UEM Notifications
Installation and Administration Guide

3.0
What is BlackBerry UEM Notifications?

With UEM Notifications, BlackBerry UEM administrators message users via SMS, phone, and email directly from the UEM console. This add-on simplifies communications to end users and user groups by eliminating the need for additional messaging solutions. BlackBerry UEM Notifications cuts through the clutter of everyday messages, resulting in more users taking action.

BlackBerry UEM Notifications provides the following key capabilities:

- Leverage UEM for simplified communication
- Multiple delivery methods (text, phone, and email)
- Increased engagement from users

Unify communication processes and tools for improved productivity

- **Take control of user messaging:** Effective device management requires UEM administrators to communicate with the users they manage. With UEM Notifications, administrators can manage devices and notifications within their UEM, eliminating the need to manage and reconcile user contact information across multiple systems as well as external system access issues. Managing user messaging from a single solution empowers administrators with more control and improves their productivity.
- **Replace email blasts with messages that users will actually read:** When email is used as the main tool to notify users, messages can easily get lost, overlooked, or ignored, reducing their effectiveness. This leads to increased support calls, raising your costs and hampering productivity. With flexible delivery options such as Text-To-Speech voice calls, SMS, and email, employees get alerts via their preferred channel, increasing the likelihood of action and compliance.
- **Trust that users will receive and view your notifications:** Common communications channels lack an easy way to track and store the status and history of messages, forcing administrators to reconcile against external notification systems. With UEM Notifications’ FedRAMP-authorized delivery services, you can rest easy knowing the messages sent reach their intended destination. UEM Notifications features a comprehensive report of all sent messages and their statuses.

Simplify notifications to users

- **Single interface for messaging users and managing devices:** This “single pane of glass” approach eliminates confusion and streamlines two functions: managing devices, and notifying users of important announcements.
- **Mobile device information identifies which users are affected:** UEM Notifications leverages information collected from mobile devices to identify the specific users who need a given notification. This means there is less noise for the user, because each notification is relevant to them. This targeted approach means that users always know that the alerts they receive are reliable.
- **Improved end-to-end message workflow:** Administrators can test and review messages before sending them broadly to ensure accuracy.
- **Active Directory sync streamlines user data:** Your company’s active directory contains all user data, including telephony, email, and user groups. UEM Notifications leverages contact information via an active directory sync to ensure notifications reach your users.
- **Supports text-to-speech (phone), email, and SMS notifications:** Multiple delivery options enable UEM administrators to choose which methods are best for each type of message.
- **View message details and history:** Track and manage notifications sent including detailed message status by delivery method.
Common use cases

- **Planned downtime:** Inform affected users of scheduled upgrades and outages ahead of time.
- **Manage email outages:** Let affected users know an unexpected outage has occurred and provide an anticipated timeline for the issue to be resolved. This can help you avoid support line flooding.
- **Compliance warning:** Alert users to upgrade their software in order to comply with corporate policies and external regulations.
Software requirements

- UEM Notifications version 1.9 requires UEM release 12.7 or 12.8 and BlackBerry AtHoc release 7.3 or later.
- UEM Notifications version 2.0 requires UEM release 12.9 or later and BlackBerry AtHoc release 7.3 or later.
- UEM Notifications version 3.0 requires UEM release 12.10 or later and BlackBerry AtHoc release 7.3 or later.
Deploy BlackBerry UEM Notifications to a production BlackBerry UEM domain

Follow these instructions when the BlackBerry UEM Notifications plug-in is complete and ready to deploy to a production BlackBerry UEM domain. The deployment process will stop the BlackBerry UEM services for a short time, so you should perform this task when there will be minimal impact to users.

Prerequisite

Before you can deploy BlackBerry UEM Notifications, you must have an account provisioned for you in the BlackBerry AtHoc system. This provisioning provides the needed organization ID, username, and password. To have an account provisioned in the BlackBerry AtHoc system, contact your BlackBerry Technical Sales Manager.

