</tr>
<tr>
<td>MOO</td>
<td>specifies that a calendar item is missing in the email application</td>
</tr>
<tr>
<td>SAM</td>
<td>specifies that a calendar item is the same on the device and in the email application</td>
</tr>
<tr>
<td>SmartSyncFireOff</td>
<td>specifies that the calendar synchronization process was initiated using the BlackBerry® Enterprise Trait Tool instead of the standard calendar synchronization process</td>
</tr>
</tbody>
</table>

Delete a setting for corrective calendar synchronization

If you delete a setting for corrective calendar synchronization, the calendar synchronization process uses the setting that you specified at the next highest level of the hierarchy. For example, if you delete a setting at the user level, the process uses the setting that is specified at the server level because the server level is the next highest level. If you do not specify any values, the default value is used.

1. Copy the BlackBerry® Enterprise Server Express installation files to a computer that hosts a BlackBerry Enterprise Server Express instance.
2. Extract the contents to a folder on the computer.
3. At the command prompt, navigate to the folder that the TraitTool.exe file is located in.
4. Perform one of the following actions:
   - To delete a setting for a specific user account, type `traittool -user <smtp_address> -trait <name> -erase`, where `<name>` is the setting you want to delete.
5. Press ENTER.

Example: To delete the setting for the hour that corrective calendar synchronization begins on the BlackBerry Enterprise Server Express that is named SERVER01, type:

```
traittool -server SERVER01 -trait ExchangeSmartSyncTriggerHour -erase
```

Start corrective calendar synchronization manually for a user account

By default, the BlackBerry® Enterprise Server Express synchronizes the calendar on each BlackBerry device user's computer with the calendar on each user's BlackBerry device at a regular interval. You can use the BlackBerry Administration Service to start corrective calendar synchronization manually for a user account.

1. In the BlackBerry Administration Service, on the BlackBerry solution management menu, expand User.
2. Click Manage users.
3. Search for a user account.
4. In the search results, click the PIN for the user account.
5. In the Communications list, click Synchronize calendar.

Improving the flow of email messages and calendar synchronization when the BlackBerry Enterprise Server Express runs on Windows Server 2008

The BlackBerry® Messaging Agent uses the CalHelper application to connect to the Microsoft® Exchange Server so that the BlackBerry Messaging Agent can synchronize calendars on BlackBerry devices with Microsoft® Outlook® calendars.

The BlackBerry Messaging Agent uses the MAPI32.dll library to create temporary MAPI profiles that the CalHelper application can use to connect to the Microsoft Exchange Server to access users' calendars.

After you install the BlackBerry Enterprise Server Express, if you are running Windows Server® 2008 and notice that the limit that Windows Server 2008 places on NSPI connections is impacting MAPI performance and the flow of email messages, you can change how the BlackBerry Messaging Agent creates temporary MAPI profiles for the CalHelper application.

For more information, visit www.blackberry.com/support to read KB 21413.
Change how the BlackBerry Enterprise Server Express creates temporary MAPI profiles for the CalHelper application

1. On the computer that hosts the BlackBerry® Enterprise Server Express, on the taskbar, click **Start > Run**.
2. Type **regedit**.
3. Click **OK**.
4. Perform one of the following actions:
   - If you are running a 32-bit version of Windows®, go to HKEY_LOCAL_MACHINE\SOFTWARE\Research In Motion\BlackBerry Enterprise Server\Agents.
   - If you are running a 64-bit version of Windows, go to HKEY_LOCAL_MACHINE\SOFTWARE\WOW6432Node \Research In Motion\BlackBerry Enterprise Server\Agents.
5. Create a DWORD value that is named **CreateCDOProfile**.
6. Double-click the new DWORD value.
7. In the **Value data** field, perform one of the following actions:
   - To use the CDO.dll library to create temporary MAPI profiles for the CalHelper application, type **0**.
   - To use the MAPI32.dll library to create temporary MAPI profiles for the CalHelper application, type **1**.
8. In the Windows Services, restart the BlackBerry Dispatcher.
Managing a BlackBerry Domain

Restarting BlackBerry Enterprise Server Express components

When you complete certain tasks, you need to restart one or more BlackBerry® Enterprise Server Express components. You restart the BlackBerry Enterprise Server Express components using the BlackBerry Administration Service or Windows® services.

<table>
<thead>
<tr>
<th>BlackBerry Enterprise Server Express component</th>

| BlackBerry Administration Service | BlackBerry Administration Service | • BlackBerry Administration Service - Application Server  
• BlackBerry Administration Service - Native Code Container |
| BlackBerry Web Desktop Manager | BlackBerry Administration Service | • BlackBerry Administration Service - Application Server  
• BlackBerry Administration Service - Native Code Container |

Restart a BlackBerry Enterprise Server Express component using the BlackBerry Administration Service

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. Expand the component that you want to restart.
3. Click an instance.
4. Click Restart instance.
Restart a BlackBerry Enterprise Server Express component using Windows Services

1. On each computer that hosts the BlackBerry® Enterprise Server Express component, in the Windows® Services, restart the services for the component.

2. If you want to restart all of the BlackBerry Enterprise Server Express components, you must restart the Windows Services in the following order:
   - BlackBerry Administration Service - Application Server
   - BlackBerry Administration Service - Native Code Container
   - BlackBerry Mail Store Service
   - BlackBerry MDS Connection Service
   - BlackBerry Dispatcher
   - BlackBerry Attachment Service
   - BlackBerry Controller
   - All of the remaining services for BlackBerry Enterprise Server Express components

Best practice: Restarting more than one BlackBerry Administration Service instance

To restart all BlackBerry® Administration Service instances without issues, the best practice is to stop all instances before you begin restarting the instances.

If you must keep at least one BlackBerry Administration Service instance running while you restart all instances, you should restart the instances one at a time and verify that each instance that you restart is running before you restart the next instance.

Using the BlackBerry Enterprise Trait Tool

The BlackBerry® Enterprise Trait Tool is a stand-alone command line tool that you can use to configure specific BlackBerry® Enterprise Server Express traits. You can configure most BlackBerry Enterprise Server Express settings using the BlackBerry Administration Service, but you must use the BlackBerry Enterprise Trait Tool to configure specific settings that are not available in the BlackBerry Administration Service.

The BlackBerry Enterprise Trait Tool file is located in the installation files for the BlackBerry Enterprise Server Express and is named TraitTool.exe. You must launch the TraitTool.exe file using a Windows® command prompt.

Use the BlackBerry Enterprise Trait Tool

1. Copy the BlackBerry® Enterprise Server Express installation files to a computer that hosts a BlackBerry Enterprise Server Express instance.

2. Extract the contents to a folder on the computer.

3. At the command prompt, navigate to <extracted_folder>\tools.
4. Perform one of the following actions:

<table>
<thead>
<tr>
<th>Task</th>
<th>Steps</th>
</tr>
</thead>
<tbody>
<tr>
<td>Display the current version of the trait tool and a summary of valid commands.</td>
<td>Type <code>traittool</code>.</td>
</tr>
<tr>
<td>Display all possible traits, the expected data types, and any value restrictions.</td>
<td>Type <code>traittool -show</code>.</td>
</tr>
<tr>
<td>Display a list of traits that were configured in the BlackBerry® Domain.</td>
<td>Type <code>traittool {*} -list</code>.</td>
</tr>
<tr>
<td>Configure the value of a trait in the BlackBerry Domain specified.</td>
<td>Type <code>traittool {*} -trait &lt;trait name&gt; -set &lt;value&gt;</code>.</td>
</tr>
<tr>
<td>Erase the value of a trait.</td>
<td>Type <code>traittool {*} -trait &lt;trait name&gt; -erase</code>.</td>
</tr>
</tbody>
</table>

Replace the braces and asterisk {*} with one or more of the following command line options:

- `-global` to specify all BlackBerry Enterprise Server Express instances in the BlackBerry Domain
- `-agent <agent id>` to specify the ID for the BlackBerry Messaging Agent
- `-group <groups_name>` to specify a group of BlackBerry device users
- `-user <smtp_address>` to specify one user
- `-server <server_name>` to specify a BlackBerry Enterprise Server Express instance
- `-basserver <name>` to specify the computer that hosts the BlackBerry Administration Service

5. Press ENTER.

6. Restart the BlackBerry Enterprise Server Express component that is associated with the trait that you configured.

**BlackBerry Enterprise Trait Tool traits**

The BlackBerry® Enterprise Trait Tool includes the following traits that you can change to meet the requirements of your organization’s environment:

