BlackBerry Connectivity app for BlackBerry 10 - Release Notes MR 1.4.0.234

New in this release

The BlackBerry Connectivity app (previously named the BES12 Secure Connect Plus app) is required for devices to use the BlackBerry Secure Connect Plus feature in BlackBerry UEM and BES12. BlackBerry Secure Connect Plus is supported for BlackBerry 10 OS version 10.3.2 or later. For more information about enabling and using BlackBerry Secure Connect Plus, see ["Using enterprise connectivity and BlackBerry Secure Connect Plus for connections to work resources" in the Administration content](#). The BlackBerry Connectivity app supports TLS 1.2 and DTLS 1.0.

This maintenance release of the app (version 1.4.0.234) for BlackBerry 10 devices includes a fix that ensures both server-side and client-side transcoder instances are provided with the same device identifier.

Before users upgrade to BlackBerry 10 10.3.3, use one of the following methods to update the BlackBerry Connectivity app on users' devices to leverage the latest improvements:

- Upgrade to BlackBerry UEM version 12.6. The app is included in this release and is distributed to BlackBerry 10 devices automatically after the upgrade completes.
- If you are not ready to upgrade BES12 to BlackBerry UEM version 12.6, follow the instructions in [Update the hidden BlackBerry Connectivity app on BlackBerry 10 devices](#).

The app is hidden on BlackBerry 10 devices and does not require user interaction.

This maintenance release also includes the following improvements from the previous maintenance releases of the app:

Update the hidden BlackBerry Connectivity app on BlackBerry 10 devices

Before you begin:

- To verify the version of the app that is currently distributed in your domain, navigate to `<drive>\Program Files\BlackBerry\BES\Core\system.app\reactivation` and check the version of **sys.p2evpn-<version>-signed.bar**. If your organization uses BlackBerry UEM, the file is located at `<drive>\Program Files\BlackBerry\UEM\Core\system.app\reactivation`.
- Visit [BlackBerry software downloads](#) to download the latest version of the UEM Configuration Tool and the .bar file for the BlackBerry Connectivity app (sys.p2evpn-1.4.0.234-signed.bar). Save the files on each computer that hosts a BES12 (or BlackBerry UEM) instance.

Complete the following steps on each computer that hosts a BES12 (or BlackBerry UEM) instance:

1. Run the UEM Configuration Tool as an administrator.
2. Click **Next**.
3. Select the appropriate country and language and review the license agreement. Accept the license agreement and click **Next**.
4. Click **Update system apps**. Click **Next**.
5. If necessary, specify the database information. Click **Validate**.
6. Click **Next**.
7. Under **Select the new BlackBerry Connectivity app for BlackBerry 10 devices**, click the browse button. Navigate to and select the .bar file for the app (sys.p2evpn-1.4.0.234-signed.bar).
8. Click **Update**.
9. In the Windows Services, restart the **BES12 - BES12 Core** service. If your organization uses BlackBerry UEM, the service is named **BlackBerry UEM - UEM Core**.

On BlackBerry 10 devices that have an enterprise connectivity profile with BlackBerry Secure Connect Plus enabled, BES12 (or BlackBerry UEM) automatically updates the BlackBerry Connectivity app.