To deploy BlackBerry UEM Notifications, complete the following steps:

1. Go to the Software Download for BlackBerry UEM Notifications page at the following URL:
2. Select BlackBerry UEM Notifications from the list.
3. Click Next.
4. Download and save the ZIP file to your system.
5. Copy the ZIP file to each computer that hosts a production BlackBerry UEM instance, then perform the following steps on each computer:
   a. Open the command line as an administrator and change the directory to <drive>:\Program Files\BlackBerry \UEM\tools\plugins\onprem.
   b. Execute the following command:

   ```
   plugin-deploy.bat --plugins "<file_path>" --iacceptEULA [--update]
   ```

   "<file_path>" is the location of the plug-in package (.zip). The file path must be enclosed in double quotation marks. If you want to integrate more than one plug-in, you can type a comma-separated list of file paths in one set of double quotation marks (for example, "<file_path>,<file_path>,<file_path>").

   Use the --update keyword to update an existing BlackBerry UEM Notifications deployment.

   The command validates the plug-in, integrates it with the BlackBerry UEM components, and restarts the BlackBerry UEM services. This process may take some time (approximately 10 minutes). After the plug-in is integrated, the plug-in files are located at <drive>:\Program Files\BlackBerry\UEM\ext\.
Log in to UEM

The UEM management console allows you to perform administrative tasks for devices in your organization that are managed by BlackBerry UEM.

**Note:** You must have UEM administrator permissions with the "Send email to users" role enabled to access UEM Notifications.

**Before you begin:**
- Locate the web address (for example, https://<hostname>/admin/index.jsp.) and login information for the management console. You can find the information in the inbox of the email account that is associated with your BlackBerry UEM account.
- You must know the authentication method and the domain (applicable for Microsoft Active Directory authentication only).

To log in to UEM, complete the following steps:

1. In the browser, type the web address for the BlackBerry UEM management console of your organization.
2. In the **Username** field, type your username.
3. In the **Password** field, type your password.
4. If necessary, in the **Sign in using** list, do one of the following:
   - Click **Direct authentication**.
   - Click **LDAP authentication**.
   - Click **Microsoft Active Directory authentication**. In the **Domain** field, type the Microsoft Active Directory domain.
5. Click **Sign in**.

**After you finish:** You can change your login password by clicking the user icon in the top-right corner of the management console.
**Synchronize users**

Before you use BlackBerry UEM Notifications, you should ensure that the users in UEM are synchronized with the users in the BlackBerry AtHoc system. You can synchronize UEM users to BlackBerry AtHoc using any of the following methods:

- Synchronize users from UEM to BlackBerry AtHoc using the UEM console
- Synchronize users from UEM to BlackBerry AtHoc using a CSV export-import process
- Synchronize users using Active Directory

UEM users must have reachable devices in the BlackBerry AtHoc system in order to receive UEM notifications. Before you import the UEM users to BlackBerry AtHoc, make sure that each user has data in the BlackBerry AtHoc system for at least one of the following devices:

- Device: Email - Work
- Device: Phone - Work
- Device: Text Messaging

**Synchronize users from UEM to BlackBerry AtHoc directly**

To synchronize users directly from UEM to BlackBerry AtHoc, you can use the UEM console or the CSV export-import process.

**Synchronize users from UEM to BlackBerry AtHoc using the UEM console**

To synchronize users from UEM to BlackBerry AtHoc using the UEM console, complete the following steps:

1. In UEM, on the menu bar, click **Settings > BlackBerry AtHoc > User sync settings**.
2. Select the **Enable user sync** check box.
3. Click **Save**.
4. Click the **Edit attribute mapping and sync schedule** link.
5. Select the **Attribute mapping** tab. The **Map UEM and AtHoc User Attributes** table lists available UEM attributes and their default mapped AtHoc attributes. Select attributes from the UEM and AtHoc Attribute lists to change the default mapping.
6. Click **Save**.
7. (Optional) Select the **Sync schedule** tab to set up a recurring synchronization job. Select a Recurrence from the list. Set a time to start the synchronization in the **Set time** section.
8. Click **Save**.
9. Click **User Sync Settings**.
10. (Optional) Click the **Sync now** button on the User sync settings page to start an on-demand UEM synchronization.