<table>
<thead>
<tr>
<th>Trait</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ACPByteSizeDeviceVersion</td>
<td>This trait specifies the minimum version of the BlackBerry® Device Software that can receive 8 bytes of ACP data. The typical amount of ACP data that BlackBerry devices can receive is 4 bytes. The BlackBerry® Enterprise Server Express checks the value of this trait to find out how many bytes of ACP data to send to devices. If the version of the BlackBerry Device Software that the device is running is earlier than the version that this trait specifies, the BlackBerry Enterprise Server Express sends the device 4 bytes of ACP data instead of 8 bytes.</td>
</tr>
<tr>
<td>Trait</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>ActiveDirectoryLDAPConnectTimeout</td>
<td>This trait specifies the number of seconds that the BlackBerry Administration Service waits for the BlackBerry Administration Service and the Microsoft® Active Directory® to connect over LDAP before the connection times out. The default value is 5.</td>
</tr>
<tr>
<td>BASIsProxyWPADOptionEnabled</td>
<td>This trait specifies whether the BlackBerry Administration Service uses the Web Proxy Autodiscovery protocol to discover proxy servers automatically. If you want to enable the Web Proxy Autodiscovery protocol, change the value to 1. If you want to disable the Web Proxy Autodiscovery protocol, change the value to 0. If you do not change the value to 1, the Web Proxy Autodiscovery protocol is not enabled. For more information, see Configure the BlackBerry Administration Service to use Web Proxy Autodiscovery Protocol to discover a proxy server.</td>
</tr>
<tr>
<td>BASNumberOfAdditionalWiredApplicationsToIncludeInACP</td>
<td>This trait specifies the number of additional wired applications to include in the application control policy when reconciling applications.</td>
</tr>
<tr>
<td>BASPASBundleRequestVersionSupport</td>
<td>This trait specifies the version of the BundleRequest.xml file that the BlackBerry® Infrastructure supports. The default version is 1.0.</td>
</tr>
<tr>
<td>BASProxyBasicAuthPassword and BASProxyBasicAuthUID</td>
<td>If the BlackBerry Administration Service uses HTTP basic authentication to authenticate with a proxy server, these traits specify the password and user name that the BlackBerry Administration Service can use. You can specify the password and user name for a BlackBerry Administration Service instance, or for all the BlackBerry Administration Service instances in the BlackBerry Domain. If you do not configure these traits, you cannot use HTTP basic authentication for proxy authentication. For more information, see Configure the BlackBerry Administration Service to use HTTP basic authentication.</td>
</tr>
<tr>
<td>CalendarRescanInterval</td>
<td>This trait specifies the amount of time, in minutes, that can occur between the scans that the BlackBerry Enterprise Server Express performs on the calendar contents on the device. When the amount of time between scans expires, the BlackBerry Enterprise Server Express synchronizes the calendar contents on the device.</td>
</tr>
<tr>
<td>Trait</td>
<td>Description</td>
</tr>
<tr>
<td>-------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td></td>
<td>with the calendar contents in the user’s email application. If the BlackBerry Enterprise Server Express detects any differences between the calendar contents, the BlackBerry Enterprise Server Express synchronizes the differences. The default value is 15.</td>
</tr>
<tr>
<td>EWSCASURL</td>
<td>This trait specifies whether the BlackBerry Messaging Agent uses a specific web address to access the client access server for Microsoft® Exchange. You can configure this trait for all BlackBerry Messaging Agent instances on a specific BlackBerry Enterprise Server Express, or all BlackBerry Messaging Agent instances on all BlackBerry Enterprise Server Express instances. If you do not configure this trait, the BlackBerry Messaging Agent uses the Microsoft® Autodiscover service to find the client access server for Microsoft Exchange. For more information, see Configure the BlackBerry Messaging Agent instances to use a specific web address for a client access server for Microsoft Exchange.</td>
</tr>
<tr>
<td>EWSDomain</td>
<td>This trait specifies the domain name to use with the Service Account if you configure the EWSServiceAccount trait.</td>
</tr>
<tr>
<td>EWSEnable</td>
<td>This trait specifies how the BlackBerry Enterprise Server Express manages calendars on devices. You can configure this trait for a specific BlackBerry Messaging Agent, all BlackBerry Messaging Agent instances on a specific BlackBerry Enterprise Server Express, or all BlackBerry Messaging Agent instances on all BlackBerry Enterprise Server Express instances. If you want the BlackBerry Enterprise Server Express to use only Microsoft Exchange Web Services to manage calendars on devices, change the value to true (1). If you want the BlackBerry Enterprise Server Express to use only MAPI and CDO libraries to manage calendars on devices, change the value to false (0). If you want the BlackBerry Enterprise Server Express to use Microsoft Exchange Web Services whenever possible and MAPI and CDO libraries when using Microsoft Exchange Web Services is not possible, delete the trait value which restores the default setting. For more information, see Configure the BlackBerry Enterprise Server Express to use Microsoft Exchange Web Services, and Configure the BlackBerry Enterprise Server Express to use MAPI and CDO libraries.</td>
</tr>
<tr>
<td>Trait</td>
<td>Description</td>
</tr>
<tr>
<td>------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>EWSMaxWorkerThreads</td>
<td>This trait specifies how many worker threads Microsoft Exchange Web Services uses. This trait is valid for BlackBerry Enterprise Server Express 5.0 SP1. The default value is 27.</td>
</tr>
<tr>
<td>EWSPassword</td>
<td>This trait specifies the password to use with the Service Account if you configure the EWSServiceAccount trait.</td>
</tr>
<tr>
<td>EWSSCPURL</td>
<td>This trait specifies whether the BlackBerry Messaging Agent uses a specific web address to access the Microsoft Autodiscover service. You can configure this trait for all BlackBerry Messaging Agent instances on a specific BlackBerry Enterprise Server Express, or all BlackBerry Messaging Agent instances on all BlackBerry Enterprise Server Express instances. If you do not configure this trait, the BlackBerry Messaging Agent uses a web address to access the Microsoft Autodiscover service that the record lookup for the Microsoft Active Directory Service Connection Point provides. For more information, see Configure the BlackBerry Messaging Agent instances to use a web address for a specific Microsoft Autodiscover service.</td>
</tr>
<tr>
<td>EWSSServiceAccount</td>
<td>Service account name that you can use to connect to Microsoft Exchange Web Services to impersonate all other BlackBerry Enterprise Server Express users.</td>
</tr>
<tr>
<td>EWSUserAvailabilityAccess</td>
<td>This trait specifies whether the BlackBerry Messaging Agent receives the user's status using Microsoft Exchange Web Services or by searching for the information in the Microsoft Exchange public folders. You can configure this trait for a specific BlackBerry Messaging Agent, all BlackBerry Messaging Agent instances on a specific BlackBerry Enterprise Server Express, or all BlackBerry Messaging Agent instances on all BlackBerry Enterprise Server Express instances. If you want the BlackBerry Messaging Agent to receive the user's status using Microsoft Exchange Web Services, change the value to EWS. The default value is PF, the BlackBerry Messaging Agent receives the user's status using Microsoft Exchange public folders. For more information, see Configure the BlackBerry Messaging Agent instances to look up a user's status using only Microsoft Exchange Web Services.</td>
</tr>
<tr>
<td>Trait</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>ExchangeDisableConfirmEmailDelivery</strong></td>
<td>This trait specifies whether a user can append the word &quot;confirm&quot; to the subject of email messages to receive an automatic confirmation that the email message is delivered to the intended recipient. If you want to permit the BlackBerry Messaging Agent to send confirmations automatically when the BlackBerry Messaging Agent delivers email messages, change the value to false (0). If you want to prevent the BlackBerry Messaging Agent from sending confirmations automatically when the BlackBerry Messaging Agent delivers email messages, change the value to true (1). The default value is false (0), the BlackBerry Messaging Agent sends confirmations automatically when the BlackBerry Messaging Agent delivers email messages.</td>
</tr>
<tr>
<td><strong>ExchangeEnableMLangConversion</strong></td>
<td>This trait specifies whether the BlackBerry Messaging Agent uses the Microsoft Multi Language Support DLL to perform character set conversions. If you want the BlackBerry Messaging Agent to use Microsoft Multi Language Support DLL, change the value to true (1). The default value is false (0).</td>
</tr>
<tr>
<td><strong>ExchangeEnableWriteUserStatsToMailbox</strong></td>
<td>This trait specifies whether the BlackBerry Messaging Agent writes statistics to each user's Microsoft Exchange mailbox when it processes email messages for users. By default, to reduce the workload on the Microsoft® Exchange Server, BlackBerry Messaging Agent 5.0 SP2 or later does not write statistics to user mailboxes when it processes email messages. If you want the BlackBerry Messaging Agent to write statistics to users' Microsoft Exchange mailboxes, change the value to true (1). By default, the value is false (0). If you change this value, the result might be an impact on the performance of your organization's BlackBerry Enterprise Server Express environment and the Microsoft Exchange Server. For more information, see Permit the BlackBerry Messaging Agent to write statistics to Microsoft Exchange mailboxes.</td>
</tr>
<tr>
<td><strong>ExchangeSmartSyncDays</strong></td>
<td>This trait specifies how many days in the calendar, after the current date, that the BlackBerry Enterprise Server Express checks for calendar errors on devices. You can configure the BlackBerry Enterprise Server Express to check for calendar errors for a user account, all user accounts that you associate with a BlackBerry Enterprise Server Express, or all user accounts.</td>
</tr>
<tr>
<td>Trait</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td></td>
<td>The default value is 7.</td>
</tr>
<tr>
<td></td>
<td>For more information, see Configure the period of days to check for calendar synchronization errors.</td>
</tr>
<tr>
<td>ExchangeSmartSyncEnable</td>
<td>This trait specifies whether the BlackBerry Enterprise Server Express checks for calendar errors on devices. The BlackBerry Enterprise Server Express checks for calendar errors on devices for all user accounts. If you don't want the BlackBerry Enterprise Server Express to check for calendar errors on devices, change the value to false (0) for a specific user account, all user accounts that are associated with a BlackBerry Enterprise Server Express, or all user accounts.</td>
</tr>
<tr>
<td></td>
<td>The default value is true (1), the BlackBerry Enterprise Server Express checks for calendar errors on devices.</td>
</tr>
<tr>
<td></td>
<td>For more information, see Turn off corrective calendar synchronization process.</td>
</tr>
<tr>
<td>ExchangeSmartSyncSchedule</td>
<td>This trait specifies when the calendar synchronization process runs. You can configure the calendar synchronization process to start running on multiple recurring days or on only one recurring day for a user account, all user accounts that you associate with a BlackBerry Enterprise Server Express, or all user accounts.</td>
</tr>
<tr>
<td></td>
<td>The default value is Daily.</td>
</tr>
<tr>
<td></td>
<td>For more information, see Configure when corrective calendar synchronization runs.</td>
</tr>
<tr>
<td>ExchangeSmartSyncSendUpdate</td>
<td>This trait specifies whether the calendar synchronization process writes calendar synchronization errors to the BlackBerry Messaging Agent log file, or writes the errors to the log file and corrects the calendar synchronization errors on devices. If you don't want the BlackBerry Messaging Agent to correct calendar synchronization errors automatically, change the value to false (0) for a specific user account, all user accounts that you associate with a BlackBerry Enterprise Server Express, or all user accounts.</td>
</tr>
<tr>
<td></td>
<td>The default value is true (1), the BlackBerry Messaging Agent corrects calendar synchronization errors automatically.</td>
</tr>
<tr>
<td></td>
<td>For more information, see Turn off automatic error correction in corrective calendar synchronization.</td>
</tr>
<tr>
<td>ExchangeSmartSyncTriggerHour</td>
<td>This trait specifies when the BlackBerry Enterprise Server Express checks for calendar synchronization errors on devices. You can configure the BlackBerry Enterprise Server Express to check for calendar synchronization errors on devices. You can set the time for checking calendar synchronization errors on devices.</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td>Trait</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td></td>
<td>calendar synchronization errors on devices at a specific hour for a specific user account, all user accounts that you associate with a BlackBerry Enterprise Server Express, or all user accounts.</td>
</tr>
<tr>
<td></td>
<td>The default value is 0, the BlackBerry Enterprise Server Express checks for calendar synchronization errors on devices at 12:00 AM.</td>
</tr>
<tr>
<td></td>
<td>For more information, see <a href="#">Configure when corrective calendar synchronization runs</a>.</td>
</tr>
<tr>
<td>ExchangeSuppressBodyOfSentItems</td>
<td>This trait specifies whether the body of an email message is included in an email message sent to a device when the BlackBerry Enterprise Server Express synchronizes email messages sent by an email application.</td>
</tr>
<tr>
<td></td>
<td>The default value is false (0), the body of an email message is sent to a device.</td>
</tr>
<tr>
<td>MailstoreAddressRefreshEnabled</td>
<td>This trait specifies whether you want the BlackBerry Mail Store Service to update the user directory in the BlackBerry Configuration Database. If you want the BlackBerry Mail Store Service to update the user directory in the BlackBerry Configuration Database, change the value to true (1). If you do not want the BlackBerry Mail Store Service to update the user directory in the BlackBerry Configuration Database, change the value to false (0).</td>
</tr>
<tr>
<td></td>
<td>The default value is true (1), the BlackBerry Mail Store Service updates the user directory in the BlackBerry Configuration Database.</td>
</tr>
<tr>
<td></td>
<td>For more information, see <a href="#">Configure the BlackBerry Mail Store Service instance that updates the contact list</a>.</td>
</tr>
<tr>
<td>MailstorePublicFolderLookupEnabled</td>
<td>This trait specifies whether the BlackBerry Administration Service looks up public folders and displays them in the list of public contact folders. When an organization has a large number of public folders available, it can take longer than expected for the BlackBerry Messaging Agent to display the folders and the BlackBerry Administration Service might time out. If you want to turn off the look up function, change the value to false (0). If you turn off the look up function, you can access the BlackBerry Messaging Agent in the BlackBerry Administration Service but you cannot see the list of available public folders in the Email component page in the BlackBerry Administration Service.</td>
</tr>
<tr>
<td>Trait</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>MaxDomainSlowSyncsPerMin</td>
<td>This trait specifies the maximum number of full synchronization events that the BlackBerry Synchronization Service can process each minute, in a BlackBerry Domain. The default value is 300.</td>
</tr>
<tr>
<td>MaxPollCycleCountForHungSlowSync</td>
<td>This trait specifies the maximum number of times that the BlackBerry Synchronization Service polls a device to determine if there is a hung synchronization event. The default value of 10.</td>
</tr>
<tr>
<td>MaxPollCycleCountForNoResponseToSlowSync</td>
<td>This trait specifies the maximum number of times that the BlackBerry Synchronization Service polls a device to determine if the device is out of a wireless coverage area or if wireless synchronization is disabled on the device. The default value is 2.</td>
</tr>
<tr>
<td>MaxSyncServerSlowSyncsInProcess</td>
<td>This trait specifies the maximum number of full synchronization events that a BlackBerry Synchronization Service can start before it schedules more full synchronization events. The default value is 10.</td>
</tr>
<tr>
<td>MaxSyncServerSlowSyncsPerMin</td>
<td>This trait specifies the maximum number of pending full synchronization events that the BlackBerry Synchronization Service can process each minute. The default value is 30.</td>
</tr>
<tr>
<td>MonitorJunkEmailFolderForETP</td>
<td>This trait specifies whether the BlackBerry Messaging Agent monitors the Junk folder and the Inbox for email messages that include an etp.dat attachment. When the activation process over the wireless network begins, the BlackBerry Enterprise Server Express sends an email message that includes an etp.dat attachment from the blackberry.net domain to the email account of the user. In some scenarios, anti-spam software applications that the messaging server or gateway uses filters the email messages and places them in the Junk folder. If you do not want the BlackBerry Enterprise Server Express to monitor the Junk folder for activation messages, change the value to false (0) and restart the BlackBerry Controller. The default value is true (1), the BlackBerry Enterprise Server Express monitors the Junk folder for activation messages.</td>
</tr>
<tr>
<td>Trait</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------------------------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>NumberofUserTargetTypeForSlowSyncInParallel</strong></td>
<td>This trait specifies how many different types of organizer data, such as tasks, memos, and contacts, the BlackBerry Synchronization Service can synchronize at the same time during a full synchronization event. The default value is 10.</td>
</tr>
<tr>
<td><strong>PolicyEnterpriseWipeCommandOrderTraitType</strong></td>
<td>This trait specifies the order for commands that run when the BlackBerry Policy Service sends the &quot;Delete only the organization data and remove device&quot; IT administration command to a device. The value is a string that contains the command IDs separated by a colon (:), for example, commandId1:commandId2. The default value is 3:18. Contact a BlackBerry Technical Support representative before you change the default value of this trait.</td>
</tr>
<tr>
<td><strong>PolicyThrottlingAppPush</strong></td>
<td>This trait specifies whether the BlackBerry Policy Service uses throttling to send applications the same way that it throttles IT policies and service books. If you want the BlackBerry Policy Service to send applications using throttling in the same way that it throttles IT policies and service books, change the value to true (1). If you do not want the BlackBerry Policy Service to send applications using throttling in the same way that it throttles IT policies and service books, change the value to false (0). The default value is false (0), the BlackBerry Policy Service does not use throttling to send applications the same way that it throttles IT policies and service books. For more information, see Configure BlackBerry Policy Service throttling for application polling.</td>
</tr>
<tr>
<td><strong>PolicyThrottlingInProcessJobs</strong></td>
<td>This trait specifies the maximum number of processes for IT policies or processes for service books that a BlackBerry Policy Service can run at one time before the BlackBerry Policy Service schedules additional processes for IT policies or service books. The default value is 30. For more information, see Configure BlackBerry Policy Service throttling for IT policies and service books.</td>
</tr>
<tr>
<td><strong>PolicyThrottlingMaxBESJobs</strong></td>
<td>This trait specifies the maximum number of IT policies and service books that a BlackBerry Policy Service can send to devices each minute. The default value is 100.</td>
</tr>
<tr>
<td>Trait</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>PolicyThrottlingMaxDomainJobs</td>
<td>This trait specifies the maximum number of IT policies and service books that all BlackBerry Policy Service instances can send to devices each minute. The default value is 300. For more information, see Configure BlackBerry Policy Service throttling for IT policies and service books.</td>
</tr>
<tr>
<td>PolicyThrottlingP2PKeyRate</td>
<td>This trait specifies the maximum number of processes for PIN encryption keys that a BlackBerry Policy Service can process at one time before the BlackBerry Policy Service schedules additional processes for PIN encryption keys. The default value is 60. For more information, see Configuring BlackBerry Policy Service throttling for PIN encryption keys.</td>
</tr>
<tr>
<td>RouterAutoDiscoveryMethod</td>
<td>This trait specifies the method that the BlackBerry Enterprise Server Express uses to update the list of BlackBerry Router instances in the BlackBerry Configuration Database. If you want the BlackBerry Enterprise Server Express to compile the list of BlackBerry Router instances automatically, change the value to true (1). If you want the BlackBerry Router instances to provide the BlackBerry Enterprise Server Express with the list of BlackBerry Router instances, change the value to false (0). The default value is true (1), the BlackBerry Enterprise Server Express compiles the list of BlackBerry Router instances automatically.</td>
</tr>
<tr>
<td>SlowSyncPollCycleInterval</td>
<td>This trait specifies the interval (in minutes) between the times that the BlackBerry Synchronization Service reviews the list of users, to determine how many pending full synchronization events can be scheduled based on the throttling parameters. The default value is 2.</td>
</tr>