**Synchronize users from UEM to BlackBerry AtHoc using a CSV export-import process**

To synchronize users from UEM to BlackBerry AtHoc using a CSV export-import process, complete the following tasks:

- Export UEM users to a CSV file
- Map the UEM email addresses to Mapping ID and Username in BlackBerry AtHoc
- Import UEM users to BlackBerry AtHoc
Export UEM users to a CSV file

To export UEM users to a CSV file, complete the following steps:
1. In UEM, on the menu bar, click **Users > Managed devices.**
2. Click the **Select all** at the top of the user list and perform any of the following actions:
   - Click **Select all** or select the check box for each column that you want to display. You must include the **Username** column.
   - Clear the check box for each column that you want to remove.
   - Click **Reset** to return to the default selections.
3. To sort the user list, click a column header.
4. To reorder the columns, click a column header and drag it to the left or right.
5. Perform one of the following actions:
   - Select the check box at the top of the user list to select all users.
   - Select the check box for each user that you want to include in the file. You can use Shift+click to select multiple users.
6. Click **Export** and save the file.

Map the UEM email addresses to Mapping ID and Username in BlackBerry AtHoc

To ensure that UEM users receive UEM messages, the email addresses of the UEM users must be mapped to the **Username** and **Mapping ID** in your BlackBerry AtHoc system.

To map the user data, complete the following steps:
1. Open the CSV file you exported from UEM in the previous task.
2. Copy the data in the Contact Email column.
3. Insert a new column called Mapping ID.
4. Paste the data from the Contact Email column into the new Mapping ID column.
5. Rename the Contact Email column to Username.
6. Save the CSV file.

Import UEM users to BlackBerry AtHoc

To import users from the CSV file you exported from BlackBerry UEM, complete the following steps:
1. Log in to the BlackBerry AtHoc management system as an administrator.
2. In the navigation bar, click **Users.**
3. Click the **Users** link.
4. Click the **More Actions** list.
5. Select the **Import** option.
6. Click the **Browse** button.
7. Navigate to the location of the UEM user CSV file on your computer.
8. Open the file to enter or modify the user data.
9. Ensure that columns with multiple values have the correct format to import correctly.
   - The entire entry must be enclosed within double-quotes. This rule is true even if the multi-select picklist has only a single entry.
   - A comma must be used to separate each of the values. There can be no spaces before or after the comma.

   **Examples:**
• This example shows two column names, separated by a comma (no space before or after the comma). **POSITIONS** is a multi-select picklist column.

  **USERNAME,POSITIONS**

• The next example shows a multi-select picklist attribute column with multiple entries.

  Cadiz,"ESH Team Tech Supv,FMT Coordinator,SITE 300,Exercise Call Out,Field Monitoring Team,Coordinator DOC"

  • The entire entry starts and ends with regular double-quote characters (not the "smart quotes" used by some word-processors).
  • Each picklist entry is separated by a comma (no spaces before or after the comma).
  • An entry can have a space within it. For example: Field Monitoring Team

• This example shows a multi-select picklist attribute with a single entry.

  East,"LEDO"

10. After you have entered your data, save and close the file.
11. Open and review the file in Notepad or a text editor utility.

  **Note:** Excel hides some characters from view. If you edit the file in Excel, it might format your entries with extra characters. The incorrect format might cause the import operation to fail.
12. Review the syntax, and then save the modified file as a .txt file.
13. Edit the file name and manually change the extension from .txt to .csv.

  The import function requires a .csv file type. This method preserves the formatting in the text file.
14. Click the filename, and then click Open to upload the file into the system.