Using the BlackBerry Enterprise Trait Tool, 278
Permit the BlackBerry Messaging Agent to write statistics to Microsoft Exchange mailboxes

By default, to reduce the workload on the Microsoft® Exchange Server, the BlackBerry® Messaging Agent 5.0 SP2 or later does not write statistics to each user’s Microsoft® Exchange mailbox when it processes email messages. If you want the BlackBerry Messaging Agent to function as it did in previous versions, you can permit the BlackBerry Messaging Agent to write statistics to each user’s Microsoft Exchange mailbox. Permitting the BlackBerry Messaging Agent to write statistics might have an impact on the performance of your organization’s BlackBerry® Enterprise Server Express environment and the Microsoft Exchange Server.

1. Copy the BlackBerry Enterprise Server Express installation files to a computer that hosts a BlackBerry Enterprise Server Express instance.
2. Extract the contents to a folder on the computer.
3. At the command prompt, navigate to the folder that contains the TraitTool.exe file.
4. Perform one of the following actions:
   • To permit all BlackBerry Messaging Agent instances to write statistics to users' Microsoft Exchange mailboxes, type TraitTool -global -trait ExchangeEnableWriteUserStatsToMailbox -set true.
   • To permit all BlackBerry Messaging Agent instances that are associated with a specific BlackBerry Enterprise Server Express to write statistics to users' Microsoft Exchange mailboxes, type TraitTool -server <server_name> -trait ExchangeEnableWriteUserStatsToMailbox -set true.
5. Press ENTER.

After you finish: If you do not want BlackBerry Messaging Agent instances to write statistics to each user’s Microsoft Exchange mailbox, type TraitTool -<level> -trait ExchangeEnableWriteUserStatsToMailbox -set false, where <level> is the server name of a specific BlackBerry Enterprise Server Express, or global for all BlackBerry Messaging Agent instances.

Managing BlackBerry CAL keys

BlackBerry® CAL keys control how many user accounts can exist on a BlackBerry® Enterprise Server Express at the same time. If you exceed the number of user accounts that can exist on a BlackBerry Enterprise Server Express, the BlackBerry Administration Service informs you that you require more BlackBerry CAL keys.

To help you troubleshoot BlackBerry CAL key issues, copy the BlackBerry CAL keys from the BlackBerry Administration Service to a text file.

If you install all BlackBerry Enterprise Server Express components on the same computer as the messaging server, it is a best practice to support up to 75 users only on the BlackBerry Enterprise Server Express. If you install the BlackBerry Enterprise Server Express components on multiple computers that are separate from the computer that hosts the messaging server, it is a best practice to support no more than 2000 users on one BlackBerry Enterprise Server Express instance.
Add or delete a BlackBerry CAL key

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view.
2. Click BlackBerry Administration Service.
3. Click Edit component.
4. In the License key section, perform one of the following actions:
   - To add a BlackBerry CAL key, type the information for the BlackBerry CAL key. Click the Add icon.
   - To delete a BlackBerry CAL key, click the Delete icon.
5. Click Save all.

Copy a BlackBerry CAL key to a text file

You can copy a BlackBerry® CAL key to a text file and save it on a computer for reference if you want to transfer CAL keys to a different BlackBerry Enterprise Server Express or troubleshoot BlackBerry CAL key issues.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry solution topology > BlackBerry Domain > Component view.
2. Click BlackBerry Administration Service.
3. Click Edit component.
4. In the License key section, highlight and right-click the BlackBerry CAL key.
5. Click Copy.
6. Open a text editor.
7. Paste the BlackBerry CAL key into the file.
8. Save the file.

Configuring the BlackBerry Mail Store Service instance that updates the contact list

The BlackBerry® Configuration Database contains your organization's contact list and a list of BlackBerry® Enterprise Server Express instances. By default, the BlackBerry Mail Store Service instance that you installed with the first BlackBerry Enterprise Server Express instance that appears in the list updates the contact list. If you prevent the BlackBerry Mail Store Service that you installed with the first BlackBerry Enterprise Server Express instance from updating the contact list, the next available BlackBerry Mail Store Service instance in the list updates the contact list.

By default, if you install multiple BlackBerry Mail Store Service instances, each instance can update the contact list in the BlackBerry Configuration Database. The first BlackBerry Mail Store Service instance that updates the contact list prevents the other instances from also updating the contact list. Each BlackBerry Mail Store Service instance searches for time stamp information in the BlackBerry Configuration Database to determine if another BlackBerry Mail Store Service instance is updating the contact list already before it starts to update the contact list.
You must verify that at least one BlackBerry Mail Store Service instance can update the contact list in the BlackBerry Configuration Database so that the BlackBerry Administration Service can access the latest contact list information when you create and manage user accounts. If you prevent all of the BlackBerry Mail Store Service instances from updating the contact list, the BlackBerry Configuration Database might not contain the contact information for all user accounts on your organization's messaging server.

If the BlackBerry Configuration Database does not contain contact information for a user account, you cannot create the user account by searching for the contact information in the BlackBerry Administration Service. You can only create the user account if you use the Add from company directory option in the BlackBerry Administration Service. The Add from company directory option permits the BlackBerry Mail Store Service to search the contact information that is stored in the messaging environment so that you can create the user account even if the BlackBerry Configuration Database does not contain the contact information for the user account.

**Configure the BlackBerry Mail Store Service instance that updates the contact list**

1. Copy the BlackBerry® Enterprise Server Express installation media to a computer that hosts a BlackBerry Enterprise Server Express instance.
2. Extract the contents to a folder on the computer.
3. At the command prompt, navigate to `<extracted_folder>\tools`.
4. Perform one of the following actions:
   - To permit a BlackBerry Mail Store Service instance to update the contact list, type `Traittool -host <instance_name> -trait MailstoreAddressRefreshEnabled -set true`, where `<instance_name>` is the name of the BlackBerry Enterprise Server Express instance that you installed the BlackBerry Mail Store Service with.
   - To prevent a BlackBerry Mail Store Service instance from updating the contact list, type `Traittool -host <instance_name> -trait MailstoreAddressRefreshEnabled -set false`, where `<instance_name>` is the name of the BlackBerry Enterprise Server Express instance that you installed the BlackBerry Mail Store Service with.
5. Repeat step 4 for each BlackBerry Mail Store Service instance.

**Configuring the BlackBerry Enterprise Server Express to use LDAP to retrieve email addresses and organizer data**

By default, when BlackBerry® device users search for recipients' email addresses or organizer data, the BlackBerry® Enterprise Server Express uses MAPI to connect to the Microsoft® Exchange Server and retrieve the email addresses or organizer data that is stored in Microsoft® Active Directory®. You can configure the BlackBerry Enterprise Server Express to use LDAP to connect to Microsoft Active Directory directly to retrieve email addresses, organizer data, or both.

When you configure the BlackBerry Enterprise Server Express to use LDAP to retrieve email addresses and organizer data, you help reduce the MAPI connections that the BlackBerry Enterprise Server Express requires which helps improve the performance of the BlackBerry Enterprise Server Express and Microsoft Exchange Server. In a Microsoft® Exchange 2010 environment, if you configure the BlackBerry Enterprise Server to use LDAP, you cannot migrate users to different forests.
You can configure the following options when you configure the BlackBerry Enterprise Server Express to use LDAP to retrieve email addresses and organizer data:

- Windows® domain that the Microsoft Active Directory uses
- whether to use LDAPS to connect to Microsoft Active Directory
- timeout value for the connection to Microsoft Active Directory
- which contacts the BlackBerry Enterprise Server Express cannot retrieve, if required
- whether to support a Microsoft Active Directory that you configured for multi-tenancy, if required
- baseDN of the Microsoft Active Directory tree, if required

## Configure the BlackBerry Enterprise Server Express to connect to Microsoft Active Directory

1. On the computer that hosts the BlackBerry® Enterprise Server Express, click **Start > Run**.
2. Type `regedit`. Click **OK**.
3. Perform one of the following actions:
   - If you are running a 32-bit version of Windows®, navigate to HKEY_LOCAL_MACHINE\Software\Research In Motion\BlackBerry Enterprise Server\Agents.
   - If you are running a 64-bit version of Windows, navigate to HKEY_LOCAL_MACHINE\Software \WOW6432Node\Research In Motion\BlackBerry Enterprise Server\Agents.
4. If your organization’s environment includes multiple Windows domains, perform the following actions:
   a. Create a String value named **LDAPDomain**.
   b. Change the value to the FQDN of the global catalog server and the port number that the BlackBerry Enterprise Server Express can use to resolve the DNS name of Microsoft® Active Directory®, using the following format: `<FQDN_of_GC>:<port>`. If the BlackBerry Enterprise Server Express must connect to multiple global catalog servers for DNS name resolution, specify all of them as the value, using the following format: `<FQDN_of_GC1>:<port> <FQDN_of_GC2>:<Port> <FQDN_of_GC3>:<port>`. Separate multiple entries using spaces.

   Optionally, if you do not want to configure a limited list of global catalog servers, set the value to a domain name, and the port number to the global catalog server (for example, example.com:3268).
5. If the BlackBerry Enterprise Server Express must use a specific port to connect to Microsoft Active Directory and you did not specify the port number in the LDAPDomain string, perform the following actions:
   a. Create a DWORD value named **LDAPport**.
   b. Change the value to the port number. To limit the number of LDAP queries that the BlackBerry Enterprise Server Express needs, use the port number of the global catalog server (port 3268).
6. If the BlackBerry Enterprise Server Express must use LDAPS to connect to the Microsoft Active Directory, perform the following actions:
   a. Create a DWORD value named **LDAPssl**.
   b. Change the value to 1.
7. To change the amount of time that the BlackBerry Enterprise Server Express waits for a response from Microsoft Active Directory before the connection times out (by default, 10 seconds), perform the following actions:
a. Create a DWORD value named LDAPTimeout.
b. Change the value to the timeout period, in seconds, that your organization requires.

8. In the Windows Services, restart the BlackBerry Controller.

Related topics
Restarting BlackBerry Enterprise Server Express components, 277

Configure the BlackBerry Enterprise Server Express to retrieve email addresses and organizer data using LDAP

1. On the computer that hosts the BlackBerry® Enterprise Server Express, click Start > Run.
2. Type regedit. Click OK.
3. Perform one of the following actions:
   • If you are running a 32-bit version of Windows®, navigate to HKEY_LOCAL_MACHINE\Software\Research In Motion\BlackBerry Enterprise Server\Agents.
   • If you are running a 64-bit version of Windows, navigate to HKEY_LOCAL_MACHINE\Software \WOW6432Node\Research In Motion\BlackBerry Enterprise Server\Agents.
4. Create a DWORD value named LDAPSearch.
5. Change the value to 1.
6. To configure the BlackBerry Enterprise Server Express to resolve email addresses using LDAP, perform the following actions:
   a. Create a DWORD value named LDAPALPSearch.
   b. Change the value to 1.
7. To configure the BlackBerry Enterprise Server Express to resolve organizer data using LDAP, perform the following actions:
   a. Create a DWORD value named LDAPPIMSearch.
   b. Change the value to 1.
8. In the Windows Services, restart the BlackBerry Controller.

Prevent the BlackBerry Enterprise Server Express from retrieving contact information for specific users

If you are required by your organization to prevent BlackBerry® device users from finding contact information for specific users, you can specify a list of users that you want to prevent BlackBerry device users from finding contact information for or you can filter users using an attribute in Microsoft® Active Directory®.

Before you begin:
• Configure the BlackBerry® Enterprise Server Express to resolve email addresses and organizer data information using LDAP.
If you want to filter users using an attribute, choose an attribute in Microsoft Active Directory such as Mail or any of the extensionAttributes (extensionAttribute1 through extensionAttribute15). You can use the Active Directory Users and Computers console to change the value for the attribute to HideFromBlackBerry for all users that you do not want BlackBerry device users to find.

1. On the computer that hosts the BlackBerry Enterprise Server Express, click **Start > Run**.
2. Type `regedit`. Click **OK**.
3. Perform one of the following actions:
   - If you are running a 32-bit version of Windows®, navigate to HKEY_LOCAL_MACHINE\Software\Research In Motion\BlackBerry Enterprise Server\Agents.
   - If you are running a 64-bit version of Windows, navigate to HKEY_LOCAL_MACHINE\Software \WOW6432Node\Research In Motion\BlackBerry Enterprise Server\Agents.
4. Create a String value named **LDAPALPObj ectCategory**.
5. Change the value to one of the following options:
   - If your organization uses Microsoft® Exchange 2007 or Microsoft Exchange 2010, use `msExchDynamicDistributionList,Group,Person))(!(<attribute>=HideFromBlackBerry, where `<attribute>` is the name of the attribute that you want to filter (for example, extensionAttribute1).
   - If your organization uses earlier versions of Microsoft Exchange, use `Group,Person))(!(<attribute>=HideFromBlackBerry, where `<attribute>` is the name of the attribute that you want to filter (for example, extensionAttribute1).

You can use an asterisk (*) as a wildcard.

6. In the Windows Services, restart the BlackBerry Controller.

---

**Restrict the location in Microsoft Active Directory that the BlackBerry Enterprise Server Express can retrieve email addresses and organizer data from**

You can configure a BlackBerry® Enterprise Server Express instance so that it searches for email addresses and organizer data only in a specified BaseDN in Microsoft® Active Directory®.

1. On the computer that hosts the BlackBerry Enterprise Server Express, click **Start > Run**.
2. Type `regedit`. Click **OK**.
3. Perform one of the following actions:
   - If you are running a 32-bit version of Windows®, navigate to HKEY_LOCAL_MACHINE\Software\Research In Motion\BlackBerry Enterprise Server\Agents.
   - If you are running a 64-bit version of Windows, navigate to HKEY_LOCAL_MACHINE\Software \WOW6432Node\Research In Motion\BlackBerry Enterprise Server\Agents.
4. Create a String value named **LDAPBaseDN**.
5. Change the value to the BaseDN that you want the BlackBerry Enterprise Server Express to use (for example, ou=Waterloo,o=example,c=CA).
6. In the Windows Services, restart the BlackBerry Controller.

Restarting BlackBerry Enterprise Server Express components, 277

Configuring BlackBerry Policy Service throttling

You can configure BlackBerry® Policy Service throttling on a BlackBerry® Enterprise Server Express instance to limit the database usage of the BlackBerry Policy Service when it performs the following actions:

- sends IT policies and service books that you update to all BlackBerry devices that are associated with the BlackBerry Enterprise Server Express instance that the BlackBerry Policy Service runs on
- sends updated PIN encryption keys to all devices that are associated with the BlackBerry Enterprise Server Express instance that the BlackBerry Policy Service runs on
- performs an application poll to verify whether the BlackBerry Policy Service must send applications to all devices that are associated with the BlackBerry Enterprise Server Express instance that the BlackBerry Policy Service runs on

You can configure BlackBerry Policy Service throttling using the BlackBerry Enterprise Trait Tool. You can access the BlackBerry Enterprise Trait Tool in the Tools folder of the BlackBerry Enterprise Server Express installation files.

View the current settings for BlackBerry Policy Service throttling

1. Copy the BlackBerry® Enterprise Server Express installation files to a computer that hosts the BlackBerry Enterprise Server Express instance.
2. Extract the contents to a folder on the computer.
3. At the command prompt, navigate to <extracted_folder>\tools.
4. Type traittool -global -list
5. Press ENTER.
   If the BlackBerry Enterprise Trait Tool does not list any BlackBerry Policy Service throttling traits, no BlackBerry Policy Service throttling traits have been changed from their default values.

Configuring BlackBerry Policy Service throttling for IT policies and service books

If the BlackBerry® Policy Service detects that you updated an IT policy or service book in the BlackBerry Configuration Database, it schedules a task to create and deliver the IT policy or service book to BlackBerry device users that must receive the update. The BlackBerry Policy Service tries to process tasks as fast as the server permits, which can result in an unexpected increase in CPU usage and database usage.
Because you cannot synchronize multiple BlackBerry Policy Service instances on multiple BlackBerry® Enterprise Server Express instances, an update to an IT policy or service book that affects many users on multiple BlackBerry Enterprise Server Express instances can increase the CPU usage and database usage significantly for a long period of time. The increased CPU usage and database usage can lead to unexpected behavior such as database updates not completing.

To avoid this scenario, you can throttle the processing of IT policies and service books. You can specify the maximum number of processes for IT policies and service books that a BlackBerry Policy Service can run at one time before the BlackBerry Policy Service schedules additional processes for IT policies and service books. You can also specify the maximum number of IT policies and service books that a BlackBerry Policy Service can send to devices each minute and the maximum number of IT policies and service books that all BlackBerry Policy Service instances can send to devices each minute.

If you configure throttling, the BlackBerry Policy Service determines which users that are associated with the BlackBerry Enterprise Server Express instance that the BlackBerry Policy Service runs on require a new IT policy or service book. The BlackBerry Policy Service also determines how many users to schedule for processing in the next 60 seconds. The BlackBerry Policy Service then schedules the same number of users for processing at equal intervals over the next 60 seconds to distribute the usage on the BlackBerry Configuration Database.

The BlackBerry Policy Service only applies throttling when it automatically detects updates to IT policies or service books. The BlackBerry database notification system starts automatic detection. If you configure the BlackBerry database notification system to be turned off, a five-minute timer starts automatic detection. The BlackBerry Policy Service does not apply throttling when the BlackBerry Enterprise Server Express requests IT policies or service books during device activation or when you request that the BlackBerry Enterprise Server Express send IT policies or service books to users.

**Configure BlackBerry Policy Service throttling for IT policies and service books**

1. Copy the BlackBerry® Enterprise Server Express installation files to a computer that hosts the BlackBerry Enterprise Server Express instance.
2. Extract the contents to a folder on the computer.
3. At the command prompt, navigate to `<extracted_folder>\tools`.
4. Perform one of the following actions:
   - To configure the maximum number of processes that a BlackBerry Policy Service can run for IT policies and services books at one time before the BlackBerry Policy Service schedules additional processes, type `traittool -global -trait PolicyThrottlingInProcessJobs -set <value>`, where `<value>` is 0 or greater. The default value is 30.
   - To configure the maximum number of IT policies and service books that a BlackBerry Policy Service can send to BlackBerry devices each minute, type `traittool -global -trait PolicyThrottlingMaxBESJobs -set <value>`, where `<value>` is 1 or greater. The default value is 100.
   - To configure the maximum number of IT policies and service books that all BlackBerry Policy Service instances can send to devices each minute, type `traittool -global -trait PolicyThrottlingMaxDomainJobs -set <value>`, where `<value>` is 1 or greater. The default value is 300.
5. Press ENTER.
Example: Configuring the maximum number of IT policies or service books that a BlackBerry Policy Service can send

If you want to configure the maximum number of IT policies or service books that a BlackBerry Policy Service can send to 500, type `traittool -global -trait PolicyThrottlingMaxDomainJobs -set 500`.

### Configuring BlackBerry Policy Service throttling for PIN encryption keys

If the BlackBerry® Policy Service detects that you updated the PIN encryption keys in the BlackBerry Configuration Database, the BlackBerry Policy Service verifies which BlackBerry device users require a new key and then schedules a certain number of users at equal intervals over the next 60 second period. The default setting is 60, or one process per second. You can adjust the number of users that the BlackBerry Policy Service schedules over the 60 second interval using throttling.

The BlackBerry Policy Service only applies throttling when it automatically detects updates to the PIN encryption keys. The BlackBerry database notification system starts automatic detection. If you turn off the BlackBerry database notification system, a five-minute timer starts automatic detection.

#### Configure BlackBerry Policy Service throttling for PIN encryption keys

1. Copy the BlackBerry® Enterprise Server Express installation files to a computer that hosts the BlackBerry Enterprise Server Express instance.
2. Extract the contents to a folder on the computer.
3. At the command prompt, navigate to `<extracted_folder>\tools`.
4. To configure the maximum number of processes for PIN encryption keys that a BlackBerry Policy Service can process at one time before it schedules additional processes, type `traittool -global -trait PolicyThrottlingP2PKeyRate -set <value>`, where `<value>` is 0 or greater. The default value is 60. If you configure a value of 0, the BlackBerry Policy Service will not throttle the processes to update PIN encryption keys.
5. Press ENTER.

Example: Configuring the maximum number of processes for PIN encryption keys

If you want to configure the maximum number of processes for PIN encryption keys to 30, you can type `traittool -global -trait PolicyThrottlingP2PKeyRate -set 30`.

### Configuring BlackBerry Policy Service throttling for application polling

The BlackBerry® Policy Service performs application polling to verify when it must send applications to all BlackBerry devices that are associated with the BlackBerry® Enterprise Server Express instance that the BlackBerry Policy Service runs on. You can configure BlackBerry Policy Service throttling on a BlackBerry Enterprise Server Express instance to limit the database usage of the BlackBerry Policy Service when it sends applications to devices.

If you do not configure throttling, the BlackBerry Policy Service tries to process tasks as fast as the server permits, which might result in an unexpected increase in CPU usage and database usage. If you configure throttling, the BlackBerry Policy Service sends applications to devices using the same method that it uses to throttle IT policies and service books.
Configure BlackBerry Policy Service throttling for application polling

1. Copy the BlackBerry® Enterprise Server Express installation file to a computer that hosts the BlackBerry Enterprise Server Express instance.
2. Extract the contents to a folder on the computer.
3. At the command prompt, navigate to `<extracted_folder>\tools`.
4. Perform one of the following actions:
   • To configure the BlackBerry Policy Service to send applications using the same method that it uses to throttle IT policies and service books, type `traittool -global -trait PolicyThrottlingAppPush -set true`.
   • To configure the BlackBerry Policy Service to not send applications using throttling, and to process the requests as quickly as possible, type `traittool -global -trait PolicyThrottlingAppPush -set false`. The default value is false.
5. Press ENTER.