  The filename appears in the **User CSV File** field on the Import User File screen. Each of the columns from the import file are listed in the **Select the columns to import** section.
15. (Optional) Select the **Partial User Import Enabled** check box to enable partial user data to be imported. When selected, if a user entry contains an invalid value the rest of the user’s data is still imported.
16. Select each of the columns of data you want to import or click **Select All**.
17. Review the **Columns that cannot be imported** field list to make sure it does not contain important data that you must be able to view within BlackBerry AtHoc. If the list contains important columns of information, contact BlackBerry AtHoc Technical Support for help.
18. Click the **Import** button. The Importing Users window opens. The import happens in batches of 5000 users.
19. While the import is in progress, a **Stop Import** button appears on the Importing Users window. Clicking this button stops the import process immediately and prevents the next batch of users from being imported from the file. However, records that have already been added are not removed and records that have been updated are not restored to previous values.

When the import completes, an import summary screen appears, listing the following information:

• Total number of users in the import file
• Total number of users who were processed
• Number of users who were successfully processed
• Number of users who were partially processed
• Number of users who failed to be processed
• Username of the person who imported the file
• Time the file import process started and ended

For more information about managing users in BlackBerry AtHoc, see the *BlackBerry AtHoc Manage Users Guide*. 
Synchronize users using Active Directory

To synchronize users from UEM to BlackBerry AtHoc using Active Directory, complete the following tasks:

- Synchronize users from Active Directory to UEM
- Synchronize users from Active Directory to BlackBerry AtHoc

Synchronize users from Active Directory to UEM

To synchronize users from Active Directory to UEM, complete the following tasks:

- Create an Active Directory connection
- Configure sync settings and schedule
- Create a group in UEM and link it to a group in Active Directory
- Synchronize user groups
- View a synchronization report

Create an Active Directory connection

To create a connection between UEM and Active Directory, complete the following steps:

1. Log in to BlackBerry UEM.
2. Click Settings > External integration > Company directory. The Company directory connection window opens.
3. Click Add a Microsoft Active Directory connection. The Add a Microsoft Active Directory connection window opens.
4. Enter a name for your connection.
5. Enter your Active Directory username, domain, and password.
6. Leave the Kerberos Key Distribution Center selection and Global catalog selection fields set to their default values.
7. Click Continue. The Company directory connection window opens. The new connection appears in the Configured directory connections table.

Configure sync settings and schedule

1. In the Company directory connection window in UEM, click the name of a connection in the Directory connection column. The Edit a Microsoft Active Directory connection window opens.
2. Select the Sync settings column.
3. Select the Enable directory-linked groups check box.
4. Select the Enable onboarding check box. The Onboarding directory groups table appears.
5. Click + on the Onboarding directory groups table. The Search company directory window opens.
6. Type a name in the search box to find the group you want to synchronize.
7. Select the group in the Directory group name column.
8. Click Add. You are returned to the Edit a Microsoft Active Directory connection screen.
9. Enter a number in the Sync limit field to specify the number of groups that can be synchronized. Enter 0 to configure unlimited groups.
10. Leave all other fields set to their default values.
11. Click Save.
12. Select the Sync schedule tab.
13. In the Synchronization schedule table, click +. The Add a synchronization schedule window opens.
14. Select Interval, Once a day, or No recurrence from the Recurrence list.
15. (Optional) If you selected Interval, specify the interval in the Interval field. Select a time to perform the synchronization.

16. (Optional) If you selected Once a day or Interval, select the days of the week to perform the synchronization.

17. Click Add. You are returned to the Edit a Microsoft Active Directory Connection window.

18. Click Save.

Create a group in UEM and link it to a group in Active Directory

To create a group in UEM and link it to a group in Active Directory, complete the following steps:

1. Log in to BlackBerry UEM.

2. Click Groups.

3. Click the name of a group in the Group name column. The settings page for the selected group opens to the Settings tab.

4. In the Linked directory groups section, click +. The Search company directory window opens.

5. Enter the name of your group in the search field.

6. Select the group and click Add. You are returned to the group settings page. The new group appears in the Linked directory groups section.