Delete a BlackBerry Policy Service throttling setting

1. Copy the BlackBerry® Enterprise Server Express installation files to a computer that hosts a BlackBerry Enterprise Server Express instance.
2. Extract the contents to a folder on the computer.
3. At the command prompt, navigate to the Tools folder where the TraitTool.exe file is located.
4. Type `traittool -global -trait <trait_name> -erase`, where `<trait_name>` is the configuration that you want to delete.
5. Press ENTER.

Example: Deleting a BlackBerry Policy Service throttling setting

If you want to delete the maximum number of IT policies and service books that all BlackBerry Policy Service instances can send to BlackBerry devices each minute, type `traittool -global -trait PolicyThrottlingMaxDomainJobs -erase`.

Change the port number that BlackBerry Enterprise Server Express components use to connect to the BlackBerry Configuration Database

You can change the static port number that BlackBerry® Enterprise Server Express components use if you changed the port number that the BlackBerry Configuration Database uses after you install the BlackBerry Enterprise Server Express.
By default, the BlackBerry Configuration Database accepts TCP/IP connections to port 1433 on a Microsoft® SQL Server®. The BlackBerry Configuration Database accepts connections through ports 1024 to 65535.

1. On the computer that hosts the BlackBerry Enterprise Server Express component, open the BlackBerry Configuration Panel.
2. In the **Database Connectivity** tab, in the **Use dynamic ports or specify SQL port** field, type the port number.
3. Click **Apply**.
4. Click **OK**.
5. In the Windows® Services, restart the appropriate service for the BlackBerry Enterprise Server Express component.
6. Repeat steps 1 to 5 on each computer that hosts a BlackBerry Enterprise Server Express component that connects to the BlackBerry Configuration Database.

**Related topics**

## Change the port number that the syslog tools use to monitor BlackBerry Enterprise Server Express events

You can change the port number that the syslog tools listen on to monitor BlackBerry® Enterprise Server Express events. By default, the syslog tools listen to events for the BlackBerry Enterprise Server Express on port 514.

1. On the computer that hosts the BlackBerry Enterprise Server Express component, open the Windows® Registry Editor.
2. Perform one of the following actions:
   - If you are running a 32-bit version of Windows, navigate to HKEY_LOCAL_MACHINE\Software\Research In Motion\BlackBerry Enterprise Server.
   - If you are running a 64-bit version of Windows, navigate to HKEY_LOCAL_MACHINE\Software\WOW6432Node\Research In Motion\BlackBerry Enterprise Server.
3. In the **Logging Info** registry key, click a BlackBerry Enterprise Server Express component.
4. If the DWORD value does not exist, create a DWORD value that you name *(Default)*.
5. Change the DWORD value to the port number that the syslog tools listen on.
6. Click **OK**.
7. In the Windows Services, restart the service for the BlackBerry Enterprise Server Express component.

**Related topics**

BlackBerry Controller and BlackBerry Enterprise Server Express Component Monitoring

How the BlackBerry Controller monitors the BlackBerry Enterprise Server Express components

The BlackBerry® Controller enables the BlackBerry® Enterprise Server Express to continue running if nonresponsive threads occur or BlackBerry Enterprise Server Express services become inactive. The BlackBerry Controller monitors the BlackBerry Messaging Agent, the extension plug-ins for the BlackBerry Messaging Agent, and the BlackBerry Dispatcher so that the BlackBerry Controller can detect when to start, restart, or stop the services. The BlackBerry Controller can also restart other BlackBerry Enterprise Server Express services if they stop responding.

Services that require database access are installed in manual start mode and the BlackBerry Controller starts the services when the BlackBerry Dispatcher verifies the connection to the database. Other services are installed in automatic start mode, and by default, the BlackBerry Controller restarts the services if the BlackBerry Controller detects that the services are inactive. By default, the BlackBerry Controller also restarts services if the BlackBerry Controller detects nonresponsive threads or that a service is inactive for a long period of time.

Registry keys determine how the BlackBerry Controller monitors the BlackBerry Enterprise Server Express components and restarts the services that are associated with the components. You can change the default behavior of the BlackBerry Controller by creating new registry keys and changing the default values of the registry keys.

Change how the BlackBerry Controller restarts the BlackBerry Messaging Agent

Before you begin: To create a user.dmp file, or to use a user.dmp file as a data collection option, you must download and install the User Mode Process Dumper application that is included as a part of the Microsoft® OEM Support Tools.

1. On the computer that hosts the BlackBerry® Enterprise Server Express, open the Registry Editor.
2. In the left pane, perform one of the following actions:
   - If you are running a 32-bit version of Windows®, navigate to HKEY_LOCAL_MACHINE\Software\Research In Motion\BlackBerry Enterprise Server.
   - If you are running a 64-bit version of Windows, navigate to HKEY_LOCAL_MACHINE\Software\WOW6432Node\Research In Motion\BlackBerry Enterprise Server.
3. Click Controller.
4. Perform any of the following tasks:

**Change how the BlackBerry Controller restarts a BlackBerry Enterprise Server Express service**

By default, the BlackBerry® Controller restarts a BlackBerry® Enterprise Server Express service if it stops responding.

1. On the computer that hosts the BlackBerry Enterprise Server Express component that you want to change, open the Registry Editor.

2. In the left pane, perform one of the following actions:
   - If you are running a 32-bit version of Windows®, navigate to HKEY_LOCAL_MACHINE\Software\Research In Motion.
   - If you are running a 64-bit version of Windows, navigate to HKEY_LOCAL_MACHINE\Software \WOW6432Node\Research In Motion.

3. Perform any of the following tasks:

<table>

BlackBerry Enterprise Server Alert Tool

Configuring notifications using the BlackBerry Enterprise Server Alert Tool

You can use the BlackBerry® Enterprise Server Alert Tool to monitor the Windows Event Log™ and send users that you define as notification recipients a notification message when the tool records a critical, error, warning, or informational event. You must configure notification settings for each BlackBerry® Enterprise Server Express in your organization’s BlackBerry Domain.

Change the default event monitoring level

By default, the BlackBerry® Enterprise Server Alert Tool monitors critical events only.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Alert.
2. Click the instance that you want to change.
3. Click Edit instance.
4. In the SMTP host name field, type the SMTP host name of your organization’s gateway in DNS format (for example, smtp.CompanyName.com).
5. In the SMTP account name field, type the name of the SMTP account that you want to send notifications from.
6. In the SMTP from address field, type the SMTP address that you want to send notifications and receive replies to notifications.
7. In the Event level drop-down list, click one of the following menu items:
   - To monitor level 0 events (critical), click Critical.
   - To monitor all events up to and including level 1 (critical and error), click Error.
   - To monitor all events up to and including level 2 (critical, error, and warning), click Warning.
   - To monitor all events up to and including level 3 (critical, error, warning, and informational), click Informational.
8. Click OK.

Define a notification recipient

You can specify a notification recipient for the BlackBerry® Enterprise Server Alert Tool so that the contact receives notification messages in email or popup messages that appear on the screen. You can send popup messages to the contact if the Messenger service for Windows® is running on the computer that you installed the BlackBerry Enterprise Server Alert Tool on, and if the computer is not running Windows Server® 2008. The contact receives popup messages only if the Messenger service is running on the contact’s computer.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Alert.
2. Click the instance that you want to change.

3. Click Edit instance.

4. In the User name field, type the name of the contact.

5. In the Event level drop-down list, click one of the following menu items:
   • To send notification messages for the default event monitoring level, click Default.
   • To send notification messages for all events up to and including level 1 (critical and error), click Error.
   • To send notification messages for all events up to and including level 2 (critical, error, and warning), click Warning.
   • To send notification messages for all events up to and including level 3 (critical, error, warning, and informational), click Info.

6. In the Email address field, type the recipient's email address.

7. To send notification messages as popup messages on the contact's computer, in the Console field, type the name of the contact's computer.

8. Click OK.

BlackBerry Enterprise Server Express log files

Log files for BlackBerry Enterprise Server Express components

You can use log files to record the activity of BlackBerry® Enterprise Server Express components and troubleshoot issues with the components. The BlackBerry Enterprise Server Express creates a log file for each BlackBerry Enterprise Server Express component and saves the log files on the computer that hosts the BlackBerry Enterprise Server Express. By default, the BlackBerry Enterprise Server Express saves the log files in C:\Program Files\Research In Motion \BlackBerry Enterprise Server\Logs. Each BlackBerry Enterprise Server Express instance saves the log files in folders that it creates daily and organizes by date. To prevent the BlackBerry Enterprise Server Express log files from taking up too much disk space, you can change how BlackBerry Enterprise Server Express components create and delete log files.

The size of log files varies based on the number of users in your BlackBerry Enterprise Server Express environment and the level of user activity. It is a best practice to monitor and control the amount of disk space taken up by the BlackBerry Enterprise Server Express log files.

By default, the BlackBerry Enterprise Server Express names log files <server_name>_ <component_identifier>_<instance>_<yyyymmdd>_<log_number>.txt (for example, BBServer01_MAGT_01_20070120_0001.txt). An event that the BlackBerry Enterprise Server Express writes to a log file begins with a five-digit number, where the first digit represents the logging level. For example, the following log file entry logs level 3, which are informational level events: [30000] (03/12 14:03:42.315):{0x18CC} [ENV] Computer Host Name: host_name.

Changing the location where BlackBerry Enterprise Server Express components save log files

Change the location where BlackBerry Enterprise Server Express components save log files

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Logging.
2. Click the instance that contains the logging settings that you want to change.
3. Click Edit instance.
4. In the General section, in the Log file path field, type the path where you want to save the log files.
5. Click Save all.
6. On each computer that hosts a BlackBerry® Enterprise Server Express component or BlackBerry Enterprise Server Express service, in the Windows® Services, restart the BlackBerry Enterprise Server Express services.

Related topics
Restarting BlackBerry Enterprise Server Express components, 277
Store the log files for BlackBerry Enterprise Server Express components in one folder

You can store the log files for BlackBerry® Enterprise Server Express components in one folder instead of permitting the BlackBerry Enterprise Server Express to save the log files in folders that it creates daily and organizes by date.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Logging.
2. Click the instance that contains the logging settings that you want to change.
3. Click Edit instance.
4. In the General section, in the Create folder for daily logs drop-down list, click False.
5. Click Save all.
6. On each computer that hosts a BlackBerry Enterprise Server Express component or BlackBerry Enterprise Server Express service, in the Windows® Services, restart the BlackBerry Enterprise Server Express services.

Changing how BlackBerry Enterprise Server Express components create log files

Add a prefix to the file names of the log files for BlackBerry Enterprise Server Express components

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Logging.
2. Click the instance that contains the logging settings that you want to change.
3. Click Edit instance.
4. In the General section, in the Log file prefix field, type the prefix that you want to add to the log files.
5. Click Save all.
6. On each computer that hosts a BlackBerry® Enterprise Server Express component or BlackBerry Enterprise Server Express service, in the Windows® Services, restart the BlackBerry Enterprise Server Express services.

Restarting BlackBerry Enterprise Server Express components, 277

Change the maximum size of the log file for a BlackBerry Enterprise Server Express component

When the log file for a BlackBerry® Enterprise Server Express component reaches its maximum size, the BlackBerry Enterprise Server Express either creates an additional log file for the component or overwrites the current one, depending on whether you turn on log auto-roll.

By default, log auto-roll is turned on for all BlackBerry Enterprise Server Express components, which means that the BlackBerry Enterprise Server Express creates an additional log file when the current log file reaches its maximum size.
You can specify a different maximum size for each log file.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Logging.
2. Click the instance that contains the logging settings that you want to change.
3. On the Logging details tab, click Edit instance.
4. In each section, in the Maximum size of daily log files (MB) field, type the file size.
5. Click Save all.
6. On the Servers and components menu, locate and restart the components that contain the logging settings that you changed.

Restarting BlackBerry Enterprise Server Express components, 277

Change the logging level for a BlackBerry Enterprise Server Express component

You can select whether the information that you save to the log files is detailed or limited by changing the logging level for a BlackBerry® Enterprise Server Express component. A more detailed logging level can help you troubleshoot issues with a BlackBerry Enterprise Server Express component.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Logging.
2. Click the instance that contains the logging settings that you want to change.
3. On the Logging details tab, click Edit instance.
4. In each section, in the Log level drop-down list, click one of the following menu items:
   • To write error messages to the log files, click Error.
   • To write warning messages to the log files, click Warning.
   • To write daily activities to the log files, click Information.
   • To write additional information to the log files that can help you troubleshoot issues with your organization's environment, click Debug.
5. Click Save all.
6. On the Servers and components menu, locate and restart the components that contain the logging settings that you changed.

Restarting BlackBerry Enterprise Server Express components, 277
Create an additional log file for a BlackBerry Enterprise Server Express component when the current log file reaches its maximum size

If you turn on log auto-roll for a BlackBerry® Enterprise Server Express component, the BlackBerry Enterprise Server Express creates a new log file for the component when the current log file reaches the maximum size. If you turn off log auto-roll for a BlackBerry Enterprise Server Express component, the BlackBerry Enterprise Server Express overwrites the current log file for the component when the log file reaches the maximum size. By default, log auto-roll is turned on for all BlackBerry Enterprise Server Express components.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Logging.
2. Click the instance that contains the logging settings that you want to change.
3. On the Logging details tab, click Edit instance.
4. In each section, in the Log auto-roll drop-down list, click True.
5. Click Save all.
6. On the Servers and components menu, locate and restart the components that contain the logging settings that you changed.

Change the identifier of the log file for a BlackBerry Enterprise Server Express component

You can identify the log file for a BlackBerry® Enterprise Server Express component by the identifier that is included in the file name. For example, a log file that is named BBServer01_SYNC_01_20080120_001.txt uses the default component identifier SYNC to identify the BlackBerry Synchronization Service component.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Logging.
2. Click the instance that contains the logging settings that you want to change.
3. On the Logging details tab, click Edit instance.
4. In each section, in the Log identifier field, type a new identifier name.
5. Click Save all.
6. On the Servers and components menu, locate and restart the components that contain the logging settings that you changed.

Change the character encoding of the log file for a BlackBerry Enterprise Server Express component

You can change the character encoding of the log files of a BlackBerry® Enterprise Server Express component so that the encoding supports the tools that you use to parse and examine the log files. You can specify a different character encoding for each BlackBerry Enterprise Server Express component. You can use the ANSI®, UTF-8, and UTF-16LE character encoding methods.

1. In the BlackBerry Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Logging.
2. Click the instance that contains the logging settings that you want to change.
3. On the Logging details tab, click Edit instance.
4. In each section, in the Log encoding drop-down list, click one of the following character encodings:
   • ANSI
   • UTF-8
   • UTF-16LE
5. Click Save all.
6. On the Servers and components menu, locate and restart the components that contain the logging settings that you changed.
Restore logging settings to default values for all components

1. In the BlackBerry® Administration Service, on the Servers and components menu, expand BlackBerry Solution topology > BlackBerry Domain > Component view > Logging.
2. Click the instance that you want to restore to default values.
3. On the Logging details tab, click Edit instance.
4. Click Reset logging defaults.
5. Click Save all.
6. For the changes to take effect, perform any of the following actions to restart the BlackBerry® Enterprise Server Express services:
   • To restart services other than the BlackBerry Administration Service, on the Servers and components menu, locate and restart the services that you restored to default values.
   • To restart the BlackBerry Administration Service, on the computer that hosts the BlackBerry Administration Service, in the Windows® Services, restart the BlackBerry Administration Service - Native Code Container service.

### Using BlackBerry MDS Connection Service log files to view information for proxied connections to BlackBerry devices

The BlackBerry® Enterprise Server Express writes data for each BlackBerry device connection that the BlackBerry MDS Connection Service proxies in the BlackBerry MDS Connection Service log files.

You can find the BlackBerry MDS Connection Service log files on the computer that hosts the BlackBerry Enterprise Server Express. You can identify BlackBerry MDS Connection Service log files by the component identifier MDAT in the log file name.

**Log file example: BlackBerry device user initiates the proxied connection**

```
<AYER = IPPP, DEVICEPIN = u29, DOMAINNAME = test.rim.net, CONNECTION_TYPE = DEVICE_CONN, CONNECTIONID = 852164874, DURATION(ms) = 3500, MFH_KBytes = 0.908, MTH_KBytes = 38.218, MFH_PACKET_COUNT = 1, MTH_PACKET_COUNT = 2>
```

**Log file example: BlackBerry Enterprise Server Express initiates the proxied connection (push)**

```
<AYER = IPPP, DEVICEPIN = <devicepin>, DOMAINNAME = kmtestd, CONNECTION_TYPE = PUSH_CONN, CONNECTIONID = -432667474, DURATION(ms) = 600090, MFH_KBytes = 0, MTH_KBytes = 10.477, MFH_PACKET_COUNT = 0, MTH_PACKET_COUNT = 4>
```

Troubleshooting

Troubleshooting: Connecting to the BlackBerry Administration Service

The web browser displays an HTTP 404 or HTTP 504 error message when it tries to connect to a BlackBerry Administration Service instance.

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Possible solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>You created a BlackBerry® Administration Service pool using DNS round robin and you stopped the BlackBerry Administration Service services for the BlackBerry Administration Service instance that you currently use. Although you stopped the BlackBerry Administration Service services, it might take some time before the BlackBerry Administration Service instance completes the shutdown process. During this time, if the web browser sends an HTTP request to the BlackBerry Administration Service instance, the BlackBerry Administration Service instance accepts the request because the connection is still available. However, while the BlackBerry Administration Service instance processes the request, it completes its shutdown process and the connection becomes unavailable. The web browser displays an error message.</td>
<td>Wait a few seconds and then try to click a link in the BlackBerry Administration Service console again. The web browser redirects you to an instance in the BlackBerry Administration Service pool that is running and the web browser displays the login page for the instance.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>The BlackBerry Administration Service cannot connect to the BlackBerry Configuration Database.</td>
<td>Verify the BlackBerry Administration Service can access the BlackBerry Configuration Database. If necessary, restart the BlackBerry Configuration Database.</td>
</tr>
</tbody>
</table>

Troubleshooting: BlackBerry Enterprise Server Express Performance

A BlackBerry Enterprise Server Express that you installed remotely from the BlackBerry Configuration Database uses an unexpected amount of system resources and increases wireless network traffic.

Possible cause
Once daily, the BlackBerry® Enterprise Server Express uses the BlackBerry Mailstore Service to refresh the user information from your organization's address book in the BlackBerry Configuration Database. If multiple BlackBerry Enterprise Server Express instances are associated with a BlackBerry Configuration Database, each BlackBerry Enterprise Server Express instance tries to use a BlackBerry Mailstore Service to refresh the address book information in the BlackBerry Configuration Database. The first BlackBerry Mailstore Service that starts the refresh process is responsible for completing it.

If the BlackBerry Mailstore Service that is responsible for completing the refresh process is associated with a BlackBerry Enterprise Server Express that is geographically remote from the BlackBerry Configuration Database, the BlackBerry Mailstore Service can take an unexpected amount of time to complete the refresh process. The refresh process can use an unexpected amount of system resources and increase wireless network traffic.

**Possible solution**

You can use TraitTool.exe to turn off the address book refresh feature for BlackBerry Enterprise Server Express instances that are geographically remote from the BlackBerry Configuration Database. As a result, BlackBerry Enterprise Server Express instances that are located geographically close to the BlackBerry Configuration Database can use the BlackBerry Mailstore Service to refresh the user information from your organization's address book in the BlackBerry Configuration Database.

TraitTool.exe is located in the Tools directory on the BlackBerry Enterprise Server Express installation media.

1. At the command prompt, navigate to the folder that TraitTool.exe is located in.
2. Type: `TraitTool -host <name> -trait MailstoreAddressRefreshEnabled -set False`, where `<name>` is the name of the BlackBerry Enterprise Server Express instance.
3. Press ENTER.

To turn on the address book refresh feature for a BlackBerry Enterprise Server Express again, use the same command with a value of True.

**Microsoft SQL Server uses a considerable amount of disk space**

**Possible cause**

Reorganizing or rebuilding an index in Microsoft® SQL Server® can cause the size of the transaction log file in the BlackBerry® Configuration Database to grow larger than expected.

**Possible solution**

Add the following tasks to the end of your organization's regular maintenance plan:

1. Perform a complete backup of the transaction log file.
2. Perform a shrink log file task on the transaction log file.

**Troubleshooting: Setting up user accounts**
### You cannot create a user account in the BlackBerry Administration Service

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Possible solution</th>
</tr>
</thead>
</table>
| The BlackBerry® Administration Service is configured to use static ports when it connects to the BlackBerry Configuration Database server, but the BlackBerry Configuration Database server uses a dynamic port. | Configure the BlackBerry Administration Service to use a dynamic port for the BlackBerry Configuration Database.  
1. On the computer that hosts the BlackBerry® Enterprise Server Express or BlackBerry Enterprise Server Express components, on the taskbar, click **Start > Programs > BlackBerry Enterprise Server > BlackBerry Server Configuration**.  
2. On the **Database Connectivity** tab, select the **Use dynamic ports or specify SQL port** check box.  
3. Click **OK**.  
4. In the Windows® Services, restart the services for the BlackBerry Administration Service. |

### You cannot find a new user account in the directory using the BlackBerry Administration Service

**Possible solution**

Refresh the list of available user accounts that the BlackBerry® Administration Service can access from the directory. By default, the BlackBerry Administration Service refreshes the list of available user accounts at 12:30 AM daily.

1. In the BlackBerry Administration Service, on the **Servers and components** menu, expand **BlackBerry Solution topology > BlackBerry Domain > Component view**.  
2. Click **Email**.  
3. Click **Refresh available user list from company directory**.  

The background process to refresh the user list starts. The amount of time that the BlackBerry Administration Service requires to refresh the user list depends on the size of the directory.

### Troubleshooting: Messaging

**Messages are not delivered to BlackBerry devices**

**Possible cause**
A third-party application used the BlackBerry® Enterprise Server Express extension API to filter messages that the BlackBerry Enterprise Server Express sends to BlackBerry devices.

**Possible solution**
1. On the computer that stores the BlackBerry Enterprise Server Express event logs, navigate to `<drive>`:\Program Files\Research In Motion\BlackBerry Enterprise Server\Logs.
2. Search for an event that indicates a third-party application filtered a message (for example, [30425] (07/25 00:11:10.274):{0x1700} {megan.ball@blackberry.com} Message is requested to be blocked. EntryId=123786).
3. Perform one of the following actions:
   - Remove the third-party application that uses the BlackBerry Enterprise Server Express extension API.
   - Change the third-party application so that it does not filter messages.

**Text does not appear correctly in Unicode email messages**

**Possible cause**
By default, when the BlackBerry® Enterprise Server Express receives Unicode messages from BlackBerry devices, it uses UTF-8 character encoding to process the Unicode messages. If email applications cannot correctly display Unicode messages, you can configure the BlackBerry Enterprise Server Express to use a different character encoding format when it processes Unicode messages.

**Possible solution**
Change the character encoding that the BlackBerry Enterprise Server Express uses to process Unicode messages.