Synchronize user groups

To preview and synchronize user groups in UEM and Active Directory, complete the following steps:

1. Log in to UEM.

2. Click Settings > External integration > Company directory. The Company directory connection window opens.

3. Click to preview the results of the user synchronization.

4. Click to begin a manual synchronization.

View a synchronization report

To view a directory synchronization report, complete the following steps:

1. Log in to BlackBerry UEM.

2. Click Settings > External integration > Company directory. The Company directory connection window opens.

3. Click a link to a report in the Last report column. The Directory synchronization report opens in a new window.

4. (Optional) Select a date from the list to view a report for a previous synchronization.

5. (Optional) Click to export the report to a CSV file.

The synchronization report displays the following information:

- Start time, stop time, total time, and status of the synchronization
- User information that was updated in UEM
- Users added to UEM
- Group membership updates in UEM
- Users removed from onboarding groups
- Users removed from UEM
- Devices removed from UEM

Synchronize users from Active Directory to BlackBerry AtHoc

To synchronize users from Active Directory to BlackBerry AtHoc, complete the following tasks:
• Download the AD Sync Tool
• Update the configuration file
• Map attributes and devices to the BlackBerry AtHoc system

Download the AD Sync Tool

To download the AD Sync Tool, complete the following steps:
1. Go to the Software Download for BlackBerry UEM Notifications page at the following URL:
2. Select **AD Sync Tool** from the list.
3. Click **Next**.
4. Download and save the ZIP file to your system.

Update the configuration file

The **AtHocDataIntegration.config** file provides instructions for obtaining LDAP data.

To update the **AtHocDataIntegration.config** file, complete the following steps:
1. Open the **AtHocDataIntegration.config** file in your BlackBerry UEM Notifications package.
2. Update the following Active Directory parameters (**<AdParameters>**):
   - **<server>**—An optional IP address or the LDAP server name. This field can be blank. If blank, the synchronization module searches the default domain controller. For an SSL-secured LDAP, you must specify the fully-qualified domain name of the LDAP server. Specifying the port is optional. By default, the LDAP service port is 389 and the SSL-secured LDAP service port is 636.
   - **<username>**—The username of the account that accesses the LDAP server. If the server is not specified, the username is ignored. For an SSL-secured LDAP server, you must specify a fully-qualified user DN (FQDN). For example: CN=User Common Name,OU=Admin Accounts,DC=SomeDomain,DC=com.
   - **<password>**—The password of the user account which accesses the LDAP server. If the server is not specified, the password is ignored.
   - **<rootNodeDistinguishedName>**—Enter the node in Active Directory that you want to export.
3. Specify the attributes that you want to export from Active Directory in the **<attributes>** parameter.
   Example:
   ```xml
   <attributes>
   <attribute memberExport="true">samaccountname</attribute>
   <attribute>sn</attribute>
   <attribute>givenname</attribute>
   <attribute>displayname</attribute>
   <attribute>userAccountControl</attribute>
   <attribute>Mail</attribute>
   <attribute>Phone</attribute>
   </attributes>
   ```
4. Update the following BlackBerry AtHoc (**<sdkParameters>** ) parameters:
   - **<providerID>**—The ID of the BlackBerry AtHoc organization whose data will be synchronized.
   - **<url>**—The location of your BlackBerry AtHoc server. This parameter must be appended with /sdk/listener/listen.asp.
   - **<username>**—An operator in the BlackBerry AtHoc system with SDK User permissions.
   - **<password>**—The password of an operator with SDK User permissions.
Example:

```
<providerId>1234567</providerId>
<url>https://pilot.athoc.com/sdk/listener/listen.asp</url>
$username>SDKUser1</username>
$password isEncrypted="false">yourpassword</password>
```

5. Save the file.

**Map attributes and devices to the BlackBerry AtHoc system**

To map Active Directory user attributes and devices to the BlackBerry AtHoc system, complete the following steps:

1. Open the `Sample.xml` file in your UEM Notifications package.
2. Update the following Active Directory user attributes to attributes in BlackBerry AtHoc:
   - Mail: Map to the `mid` attribute.
   - givenname: Map to the `firstName` attribute.
   - sn: Map to the `lastName` attribute.