**Related topics**
Change the character encoding that the BlackBerry Enterprise Server Express uses to send Unicode messages, 58

## Troubleshooting: BlackBerry Web Desktop Manager

**Troubleshooting: Users cannot log in to the BlackBerry Web Desktop Manager**

<table>
<thead>
<tr>
<th>Possible cause</th>

</thead>
<tbody>
<tr>
<td>You might have specified an incorrect URL for the BlackBerry® Configuration Database during the BlackBerry Administration Service installation process.</td>
<td>Change the BlackBerry Configuration Database URL.</td>
</tr>
</tbody>
</table>
### Troubleshooting: Connections to the Wi-Fi network

**A BlackBerry device cannot connect to a Wi-Fi network**

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Possible solution</th>
</tr>
</thead>
</table>
| On the BlackBerry® device, Wi-Fi® connections are not turned on.              | 1. On the BlackBerry device, on the Home screen, click **Manage Connections**.  
2. Click **Wi-Fi Options**.  
3. In the **Wi-Fi** field, verify that a checkmark appears. |
| A Wi-Fi profile is not configured on the BlackBerry device.                   | 1. On the BlackBerry device, on the Home screen, click **Manage Connections**.  
2. In the **Wi-Fi** field, verify that the name of the Wi-Fi network appears.  
If the name does not appear, resend the IT policy to the BlackBerry device, or instruct the user to configure a Wi-Fi profile on the BlackBerry device. |
| The BlackBerry device is not in the wireless coverage area of a wireless access point that has an SSID that is stored in one of the profiles on the BlackBerry device. | Move the BlackBerry device into a wireless coverage area. |
| The SSID of the access point is not configured on the BlackBerry device.      | Check the SSID status indicator in the Wi-Fi status indicator group. The SSID is case-sensitive.  
If the SSID status indicator is not correct, run Set up Wi-Fi in the Setup Wizard on the BlackBerry device again. |
| The Wi-Fi settings on the BlackBerry device, IT policy, or Wi-Fi profile were not configured correctly. | Perform any of the following actions:  
• Using the BlackBerry® Enterprise Server Express, resolve any issues with the IT policy and Wi-Fi profile. Resend the IT policy to the BlackBerry device.  
• On the BlackBerry device, run Set up Wi-Fi in the Setup Wizard again. |
| The user account is not configured correctly.                                | In the BlackBerry Administration Service, resolve any issues with the user account. |
| The BlackBerry device is not assigned to the correct user account.           | In the BlackBerry Administration Service, assign the correct BlackBerry device to the user account. |
| The BlackBerry Enterprise Server Express cannot connect to the BlackBerry device. | Perform the following actions:  
• Ping the BlackBerry device from the BlackBerry Enterprise Server Express.  
• Resolve any connection issues in your organization’s network and with the BlackBerry Router. |
<table>

**A user cannot see Wi-Fi connection settings on a Wi-Fi enabled BlackBerry device**

**Possible cause**

The Wi-Fi® enabled BlackBerry® device is not configured to permit a user to make changes to the Wi-Fi configuration settings.

**Possible solution**

1. In the BlackBerry Administration Service, change the **WLAN Allowed Handheld Changes** configuration setting in the Wi-Fi profile to **Yes**.
2. Resend the IT policy to the BlackBerry device.

**Status indicators**

The status indicators for Wi-Fi® diagnostic information on a BlackBerry device show the status of the BlackBerry® device connection to a Wi-Fi network.

<table>

</table>

**Status fields for UMA or GAN connections**

If your organization’s mobile network provider supports UMA or GAN and your organization subscribes to this service, a UMA/GAN connection group is present on the BlackBerry® device.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
</table>
| Connection Preference      | This field specifies how the BlackBerry device tries to connect to the mobile network provider’s voice and data services. Using the following settings, you or the user can configure how the BlackBerry device accesses the mobile network provider’s voice and data services:  
  - Wi-Fi Preferred: If possible, the BlackBerry device uses a Wi-Fi® connection. When the user is not in a wireless coverage area, the BlackBerry device uses a mobile network connection.  
  - Wi-Fi Only: The BlackBerry device uses a Wi-Fi connection only.  
  - Mobile Network Only: The BlackBerry device uses a mobile network connection to the mobile network provider only.  
  - Mobile Network Preferred: If possible, the BlackBerry device uses a mobile network connection but the BlackBerry device can also use a Wi-Fi connection. |
| UMA Wi-Fi Available        | This field specifies whether the user has a UMA profile. You can safely ignore this status field.                                                                                                           |
| Connection                 | This field specifies whether the BlackBerry device is connected over UMA.                                                                                                                                     |
| Status                     | This field specifies the status of the UMA connection.                                                                                                                                                        |
| Registered UNC Address     | This field specifies the IP address or FQDN of the UNC.                                                                                                                                                       |
| Registration               | This field specifies whether the BlackBerry device is registered with the UNC.                                                                                                                                  |
| Authentication             | This field specifies whether the BlackBerry device is authenticated with the UNC.                                                                                                                               |
| Serving UNC Address        | This field specifies the UNC that the BlackBerry device is connected to.                                                                                                                                         |
| Security Gateway IP        | This field specifies the IP address of the mobile network provider’s security gateway.                                                                                                                        |
### Field Descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Cellular information</strong></td>
<td>This field specifies the GSM® cellular information as received from or sent to the UNC, MNC, MCC, mobile network ID (also known as Cell ID) of the BlackBerry device, and ARFCN.</td>
</tr>
<tr>
<td><strong>Cellular handover to UMA failures</strong></td>
<td>This field specifies errors that the BlackBerry device received during the transition from one network type to the other when the user is on a call.</td>
</tr>
<tr>
<td><strong>Cellular rove-in failures</strong></td>
<td>This field specifies errors that the BlackBerry device received during the transition from one network type to the other when the BlackBerry device is idle.</td>
</tr>
</tbody>
</table>

### Status fields for BlackBerry Infrastructure connections

The connection status indicators for the BlackBerry® Infrastructure appear on a BlackBerry device when a user makes a Wi-Fi® connection or tries to make a Wi-Fi connection.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Address Used</strong></td>
<td>This field specifies the host name or IP address and port number that the BlackBerry device uses to connect to the BlackBerry Infrastructure.</td>
</tr>
<tr>
<td><strong>IP Used</strong></td>
<td>This field specifies the host name or IP address and port number that the BlackBerry device uses to connect to the BlackBerry Infrastructure.</td>
</tr>
<tr>
<td><strong>Connecting</strong></td>
<td>This field specifies the IP address and port number that the BlackBerry device uses to connect to the BlackBerry Infrastructure.</td>
</tr>
<tr>
<td><strong>Authenticating router</strong></td>
<td>This field specifies the IP address of the server that performs authentication, if applicable.</td>
</tr>
<tr>
<td><strong>Authenticating server</strong></td>
<td>This field specifies the IP address of the server that performs authentication.</td>
</tr>
<tr>
<td><strong>Last Contact At</strong></td>
<td>This field specifies the last time that the BlackBerry device had contact with the BlackBerry® Enterprise Server Express through the BlackBerry Infrastructure.</td>
</tr>
</tbody>
</table>

### Status fields for Enterprise connections

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>UIDs</strong></td>
<td>This field specifies the SRP UID of the BlackBerry® Enterprise Server Express that hosts the user account for the BlackBerry device.</td>
</tr>
<tr>
<td><strong>Address Used</strong></td>
<td>This field specifies the host name or IP address and port number that the BlackBerry device uses to connect to the BlackBerry® Infrastructure.</td>
</tr>
<tr>
<td><strong>IP Used</strong></td>
<td>This field specifies the host name or IP address and port number that the BlackBerry device uses to connect to the BlackBerry Infrastructure.</td>
</tr>
<tr>
<td><strong>Connecting</strong></td>
<td>This field specifies the IP address and port number that the BlackBerry device uses to connect to the BlackBerry Infrastructure.</td>
</tr>
</tbody>
</table>
Field | Description
--- | ---
Authenticating router | This field specifies the IP address of the server that performs authentication, if applicable.
Authenticating server | This field specifies the IP address of the server that performs authentication.
Last Contact At | This field specifies the last time that the BlackBerry device had contact with the BlackBerry Enterprise Server Express through the BlackBerry Infrastructure.

A BlackBerry device cannot open a VPN connection

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Possible solution</th>
</tr>
</thead>
</table>
| The connection to the VPN concentrator is not configured correctly. | • Verify that the VPN is turned on.  
• Ping the IP address of the VPN concentrator.  
• Verify that the VPN concentrator host name resolves to an IP address. If it does not, configure the VPN IP address. |
| The VPN authentication method is not configured correctly. | • Verify that the VPN server supports the security parameters.  
• Verify that the VPN login information for the user account are correct. |

A BlackBerry device cannot connect to the mobile network using UMA or GAN

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Possible solution</th>
</tr>
</thead>
</table>
| The UMA connection is not configured correctly. | 1. On the BlackBerry® device, in the device options, click Mobile Network.  
2. Verify that Wi-Fi Preferred is selected.  
3. On the Mobile Network screen, verify that the Connection Preference icon is displayed.  
4. If the Connection Preference icon does not display, at the Network icon, type ALT-GANN to turn on UMA connectivity. |
| The UMA profile is not configured correctly. | 1. On the BlackBerry device, in the device options, click UMA.  
2. Verify whether a UMA profile exists.  
3. If a UMA profile does not exist, create one using the credentials of the mobile network provider.  
4. Verify that for the currently selected UMA profile, the mobile network provider’s security gateway certificate field is not empty and is associated with a certificate for the corresponding mobile network provider. |
### Possible cause
The BlackBerry device is not connected to the Wi-Fi® network or has not registered on a UNC.

### Possible solution
1. On the BlackBerry device, on the **Wi-Fi Diagnostics** screen, verify that the BlackBerry device is connected to a Wi-Fi network.
2. Connect a computer to the wireless access point.
3. To verify the IP address of the BlackBerry device, on the **Wi-Fi Diagnostics** screen, ping the computer.
4. If you do not receive a response to the ping, the reason for this error is an issue on the Wi-Fi network.
5. If you receive a response to the ping but the BlackBerry device does not display a success message, check the **Status** field for a reason for this error.

---

**Verify whether a BlackBerry device can resolve an IP address**

If a BlackBerry® device cannot connect to a Wi-Fi® network, you can determine which connections the BlackBerry device cannot make to it. You can ping the IP address of another wireless device, the Wi-Fi gateway, a VPN concentrator, the UNC of the mobile network provider, or the BlackBerry Router.

A user can ping network servers from a BlackBerry device to check the availability and responsiveness of network servers.

1. On the BlackBerry device, on the Home screen, click **Manage connections**.
2. Click **Wi-Fi Options**.
3. Press the **Menu** key, and click **Wi-Fi Tools > Ping**.
4. In the **Ping Type** field, perform one of the following actions:
   - To ping another wireless device, click **IP or Name**.
   - To ping the BlackBerry device, click **Self**.
   - To ping the security gateway, click **WLAN Gateway**.
   - To ping the VPN concentrator, click **VPN Concentrator**.
   - To ping the UNC of the mobile network provider, click **UNC**.
   - To ping the BlackBerry Router, click **BBR**.
5. In the **Ping to** field, type the IP address that you want to ping.
6. In the **Number of Pings** field, type the number of times that you want to ping the IP address.
7. On the menu, click **Send ping**.

---

**Look up a computer name to resolve an IP address**

Using a BlackBerry® device, a user can look up a computer name in the DNS server to resolve network or domain names and IP addresses.

1. On the BlackBerry device, on the Home screen, click **Manage connections**.
2. Click **Wi-Fi Options**.
3. Press the **Menu** key and click **Wi-Fi Tools > DNS Lookup**.
4. In the **Host** field, type a name or an IP address that you want to look up.
5. Press the **Menu** key and click **DNS Lookup**.
6. Press the **Menu** key and click **Send ping**.

## Troubleshooting: BlackBerry Administration Service pools

**BlackBerry Administration Service instances located in different network segments are not connecting to each other**

### Possible cause

If BlackBerry® Administration Service instances are located in different network segments that are separated by a firewall, the firewall can block the dynamic ports on the BlackBerry Administration Service.

### Possible solution

Perform the following actions:

1. Make sure that you configured the BlackBerry Administration Service instances to communicate across network subnets using TCP with TCP ping, instead of multicast UDP.
2. On each computer that hosts a BlackBerry Administration Service instance, navigate to `<drive>:\Program Files \Research in Motion\BlackBerry Enterprise Server\BAS\server\default\conf`.
3. In a text editor, open **service-port-bindings.xml**.
4. Move the line `<attribute name="secondaryBindPort">xyz</attribute>` that is located inside the comment tags outside of the comment tags.
5. Change **xyz** to an available port, for example port 14458.
6. Add the port that you configured in step 5 to the firewall.
Glossary

AAA
Authentication, Authorization, Accounting

AES
Advanced Encryption Standard

ACL
An access control list (ACL) is a list of permissions that are associated with an object, such as a file, directory, or other network resource. It specifies which users or components have permission to perform specific operations on an object.

ACP
ANSI® code page

AES
Advanced Encryption Standard

AES-CCMP
Advanced Encryption Standard Counter Mode CBCMAC Protocol

ANSI
American National Standards Institute

API
application programming interface

ARFCN
absolute radio frequency channel

ASCII
American Standard Code for Information Interchange

BCC
blind carbon copy

BlackBerry CAL
A BlackBerry® Client Access License (BlackBerry CAL) limits how many users you can add to a BlackBerry® Enterprise Server.

BlackBerry Domain
A BlackBerry Domain consists of the BlackBerry Configuration Database with its users and any BlackBerry® Enterprise Server instances that connect to it.
BlackBerry MDS
BlackBerry® Mobile Data System

**BlackBerry transport layer encryption**
BlackBerry transport layer encryption (formerly known as standard BlackBerry encryption) uses a symmetric key encryption algorithm to help protect data that is in transit between a BlackBerry device and the BlackBerry® Enterprise Server when the data is outside an organization's firewall.