Example:

```
<xsl:element name="user">
  <xsl:attribute name="seqId">
    <xsl:value-of select="position()"/>
  </xsl:attribute>
  <xsl:for-each select="attributes">
    <xsl:element name="mid">
      <xsl:value-of select="Mail"/>
    </xsl:element>
    <xsl:element name="firstName">
      <xsl:value-of select="givenname"/>
    </xsl:element>
    <xsl:element name="lastName">
      <xsl:value-of select="sn"/>
    </xsl:element>
  </xsl:for-each>
</xsl:element>
```

3. Update the following Active Directory device attributes to BlackBerry AtHoc attributes:
   - Mail: Map to the `Email-Work` attribute.
   - phone: Map to the `mobilePhone` attribute.
   - phone: Map to the `sms` attribute.

Example:

```
<xsl:element name="devices">
  <xsl:call-template name="GetDevice">
    <xsl:with-param name="commonName" select="'Email-Work'" />  
    <xsl:with-param name="address" select="mail" /> 
  </xsl:call-template>
  <xsl:call-template name="GetDevice">
    <xsl:with-param name="commonName" select="'mobilePhone'" />  
    <xsl:with-param name="address" select="phone" /> 
  </xsl:call-template>
  <xsl:call-template name="GetDevice">
    <xsl:with-param name="commonName" select="'sms'" />  
    <xsl:with-param name="address" select="phone" /> 
  </xsl:call-template>
</xsl:element>
```
4. Save the file.
5. Run the AtHocDatIntegrator.exe file as an administrator.

For more information about using the LDAP data integration module with BlackBerry AtHoc, see the *BlackBerry AtHoc User Sync Client Guide.*
Troubleshoot issues with user synchronization

Issue:
I sent a notification, but the end users did not receive it.

Possible causes:
• The users do not exist in your BlackBerry AtHoc system.
• The users exist in the BlackBerry AtHoc system, but do not have a Username or Mapping ID attribute in their profile.
• The users exist in the BlackBerry AtHoc system, but do not have any of the selected delivery methods.

Issue:
I sent a notification to 1000 UEM users, but when I look at the notification report, it shows that the message was sent to only 990 users.

Possible cause:
• Some of your UEM users are not mapped in your BlackBerry AtHoc system. Notification reports only reflect the users in the BlackBerry AtHoc system, not users in UEM.

Issue:
I want to send myself a test notification, but do not see the Send only to me option on the New notification screen.

Possible cause:
• You are an operator in UEM, but you do not have a user profile in the BlackBerry AtHoc system.

Issue:
I can see the Notifications plug-in in the UEM console, but I cannot send notifications and I see errors when viewing settings and sent alerts.

Possible cause:
• The UEM Notifications plug-in is not installed on the UEM core server. Go to Settings > Infrastructure > Instances. Expand the BlackBerry UEM instance and view the installed plug-ins and their versions in the BlackBerry UEM - UEM Core and BlackBerry UEM - Management console rows.
Configure BlackBerry AtHoc settings in UEM

Before you begin sending messages using BlackBerry UEM Notifications, you must configure BlackBerry AtHoc settings in the UEM console.

To configure BlackBerry AtHoc settings in UEM, complete the following steps:

1. Log in to the UEM console as an administrator.
2. On the left panel select **Settings** > **BlackBerry AtHoc**. The BlackBerry AtHoc connection settings page opens.
4. Enter the BlackBerry AtHoc organization ID provided by your BlackBerry AtHoc support representative.
5. Enter the Username of an administrator user with the SDK User role in the BlackBerry AtHoc system.
6. Enter a password.
7. Click **Test connection** to verify your settings.
8. Enter the Alert Template common name provided by BlackBerry AtHoc during system provisioning.
9. Click **Verify** to validate the alert template.
10. (Optional) Enter the Client ID, Client Secret and Organization Code provided by BlackBerry AtHoc during system provisioning. These fields are required to enable UEM User Sync.
11. Click **Save**.
BlackBerry AtHoc customer portal

BlackBerry AtHoc customers can obtain more information about BlackBerry AtHoc products or get answers to questions about their BlackBerry AtHoc systems through the Customer Portal:

https://support.athoc.com/customer-support-portal.html

The BlackBerry AtHoc Customer Portal also provides support via computer-based training, operator checklists, best practice resources, reference manuals, and users guides.