**CDMA**
Code Division Multiple Access

**CDO**
Collaboration Data Object

**CLDC**
Connected Limited Device Configuration

**CMIME**
Compressed Multipurpose Internet Mail Extension

**content protection**
Content protection helps protect user data on a locked BlackBerry device by encrypting the user data using the content protection key and ECC private key.

**CRL**
certificate revocation list

**CSR**
certificate signing request

**DES**
Data Encryption Standard

**device transport key**
The device transport key (formerly known as the master encryption key) is unique to a BlackBerry device. The BlackBerry device and BlackBerry® Enterprise Server use the device transport key to encrypt the message keys.

**DFS**
distributed file system

**DHCP**
Dynamic Host Configuration Protocol

**DNS**
A Domain Name System (DNS) is an Internet database that translates domain names that are meaningful and recognizable by people into the numeric IP addresses that the Internet uses.

**DOM**

Document Object Model

**DSML**

Directory Service Markup Language

**DSML-enabled server**

A BlackBerry device uses a DSML-enabled server to search for and download certificates.

**EAP-FAST**

Extensible Authentication Protocol Flexible Authentication via Secure Tunneling

**EAP-GTC**

Extensible Authentication Protocol Generic Token Card

**EAP-TLS**

Extensible Authentication Protocol Transport Layer Security

**EAP-TTLS**

Extensible Authentication Protocol Tunneled Transport Layer Security

**EAP**

Extensible Authentication Protocol

**Enterprise Service Policy**

The Enterprise Service Policy controls which BlackBerry devices can connect to a BlackBerry® Enterprise Server.

**ETP**

Email Transfer Protocol

**FQDN**

fully qualified domain name

**GAN**

generic access network

gateway message envelope
The gateway message envelope protocol is a Research In Motion proprietary protocol that allows the transfer of compressed and encrypted data between the wireless network and BlackBerry devices. The protocol defines a routing layer that specifies the types of message contents allowed and the addressing information for the data. Gateways and routing components use this information to identify the type and source of the BlackBerry device data, and the appropriate destination service to route the data to.

**GPO**
Group Policy Object

**GPS**
Global Positioning System

**HTML**
Hypertext Markup Language

**HTTP**
Hypertext Transfer Protocol

**HTTPS**
Hypertext Transfer Protocol over Secure Sockets Layer

**IIS**
Internet Information Services

**IP address**
An Internet Protocol (IP) address is an identification number that each computer or mobile device uses when it sends or receives information over a network, such as the Internet. This identification number identifies the specific computer or mobile device on the network.

**IPPP**
Internet Protocol Proxy Protocol

**IPsec**
Internet Protocol Security

**IT administration command**
An IT administration command is a command that you can send over the wireless network to protect sensitive information on a BlackBerry device or delete all BlackBerry device data.

**IT policy**
An IT policy consists of various IT policy rules that control the security features and behavior of BlackBerry smartphones, BlackBerry® PlayBook™ tablets, the BlackBerry® Desktop Software, and the BlackBerry® Web Desktop Manager.
IT policy rule
An IT policy rule permits you to customize and control the actions that BlackBerry smartphones, BlackBerry®
PlayBook™ tablets, the BlackBerry® Desktop Software, and the BlackBerry® Web Desktop Manager can perform.

Java ME
Java® Platform, Micro Edition

JDE
Java® Development Environment

JNDI
Java® Naming and Directory Interface

JRE
Java® Runtime Environment

LAN
local area network

LDAP
Lightweight Directory Access Protocol

LDAPS
Lightweight Directory Access Protocol over SSL

LEAP
Lightweight Extensible Authentication Protocol

LED
light-emitting diode

LTPA
Lightweight Third-Party Authentication

MAC
message authentication code

MAPI
Messaging Application Programming Interface

MCC
mobile country code

messaging server
A messaging server sends and processes messages and provides collaboration services, such as updating and communicating calendar and address book information.

MIDP
Mobile Information Device Profile

MIME
Multipurpose Internet Mail Extensions

MNC
mobile network code

MTLS
Mutual Transport Layer Security

NAT
network address translation

NSPI
Name Service Provider Interface

NTLM
NT LAN Manager

OCSP
Online Certificate Status Protocol

OEM
original equipment manufacturer

PAC
proxy auto-configuration

PAP
Push Access Protocol

PEAP
Protected Extensible Authentication Protocol

PIM
personal information management

PIN
personal identification number

  pre-shared key

RMI
  Record Management System

RPC
  remote procedure call

RTF
  Rich Text Format

SAN
  subject alternative name

S/MIME
  Secure Multipurpose Internet Mail Extensions

SMS
  Short Message Service

SMTP
  Simple Mail Transfer Protocol

SNMP
  Simple Network Management Protocol

SPN
  service principal name

SQL
  Structured Query Language

SRP
  Server Routing Protocol

SRP ID
The SRP ID is a unique identifier for the BlackBerry® Enterprise Server that the BlackBerry Enterprise Server uses to identify itself to the BlackBerry® Infrastructure during SRP authentication.

SSID
service set identifier

SSL
Secure Sockets Layer

TCP
Transmission Control Protocol

TCP/IP
Transmission Control Protocol/Internet Protocol (TCP/IP) is a set of communication protocols that is used to transmit data over networks, such as the Internet.

TKIP
Temporal Key Integrity Protocol

TLS
Transport Layer Security

Triple DES
Triple Data Encryption Standard

UCS
Universal Content Stream

UDP/IP
User Datagram Protocol/Internet Protocol

UDP
User Datagram Protocol

UID
unique identifier

UMA
Unlicensed Mobile Access

UNC
Universal Naming Convention

USB
Universal Serial Bus

UTF
UCS Transformation Format

UTF-8
8-bit UCS/Unicode Transformation Format

UTF-16LE
UCS Transformation Format 16 Little Endian

OR NON-PERFORMANCE OF ANY SOFTWARE, HARDWARE, SERVICE, OR ANY THIRD PARTY PRODUCTS AND SERVICES REFERENCED HEREIN, ARE HEREBY EXCLUDED. YOU MAY ALSO HAVE OTHER RIGHTS THAT VARY BY STATE OR PROVINCE. SOME JURISDICTIONS MAY NOT ALLOW THE EXCLUSION OR LIMITATION OF IMPLIED WARRANTIES AND CONDITIONS. TO THE EXTENT PERMITTED BY LAW, ANY IMPLIED WARRANTIES OR CONDITIONS RELATING TO THE DOCUMENTATION TO THE EXTENT THEY CANNOT BE EXCLUDED AS SET OUT ABOVE, BUT CAN BE LIMITED, ARE HEREBY LIMITED TO NINETY (90) DAYS FROM THE DATE YOU FIRST ACQUIRED THE DOCUMENTATION OR THE ITEM THAT IS THE SUBJECT OF THE CLAIM.

TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW IN YOUR JURISDICTION, IN NO EVENT SHALL RIM BE LIABLE FOR ANY TYPE OF DAMAGES RELATED TO THIS DOCUMENTATION OR ITS USE, OR PERFORMANCE OR NON-PERFORMANCE OF ANY SOFTWARE, HARDWARE, SERVICE, OR ANY THIRD PARTY PRODUCTS AND SERVICES REFERENCED HEREIN INCLUDING WITHOUT LIMITATION ANY OF THE FOLLOWING DAMAGES: DIRECT, CONSEQUENTIAL, EXEMPLARY, INCIDENTAL, INDIRECT, SPECIAL, PUNITIVE, OR AGGRAVATED DAMAGES, DAMAGES FOR LOSS OF PROFITS OR REVENUES, FAILURE TO REALIZE ANY EXPECTED SAVINGS, BUSINESS INTERRUPTION, LOSS OF BUSINESS INFORMATION, LOSS OF BUSINESS OPPORTUNITY, OR CORRUPTION OR LOSS OF DATA, FAILURES TO TRANSMIT OR RECEIVE ANY DATA, PROBLEMS ASSOCIATED WITH ANY APPLICATIONS USED IN CONJUNCTION WITH RIM PRODUCTS OR SERVICES, DOWNTIME COSTS, LOSS OF THE USE OF RIM PRODUCTS OR SERVICES OR ANY PORTION THEREOF OR OF ANY AIRTIME SERVICES, COST OF SUBSTITUTE GOODS, COSTS OF COVER, FACILITIES OR SERVICES, COST OF CAPITAL, OR OTHER SIMILAR PECUNIARY LOSSES, WHETHER OR NOT SUCH DAMAGES WERE FORESEEN OR UNFORESEEN, AND EVEN IF RIM HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW IN YOUR JURISDICTION, RIM SHALL HAVE NO OTHER OBLIGATION, DUTY, OR LIABILITY WHATSOEVER IN CONTRACT, TORT, OR OTHERWISE TO YOU INCLUDING ANY LIABILITY FOR NEGLIGENCE OR STRICT LIABILITY.

THE LIMITATIONS, EXCLUSIONS, AND DISCLAIMERS HEREIN SHALL APPLY: (A) IRRESPECTIVE OF THE NATURE OF THE CAUSE OF ACTION, DEMAND, OR ACTION BY YOU INCLUDING BUT NOT LIMITED TO BREACH OF CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR ANY OTHER LEGAL THEORY AND SHALL SURVIVE A FUNDAMENTAL BREACH OR BREACHES OR THE FAILURE OF THE ESSENTIAL PURPOSE OF THIS AGREEMENT OR OF ANY REMEDY CONTAINED HEREIN; AND (B) TO RIM AND ITS AFFILIATED COMPANIES, THEIR SUCCESSORS, ASSIGNS, AGENTS, SUPPLIERS (INCLUDING AIRTIME SERVICE PROVIDERS), AUTHORIZED RIM DISTRIBUTORS (ALSO INCLUDING AIRTIME SERVICE PROVIDERS) AND THEIR RESPECTIVE DIRECTORS, EMPLOYEES, AND INDEPENDENT CONTRACTORS.

IN ADDITION TO THE LIMITATIONS AND EXCLUSIONS SET OUT ABOVE, IN NO EVENT SHALL ANY DIRECTOR, EMPLOYEE, AGENT, DISTRIBUTOR, SUPPLIER, INDEPENDENT CONTRACTOR OF RIM OR ANY AFFILIATES OF RIM HAVE ANY LIABILITY ARISING FROM OR RELATED TO THE DOCUMENTATION.

Prior to subscribing for, installing, or using any Third Party Products and Services, it is your responsibility to ensure that your airtime service provider has agreed to support all of their features. Some airtime service providers might not offer Internet browsing functionality with a subscription to the BlackBerry® Internet Service. Check with your service provider for availability, roaming arrangements, service plans and features. Installation or use of Third Party Products and Services with RIM's products and services may require one or more patent, trademark, copyright, or other licenses in order to avoid infringement or violation of third party rights. You are solely responsible for determining whether to use Third Party Products and Services and if any third party licenses are required to do so. If required you are responsible for acquiring them. You should not install or use Third Party Products and Services
until all necessary licenses have been acquired. Any Third Party Products and Services that are provided with RIM's products and services are provided as a convenience to you and are provided "AS IS" with no express or implied conditions, endorsements, guarantees, representations, or warranties of any kind by RIM and RIM assumes no liability whatsoever, in relation thereto. Your use of Third Party Products and Services shall be governed by and subject to you agreeing to the terms of separate licenses and other agreements applicable thereto with third parties, except to the extent expressly covered by a license or other agreement with RIM.

Certain features outlined in this documentation require a minimum version of BlackBerry® Enterprise Server, BlackBerry® Desktop Software, and/or BlackBerry® Device Software.

The terms of use of any RIM product or service are set out in a separate license or other agreement with RIM applicable thereto. NOTHING IN THIS DOCUMENTATION IS INTENDED TO SUPERSEDE ANY EXPRESS WRITTEN AGREEMENTS OR WARRANTIES PROVIDED BY RIM FOR PORTIONS OF ANY RIM PRODUCT OR SERVICE OTHER THAN THIS DOCUMENTATION.

Certain features outlined in this documentation might require additional development or Third Party Products and Services for access to corporate applications.

This product includes software developed by the Apache Software Foundation (www.apache.org/) and/or is licensed pursuant to one of the licenses listed at (www.apache.org/licenses/). For more information, see the NOTICE.txt file included with the software.