WERE FORESEEN OR UNFORESEEN, AND EVEN IF BLACKBERRY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW IN YOUR JURISDICTION, BLACKBERRY SHALL HAVE NO OTHER OBLIGATION, DUTY, OR LIABILITY WHATSOEVER IN CONTRACT, TORT, OR OTHERWISE TO YOU INCLUDING ANY LIABILITY FOR NEGLIGENCE OR STRICT LIABILITY.

THE LIMITATIONS, EXCLUSIONS, AND DISCLAIMERS HEREIN SHALL APPLY: (A) IRRESPECTIVE OF THE NATURE OF THE CAUSE OF ACTION, DEMAND, OR ACTION BY YOU INCLUDING BUT NOT LIMITED TO BREACH OF CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR ANY OTHER LEGAL THEORY AND SHALL SURVIVE A FUNDAMENTAL BREACH OR BREACHES OR THE FAILURE OF THE ESSENTIAL PURPOSE OF THIS AGREEMENT OR OF ANY REMEDY CONTAINED HEREIN; AND (B) TO BLACKBERRY AND ITS AFFILIATED COMPANIES, THEIR SUCCESSORS, ASSIGNS, AGENTS, SUPPLIERS (INCLUDING AIRTIME SERVICE PROVIDERS), AUTHORIZED BLACKBERRY DISTRIBUTORS (ALSO INCLUDING AIRTIME SERVICE PROVIDERS) AND THEIR RESPECTIVE DIRECTORS, EMPLOYEES, AND INDEPENDENT CONTRACTORS.

IN ADDITION TO THE LIMITATIONS AND EXCLUSIONS SET OUT ABOVE, IN NO EVENT SHALL ANY DIRECTOR, EMPLOYEE, AGENT, DISTRIBUTOR, SUPPLIER, INDEPENDENT CONTRACTOR OF BLACKBERRY OR ANY AFFILIATES OF BLACKBERRY HAVE ANY LIABILITY ARISING FROM OR RELATED TO THE DOCUMENTATION.

Prior to subscribing for, installing, or using any Third Party Products and Services, it is your responsibility to ensure that your airtime service provider has agreed to support all of their features. Some airtime service providers might not offer Internet browsing functionality with a subscription to the BlackBerry® Internet Service. Check with your service provider for availability, roaming arrangements, service plans and features. Installation or use of Third Party Products and Services with BlackBerry's products and services may require one or more patent, trademark, copyright, or other licenses in order to avoid infringement or violation of third party rights. You are solely responsible for determining whether to use Third Party Products and Services and if any third party licenses are required to do so. If required you are responsible for acquiring them. You should not install or use Third Party Products and Services until all necessary licenses have been acquired. Any Third Party Products and Services that are provided with BlackBerry’s products and services are provided as a convenience to you and are provided "AS IS" with no express or implied conditions, endorsements, guarantees, representations, or warranties of any kind by BlackBerry and BlackBerry assumes no liability whatsoever, in relation thereto. Your use of Third Party Products and Services shall be governed by and subject to you agreeing to the terms of separate licenses and other agreements applicable thereto with third parties, except to the extent expressly covered by a license or other agreement with BlackBerry.

The terms of use of any BlackBerry product or service are set out in a separate license or other agreement with BlackBerry applicable thereto. NOTHING IN THIS DOCUMENTATION IS INTENDED TO SUPERSEDE ANY EXPRESS WRITTEN AGREEMENTS OR WARRANTIES PROVIDED BY BLACKBERRY FOR PORTIONS OF ANY BLACKBERRY PRODUCT OR SERVICE OTHER THAN THIS DOCUMENTATION.
